we guarantee to you that our C_BCBDC_2505 study questions are of high quality and can help you pass the exam easily and successfully. Our C_BCBDC_2505 exam questions boosts 99% passing rate and high hit rate so you needn't worry that you can't pass the exam. Our C_BCBDC_2505 Exam Torrent is compiled by experts and approved by experienced professionals and updated according to the development situation in the theory and the practice. Our C_BCBDC_2505 guide torrent can simulate the exam and boosts the timing function.

SAP C_BCBDC_2505 Exam Syllabus Topics:

Topic	Details
Topic 1	SAP Datasphere: This section of the exam measures the skills of Solution Consultants and covers a comprehensive understanding of SAP Datasphere. Candidates should demonstrate knowledge of data modeling, transformation, and harmonization using SAP Datasphere tools. It evaluates how well they can work with data layer structuring, semantic modeling, and integration to support real-time data access for various business applications.

Topic 2	• SAP Business Data Cloud: This section of the exam measures the skills of Data Analysts and covers core concepts of the SAP Business Data Cloud. Candidates are expected to understand its key components, integration mechanisms, and how it functions as a foundation for unified data management across SAP and non-SAP environments. The focus is on enabling data connectivity and providing governed access to data across the enterprise.
Topic 3	• SAP Analytics Cloud: This section of the exam measures the skills of Data Analysts and covers the use of SAP Analytics Cloud in data visualization, story building, and dashboard creation. Candidates should be familiar with its planning and predictive capabilities, along with how to utilize data insights to drive business decision-making. It also includes managing user access and collaborating through shared analytics assets.

SAP Certified Associate - SAP Business Data Cloud Sample Questions (Q20-Q25):

NEW QUESTION # 20

Which of the following data source objects can be used for an SAP Datasphere Replication Flow? Note: There are 2 correct answers to this question.

- A. MS Azure SQL table
- B. Google Big Query dataset
- C. Oracle database table
- D. ABAP CDS view

Answer: C,D

Explanation:

SAP Datasphere Replication Flows are designed for efficient and continuous data transfer from source systems into Datasphere. For these flows, specific types of data source objects are supported to ensure robust and reliable replication. Two common and highly supported data source objects are an ABAP CDS view (Core Data Services view) and an Oracle database table. ABAP CDS views are particularly relevant for replicating data from SAP source systems (like SAP S/4HANA or SAP ERP), as they provide a semantically rich and optimized way to access business data. Oracle database tables represent a broad category of third-party relational databases from which data can be replicated. While Datasphere offers connectivity to various cloud data warehouses like Google BigQuery or MS Azure SQL for virtual access or snapshotting, Replication Flows are typically used for continuous, high-volume data ingestion from operational databases and SAP systems using their native database tables or views like CDS views.

NEW QUESTION # 21

In the SAP Analytics Cloud Catalog, what access do you have to the files?

Please choose the correct answer.

Response:

- A. Edit
- B. View
- C. Read/Write

Answer: B
