Just have a try, and you will benefit a lot.

SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud

Public Edition, Sourcing and Procurement Sample Questions (Q56-Q61):

NEW QUESTION # 56

What are the key process flows of service procurement? Note: There are 3 correct answers to this question.

- A. Manage invoices
- B. Manage purchase orders
- C. Manage service contracts
- D. Manage service entry sheets
- E. Maintain quota arrangements

Answer: A,B,D

Explanation:

Service procurement involves specific process flows that ensure the proper acquisition and management of services. Below is an explanation of the correct answers:

* Manage invoices (A): Invoicing is a critical step in service procurement, where the supplier submits an invoice for the services rendered. This process ensures accurate payment based on agreed terms.

* Manage purchase orders (B): Purchase orders are used to formally request services from a supplier. They define the scope, terms, and conditions of the service procurement.

* Manage service entry sheets (C): Service entry sheets are used to confirm the completion of services by the supplier. They serve as a basis for invoice verification and payment.

* Manage service contracts (D): While service contracts are important for long-term agreements, they are not part of the standard service procurement process flows.

* Maintain quota arrangements (E): Quota arrangements are used for material procurement to allocate sources of supply and are not relevant to service procurement.

NEW QUESTION # 57

Where are the manual test cases created for customer User Acceptance Testing?

- A. SAP Cloud ALM
- B. SAP Signavio Process Navigator
- C. Test Automation Tool
- D. SAP Solution Manager

Answer: A

Explanation:

Manual test cases for customer User Acceptance Testing (UAT) are created in SAP Cloud ALM (Application Lifecycle Management), which is a cloud-based tool designed to support testing and quality assurance processes. Below is an explanation of the correct answer:

* SAP Cloud ALM (A): SAP Cloud ALM provides a centralized platform for managing test cases, test plans, and execution results. It enables customers to create, organize, and execute manual test cases during UAT to ensure that business processes meet requirements.

* SAP Signavio Process Navigator (B): SAP Signavio Process Navigator is used for process modeling and documentation, not for creating or executing test cases.

* SAP Solution Manager (C): While SAP Solution Manager supports testing, it is primarily used for on-premise systems and is not the recommended tool for SAP S/4HANA Cloud Public Edition.

* Test Automation Tool (D): Test automation tools focus on automated testing rather than manual test case creation for UAT.

NEW QUESTION # 58

How can you create an inbound delivery in your S/4HANA Cloud system? Note: There are 3 correct answers to this question.

- A. Manually, with reference to the purchase order
- B. Automatically, by creating a supplier invoice with a scheduled job

- C. Manually, with reference to the post goods receipt
- D. Automatically, by receiving an advanced shipping notification from the vendor electronically
- E. Automatically, generated based on the purchase order data by a background job

Answer: A,C,D

NEW QUESTION # 59

Which organizational units are categories of the business partner master data that is relevant for business partner roles Supplier and Supplier (Fin. Accounting)? Note: There are 2 correct answers to this question.

- A. Personnel Sub Area data
- B. Company code data
- C. Country data
- D. Purchasing organization data

Answer: B,D

NEW QUESTION # 60

When do you specify the data retention period in the SAP S/4HANA Migration Cockpit?

- A. When the project status is "Finished"
- B. When the project status is "In Progress"
- C. When the project status is "Not Started"
- D. When the project status is "Completed"

Answer: A

Explanation:

In the SAP S/4HANA Migration Cockpit, the data retention period is specified when the project status is marked as "Finished." This ensures that all migration data is retained for a defined period after the migration project is completed, allowing for audits or troubleshooting if needed. Below is an explanation:

- * When the project status is "Finished" (B): Once the migration project is completed and marked as "Finished," the system prompts you to define the data retention period. This step ensures compliance with data governance policies and allows for potential re-use of migration objects in future projects.
- * When the project status is "Completed" (A): The "Completed" status typically indicates that the migration process has been executed but does not trigger the data retention configuration.
- * When the project status is "In Progress" (C): During the "In Progress" phase, the focus is on uploading, validating, and migrating data, not on defining retention periods.
- * When the project status is "Not Started" (D): At this stage, the migration project has not yet begun, so retention settings are irrelevant.
