tested our influence and charisma on this career. You will find that our they are the best choice to your time and money. Our DA0-001 Study Dumps have been prepared with a mind to equip the exam candidates to answer all types of DA0-001 real exam Q&A. For the purpose,DA0-001 test prep is compiled to keep relevant and the most significant information that you need.

CompTIA Data+ Certification Exam Sample Questions (Q265-Q270):

NEW QUESTION # 265

A data analyst needs to create a data visualization that aids in un the cumulative impact of sequentially introduced values that are positive or negative. Which of the following data visualization methods should the analyst use?

- A. A line chart
- B. A bubble chart
- C. A waterfall chart
- **D. A scatter plot**

Answer: D

NEW QUESTION # 266

An analyst is designing a dashboard to determine which site has the highest percentage of new customers. The analyst must choose an appropriate chart to include in the dashboard. The following data is available:

| Site | Customers | New customers | Percentage of new customers |
|------|-----------|---------------|-----------------------------|
| A1 | 2236 | 277 | 12% |
| A2 | 885 | 300 | 34% |
| A3 | 333 | 200 | 60% |
| B1 | 483 | 167 | 35% |
| B2 | 2969 | 235 | 8% |
| B3 | 2357 | 153 | 6% |
| C1 | 1524 | 180 | 12% |
| C2 | 878 | 150 | 17% |
| C3 | 1925 | 142 | 7% |

Which of the following types of charts should be considered to BEST display the data?

- A. Include a line chart using the site and the percentage of new customers data.
- B. Include a pie chat using the site and percentage of new customers data.
- **C. Include a bar chart using the site and the percentage of new customers data.**
- D. Include a scatter chart using the site and the percent of new customers data.

Answer: C

Explanation:

This is because a bar chart is a type of chart that shows the value or the amount of a single variable for different categories or groups, such as the percentage of new customers for different sites in this case. A bar chart can be used to display and analyze the comparison, ranking, or proportion among the categories or groups, as well as identify any differences, similarities, or outliers in the data. For example, a bar chart can show which site has the highest or lowest percentage of new customers, as well as show how much each site contributes to the total percentage of new customers. The other types of charts are not the best charts to display the data. Here is why:

* A line chart is a type of chart that shows the change or the trend of a single variable over time, such as the percentage of new customers over months or years in this case. A line chart can be used to display and analyze the movement, cycle, or pattern of the variable, as well as identify any peaks, valleys, or fluctuations in the data. For example, a line chart can show how the percentage of new customers increases or decreases over time, as well as show if there are any seasonal or periodic variations in the data.

* A pie chart is a type of chart that shows the proportion or the percentage of a single variable for different categories or groups, such as the percentage of new customers for different sites in this case. A pie chart can be used to display and analyze the composition, distribution, or share of the variable, as well as identify any segments, slices, or fractions in the data. For example, a pie chart can show how much each site represents of the total percentage of new customers, as well as show if there are any dominant or minor sites in the data.

* A scatter chart is a type of chart that shows the relationship between two variables for each observation or unit in a data set, such as the percentage of new customers and another variable for each site in this case. A scatter chart can be used to display and analyze the correlation, trend, or pattern among the variables, as well as identify any outliers or clusters in the data. For example, a scatter chart can show if there is a positive, negative, or no correlation between the percentage of new customers and another variable, such as sales revenue or customer satisfaction.

NEW QUESTION # 267

A data analyst is asked on the morning of April 9, 2020, to create a sales report that identifies sales year to date. The daily sales data is current through the end of the day. Which of the following date ranges should be on the report?

- A. January 1, 2020 to April 7, 2020
- B. January 1, 2020 to April 8, 2020
- C. January 1, 2020 to April 9, 2020
- D. January 1, 2020 to April 1, 2020

Answer: C

Explanation:

Explanation

This is because sales year to date refers to the sales that have occurred from the beginning of the current year until the current date. By creating a sales report that identifies sales year to date, the analyst can measure and compare the sales performance and progress of the current year. Since the analyst is asked to create the sales report on the morning of April 9, 2020, and the daily sales data is current through the end of the day, the date range that should be on the report is January 1, 2020 to April 9, 2020. The other date ranges are not correct for identifying sales year to date. Here is why:

January 1, 2020 to April 1, 2020 would not include the sales that occurred in the first eight days of April, which would underestimate the sales year to date.

January 1, 2020 to April 7, 2020 would not include the sales that occurred in the last two days of April, which would also underestimate the sales year to date.

January 1, 2020 to April 8, 2020 would not include the sales that occurred on April 9, which would also underestimate the sales year to date.

NEW QUESTION # 268

Which of the ing is the correct ion for a tab-delimited spre file?

- A. az
- B. tap
- C. tar
- D. sv

Answer: D

Explanation:

A tab-delimited spreadsheet file is a type of flat text file that uses tabs as delimiters to separate data values in a table. The file extension for a tab-delimited spreadsheet file is usually .tsv, which stands for tab-separated values. Therefore, the correct answer is C. Reference: [Tab-separated values - Wikipedia], [What is a TSV File? | How to Open, Edit & Convert TSV Files]

NEW QUESTION # 269

A dataset requires an analysis for investigating and discovering abnormalities. Which of the following best describes the nature of the exploratory analysis conducted?

- A. Method of checking the quality of the data
- B. Best data tuning method
- C. Set of methods for cleaning the data
- D. Summary of the data's main characteristics

Answer: D

Explanation:

Exploratory Data Analysis (EDA) is a technique used to summarize the main characteristics of a dataset. It often involves using graphical representations and statistical summaries to uncover patterns, relationships, and anomalies in the data. Analysts perform EDA to detect outliers, missing values, and trends before proceeding with deeper data processing and modeling.

NEW QUESTION # 270

.....

In order to meet the need of all customers, there are a lot of professionals in our company. We can promise that we are going to provide you with 24-hours online efficient service after you buy our CompTIA Data+ Certification Exam guide torrent. We are willing to help you solve your all problem. If you purchase our DA0-001 test guide, you will have the right to ask us any question about our products, and we are going to answer your question immediately, because we hope that we can help you solve your problem about our DA0-001 Exam Questions in the shortest time. We can promise that our online workers will be online every day. If you buy our DA0-001 test guide, we can make sure that we will offer you help in the process of using our DA0-001 exam questions. You will have the opportunity to enjoy the best service from our company.
