

Latest Updated Salesforce Visual Data-Architect Cert Test: Salesforce Certified Data Architect | New Data-Architect Exam Preparation

BONUS!!! Download part of ActualTestsQuiz Data-Architect dumps for free: <https://drive.google.com/open?id=18VwOHtcB9hzW5gMB06ki2Cnp65DZXFdU>

Our Data-Architect practice questions are on the cutting edge of this line with all the newest contents for your reference. Free demos are understandable and part of the Data-Architect exam materials as well as the newest information for your practice. And because that our Data-Architect Study Guide has three versions: the PDF, Software and APP online. So accordingly, we offer three versions of free demos for you to download.

To qualify for this certification exam, candidates must have a minimum of 3-5 years of experience in data architecture, as well as a deep understanding of the Salesforce platform and its data model. Data-Architect exam itself consists of multiple-choice questions and scenario-based questions, which are designed to test the candidate's knowledge and ability to apply best practices in data architecture to real-world scenarios. Once certified, professionals will have the skills and knowledge necessary to design and implement complex data solutions that can help organizations better understand their customers, improve their sales and marketing efforts, and drive business growth. Overall, the Salesforce Data-Architect Certification is a valuable credential for any data professional looking to advance their career in the Salesforce ecosystem.

Salesforce Data-Architect certification is highly valued in the industry, as it demonstrates the candidate's ability to design and manage complex data solutions on the Salesforce platform. It is a highly specialized certification that requires a deep understanding of Salesforce data architecture principles and best practices, as well as hands-on experience in implementing data solutions in real-world scenarios.

New Data-Architect Exam Preparation, Data-Architect Pdf Torrent

If you think that Data-Architect certification exam is easy to crack, you are mistaken. It takes a lot of effort and hard work to get the results. The first step is to download real Salesforce Certified Data Architect (Data-Architect) Exam Questions of ActualTestsQuiz. These Salesforce Certified Data Architect (Data-Architect) exam questions are available in PDF, desktop practice test software,

and web-based practice exam.

Salesforce Data-Architect (Salesforce Certified Data Architect) Exam is a highly sought-after certification for professionals working in the Salesforce ecosystem. Data-Architect exam is designed to test a candidate's knowledge and expertise in designing and implementing complex data solutions on the Salesforce platform. Salesforce Certified Data Architect certification emphasizes the importance of data modelling, data governance, data integration, and data migration in Salesforce.

Salesforce Certified Data Architect Sample Questions (Q194-Q199):

NEW QUESTION # 194

UC is using SF CRM. UC sales managers are complaining about data quality and would like to monitor and measure data quality. Which 2 solutions should a data architect recommend to monitor and measure data quality?
Choose 2 answers.

- A. Export data and check for data completeness outside of Salesforce.
- **B. Install and run data quality analysis dashboard app**
- **C. Review data quality reports and dashboards.**
- D. Use custom objects and fields to identify issues.

Answer: B,C

NEW QUESTION # 195

UC is trying to switch from legacy CRM to salesforce and wants to keep legacy CRM and salesforce in place till all the functionality is deployed in salesforce. The want to keep data in synch b/w Salesforce, legacy CRM and SAP. What is the recommendation.

- A. Integrate legacy CRM to salesforce and keep data in synch till new functionality is in place
- B. Do not integrate legacy CRM to Salesforce, but integrate salesforce to SAP
- **C. Integrate SAP with Salesforce, SAP to legacy CRM but not legacy CRM to Salesforce**
- **D. Suggest MDM solution and link MDM to salesforce and SAP**

Answer: C,D

NEW QUESTION # 196

Universal Containers (UC) has a custom discount request object set as a detail object with a custom product object as the master. There is a requirement to allow the creation of generic discount requests without the custom product object as its master record. What solution should an Architect recommend to UC?

- A. Mandate the selection of a custom product for each discount request.
- B. Create a placeholder product record for the generic discount request.
- C. Remove the master-detail relationship and keep the objects separate.
- **D. Change the master-detail relationship to a lookup relationship.**

Answer: D

NEW QUESTION # 197

Universal Containers (UC) wants to store product data in Salesforce, but the standard Product object does not support the more complex hierarchical structure which is currently being used in the product master system. How can UC modify the standard Product object model to support a hierarchical data structure in order to synchronize product data from the source system to Salesforce?

- **A. Create a custom lookup field on the standard Product to reference the parent record in the hierarchy.**
- B. Create a custom master-detail field on the standard Product to reference the child record in the hierarchy.
- C. Create a custom lookup field on the standard Product to reference the child record in the hierarchy.
- D. Create an Apex trigger to synchronize the Product Family standard picklist field on the Product object.

Answer: A

Explanation:

Creating a custom lookup field on the standard Product to reference the parent record in the hierarchy is the correct way to modify

the standard Product object model to support a hierarchical data structure. This allows UC to create a self-relationship on the Product object and define parent-child relationships among products.

NEW QUESTION # 198

Universal Containers (UC) has implemented Salesforce, UC is running out of storage and needs to have an archiving solution, UC would like to maintain two years of data in Salesforce and archive older data out of Salesforce.

Which solution should a data architect recommend as an archiving solution?

- A. Build a batch job to move all records off platform, and delete all records from Salesforce.
- B. Use a third-party backup solution to backup all data off platform.
- C. Build a batch job to move all records off platform, and delete old records from Salesforce.
- **D. Build a batch job to move two-year-old records off platform, and delete records from Salesforce.**

Answer: D

Explanation:

The data architect should recommend building a batch job to move two-year-old records off platform, and delete records from Salesforce as an archiving solution. A batch job is a process that runs in the background and performs operations on large volumes of data in Salesforce. By building a batch job that moves two-year-old records off platform to an external storage system, such as Amazon S3 or Google Cloud Storage, and deletes them from Salesforce, the data architect can reduce the storage consumption and improve the performance of Salesforce org. Option A is incorrect because using a third-party backup solution to backup all data off platform will not free up any storage space in Salesforce, unless the data is also deleted from Salesforce after backup. Option B is incorrect because building a batch job to move all records off platform, and delete all records from Salesforce will result in losing all the current data in Salesforce, which may not be desirable or feasible. Option D is incorrect because building a batch job to move all records off platform, and delete old records from Salesforce does not make sense, as restore implies restoring data back to Salesforce, not moving it off platform.
