NEW QUESTION # 25

How does the integration between SAP Signavio and SAP LeanIX enhance IT and business alignment?

- A. The tools only provide visualization without actionable insights.
- B. Business processes are directly controlled by SAP LeanIX applications.
- C. The integration allows linking of business applications to business processes.
- D. Integration solely enhances reporting capabilities.

Answer: C

Explanation:

The integration between SAP Signavio and SAP LeanIX provides a unified view of business and IT, allowing companies to connect business processes (Signavio) with IT applications and systems (LeanIX). This integration bridges operational and architectural perspectives, ensuring full alignment between business goals and IT capabilities.

"Through the SAP Signavio and SAP LeanIX integration, organizations can link business processes to supporting IT applications, creating a shared view that strengthens IT-business alignment." Reference:

This integration supports transformation governance by combining process intelligence (what the business does) with enterprise architecture insights (how IT supports it).

"SAP enables enterprises to visualize dependencies between processes and applications, ensuring coordinated decision-making and improved transformation outcomes." Incorrect Options:

A: Reporting is a secondary feature; integration focuses on alignment, not reporting alone.

B: Both tools provide actionable insights via analytics and process intelligence.

C: LeanIX does not "control" processes; it maps IT dependencies and applications.

Verified Correct answer: D: The integration allows linking of business applications to business processes.

- **D. Lack of transparency into processes and system landscapes**
- **E. Not knowing how and where to start their transformation journey**

Answer: B,D,E

Explanation:
