### NEW QUESTION # 127

You need to set up the metal production route and BOM.

Which three actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Set the operation route type as Standard.
- B. Set all the BOM lines to resource consumption.
- C. Set all BOM lines warehouse to the production warehouse.
- D. Set the input warehouse on the resource to the vendor warehouse.
- E. Set the operation route type as Vendor.

Answer: C,D,E

### NEW QUESTION # 128

You are configuring the production floor execution interface in Dynamics 365 Supply Chain Management.

The current configuration of the production floor execution interface hinders efficient production floor operations and impedes

worker productivity.

You need to optimize the production floor execution interface configuration.

What should you do?

- A. Activate Allow locking the touchscreen and then specify a Screen lock duration.
- B. Select specific tabs to display in the production floor execution interface.
- C. Enable Use the actual time of registration and Single worker.
- **D. Deactivate Use the actual time of registration and Single worker.**

**Answer: D**

#### NEW QUESTION # 129

A Discrete manufacturing company produces speakers. The high-end speaker model uses protective rubber strips on the edges.

Approximately five inches of rubber is consistently scrapped in the production process, regardless of production quantity. Workers manually consume the extra material on the picking list or scrap it in an inventory journal.

You need configure the system to automatically account for this scrap on the Bill of materials (BOM).

What should you do?

- **A. Set a Variable scrap of five percent for the rubber BOM line.**
- B. Set a Constant scrap of five on the BOM line for rubber.
- C. Add an additional BOM line for five inches and set consumption to Variable.
- D. Increase the required quantity of the rubber component by five on the BOM.

**Answer: A**

#### NEW QUESTION # 130

A company uses Discrete manufacturing concepts to produce cables. The company's production scheduler uses internal documents to track issues on in-process production orders.

The production scheduler must group all in-process production orders according to issues. The scheduler must be able to easily determine issues with production orders.

You need to implement a method to easily identify production orders with issues.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

⋮ Add a note to the BOM and list the issue of the production order.
⋮ Create an item group for issues.
⋮ Add the item group to the production order.
⋮ Create a production pool for issues.
⋮ Add the production pool to the production order.
⋮ Filter the production orders by production pool.

Answer Area

**Answer:**

Explanation:

ACTIONS

⋮ Add a note to the BOM and list the issue of the production order.
⋮ Create an item group for issues.
⋮ Add the item group to the production order.
⋮ Create a production pool for issues.
⋮ Add the production pool to the production order.
⋮ Filter the production orders by production pool.

Answer Area

⋮ Create a production pool for issues.
⋮ Add the production pool to the production order.
⋮ Filter the production orders by production pool.

The screenshot shows the SAP Fiori 'Production Order' app interface. On the left, the 'Actions' panel contains three items: 'Add a note to the BOM and list the issue of the production order.', 'Create an item group for issues.', and 'Add the item group to the production order.'. On the right, the 'Answer Area' displays a list of three items: 'Create a production pool for issues.', 'Add the production pool to the production order.', and 'Filter the production orders by production pool.'. A large, semi-transparent watermark 'massleader' is overlaid diagonally across the center of the image.
