FCP_FML_AD-7.4덤프문제모음 & FCP_FML_AD-7.4인증덤프샘플 다운

ITDumpsKR의 Fortinet 인증 FCP_FML_AD-7.4시험덤프공부자료는 pdf버전과 소프트웨어버전 두가지 버전으로 제공되는데 Fortinet 인증 FCP_FML_AD-7.4실제시험예상문제가 포함되어있습니다.덤프의 예상문제는 Fortinet 인증 FCP_FML_AD-7.4실제시험의 대부분 문제를 적중하여 높은 통과율과 점유율을 자랑하고 있습니다. ITDumpsKR의 Fortinet 인증 FCP_FML_AD-7.4덤프를 선택하시면 IT자격증 취득에 더할것 없는 힘이 될것입니다.

Fortinet FCP_FML_AD-7.4 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> Initial Deployment and Basic Configuration: This section of the exam measures skills of a Network Security Administrator and covers the foundational setup of FortiMail. It includes understanding SMTP and email flow, performing initial configurations such as selecting operation mode, system settings, and defining protected domains. It also involves deploying FortiMail in high-availability clusters to ensure service continuity.
주제 2	<ul style="list-style-type: none"> Email Flow and Authentication: This section of the exam measures skills of a Messaging Security Engineer and focuses on configuring FortiMail to handle email flow securely. It includes enabling and matching authentication protocols, setting up secure MTA features, and implementing access control, IP policies, and recipient-based policies to control mail delivery and security.

주제 3	<ul style="list-style-type: none"> • Encryption: This section of the exam measures skills of a Messaging Security Engineer and addresses the implementation of encryption methods in FortiMail. It covers traditional SMTP encryption and identity-based encryption (IBE). Candidates are expected to configure these technologies and manage IBE users for secure email communication.
주제 4	<ul style="list-style-type: none"> • Email Security: This section of the exam measures skills of a Network Security Administrator and deals with implementing security controls to filter and manage email threats. Candidates must configure session-based filtering, spam detection methods, malware protection, APT mitigation, and content filtering. The section also includes email archiving configurations for compliance and storage.
주제 5	<ul style="list-style-type: none"> • Server Mode and Transparent Mode: This section of the exam measures skills of a Network Security Administrator and explains how to deploy and manage FortiMail in different operation modes. It includes configuring server mode to handle mail directly and deploying FortiMail in transparent mode where it acts as a gateway to filter email traffic without altering the existing mail infrastructure.

최신 FCP in Public Cloud Security FCP_FML_AD-7.4 무료 샘플문제 (Q54-Q59):

질문 # 54

Refer to the exhibit, which shows an inbound recipient policy.

After creating the policy shown in the exhibit, an administrator discovers that clients can send unauthenticated emails using SMTP. What must the administrator do to enforce authentication?

- A. Move this incoming recipient policy to the top of the list.
- B. Configure an access delivery rule to enforce authentication.
- C. Configure an access receive rule to verify authentication status.
- D. Configure a matching IP policy with the exclusive flag enabled.

정답: C

질문 # 55

Refer to the exhibit, which shows the Authentication Reputation list on a FortiMail device running in gateway mode.

Why was the IP address blocked?

- A. The IP address had consecutive IMAP login failures to FortiMail.
- B. The IP address had consecutive SSH login failures to FortiMail.
- C. The IP address had consecutive SMTPS login failures to FortiMail.
- D. The IP address had consecutive administrative password failures to FortiMail.

정답: C

설명:

Because the device's Authentication Reputation list shows a "Mail" violation and is blocking mail access (along with CLI and Web), it indicates repeated failures of the mail-protocol login. In gateway mode FortiMail only tracks SMTP (SMTPS) authentication failures under the "Mail" category, not IMAP, so consecutive SMTPS login failures triggered the block.

질문 # 56

Which SMTP command lists the supported SMTP service extensions of the recipient MTA?

- A. HELO
- B. VRFY
- C. DATA
- D. EHLO

정답: C

질문 # 57

Refer to the exhibits, which shows a DLP scan profile configuration (DLP Scan Rule 1 and DLP Scan Rule 2) from a FortiMail device.

Which two message types will trigger this DLP scan rule? (Choose two.)

- A. An email sent from sales@internal.lac will trigger this scan rule, even without matching any conditions.
- B. An email message that contains credit card numbers in the body will trigger this scan rule.
- C. An email message with a subject that contains the term 'credit card' will trigger this scan rule.
- D. An email that contains credit card numbers in the body, attachment, and subject will trigger this scan rule.

정답: B,C

질문 # 58

In which two ways does a transparent mode FortiMail use the build-it MTA to process email?

(Choose two.)

- A. MUAs must be configured to connect to the built-in MTAs to send email.
- B. The built-in MTA must connect to an external relay host to deliver email.
- C. It ignores the destination set by the sender and uses its own MX record lookup.
- D. It can queue undeliverable messages and generate DSNs.

정답: C,D

설명:

It ignores the destination set by the sender and uses its own MX record lookup.

In transparent mode FortiMail intercepts mail and then its built-in MTA performs an MX lookup on the recipient domain rather than trusting the original destination hop.

It can queue undeliverable messages and generate DSNs.

The built-in MTA maintains delivery queues and produces Delivery Status Notifications when downstream delivery fails.

질문 # 59
