What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Graphical user interface, text, application, table Description automatically generated

NEW QUESTION # 25

You need to identify the strategy for each application lifecycle management (ALM) component.

Which strategy should you use for each ALM component? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 26

A company uses Dynamics 365 Supply Chain Management. The company has offices in several geographic regions.

Users must only be allowed to access the system from IP addresses that are associated with the regions where the company has offices.

You need to set up security for the company.

What should you set up?

- A. Azure Active Directory Conditional Access
- B. Security policy
- C. Assign user roles
- D. Enable Session management
- E. Extensible Data Security policies (XDS)

Answer: A

Explanation:

You can limit access to users with block access by location to reduce unauthorized access. By using Conditional Access policies, you can apply the right access controls when needed to help keep your organization secure and stay out of your user's way when not needed. Conditional Access analyses signals such as user, device, and location to automate decisions and enforce organizational access policies for resources.

For example, when location restrictions are set in a user's profile and the user tries to sign in from a blocked location, access to customer engagement apps (Dynamics 365 Sales, Dynamics 365 Customer Service, Dynamics 365 Field Service, Dynamics 365 Marketing, Dynamics 365 Project Service Automation), and Finance and Operations apps are denied.

NEW QUESTION # 27

You are an architect implementing Dynamics 365.

The Dynamics 365 administrator who manages deployments of components leaves the company. Microsoft Azure DevOps pipelines

You need to recommend which Microsoft Azure DevOps pipeline tasks to use to meet the requirements. What should you recommend? To answer, select the appropriate options in the answer area.
