

Exam Microsoft AI-900 Tests, AI-900 Test Practice

P.S. Free & New AI-900 dumps are available on Google Drive shared by Real4exams: <https://drive.google.com/open?id=1ntD9sbI81hj26dZx9-BVsntKEgfmLEp>

In modern society, everything is changing so fast with the development of technology. If you do not renew your knowledge and skills, you will be wiped out by others. Our AI-900 guide materials also keep up with the society. After all, new technology has been applied in many fields. So accordingly our AI-900 Exam Questions are also applied with the latest technologies to be up to date. You can free download the demos to check that how wonderful our AI-900 learning preparation is!

Microsoft AI-900 Exam is an entry-level certification exam that does not require any prerequisites. However, candidates should have a basic understanding of cloud computing and Microsoft Azure. AI-900 exam consists of 40-60 multiple-choice questions, and candidates have 60 minutes to complete it. Upon passing the exam, candidates will receive the Microsoft Certified: Azure AI Fundamentals certification, which is a valuable credential in the AI industry.

AI-900 Test Practice | AI-900 Download Free Dumps

Real4exams is a leading platform that has been helping the Microsoft AI-900 exam candidates for many years. Over this long time period, countless Microsoft AI-900 exam candidates have passed their dream Microsoft Azure AI Fundamentals (AI-900) certification and they all got help from valid, updated, and Real AI-900 Exam Questions. So you can also trust the top standard of Microsoft AI-900 exam dumps and start AI-900 practice questions preparation without wasting further time.

The Microsoft AI-900 exam covers a range of topics, including AI workloads and considerations, fundamental concepts of machine learning, data science processes, and Azure AI services. Candidates will be tested on their ability to identify Azure AI services, understand their features and benefits, and know how to use them to solve business problems. AI-900 exam also includes questions on the ethical and legal considerations involved in AI and ML, such as privacy, transparency, and accountability.

Microsoft AI-900 Certification Exam is an excellent starting point for individuals who are interested in pursuing a career in AI or who want to demonstrate their expertise in the field. It covers a wide range of topics related to AI and the Azure platform and provides a valuable credential that can help individuals stand out in the job market.

Microsoft Azure AI Fundamentals Sample Questions (Q98-Q103):

NEW QUESTION # 98

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
The Custom Vision service can be used to detect objects in an image.	<input type="radio"/>	<input type="radio"/>
The Custom Vision service requires that you provide your own data to train the model.	<input type="radio"/>	<input type="radio"/>
The Custom Vision service can be used to analyze video files.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Statements	Yes	No
The Custom Vision service can be used to detect objects in an image.	<input checked="" type="radio"/>	<input type="radio"/>
The Custom Vision service requires that you provide your own data to train the model.	<input checked="" type="radio"/>	<input type="radio"/>
The Custom Vision service can be used to analyze video files.	<input type="radio"/>	<input checked="" type="radio"/>

NEW QUESTION # 99

To complete the sentence, select the appropriate option in the answer area.

Answer Area

is used to generate additional features

- Feature engineering
- Feature selection
- Model evaluation
- Model training

Answer:

Explanation:

Answer Area

is used to generate additional features

- Feature engineering
- Feature selection
- Model evaluation
- Model training

Explanation:

Answer Area

is used to generate additional features.

- Feature engineering
- Feature selection
- Model evaluation
- Model training

NEW QUESTION # 100

Match the principles of responsible AI to appropriate requirements.

To answer, drag the appropriate principles from the column on the left to its requirement on the right. Each principle may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Principles	Answer Area
Fairness	The system must not discriminate based on gender, race
Privacy and security	Personal data must be visible only to approve
Reliability and safety	Automated decision-making processes must be recorded so that approved users can identify why a decision was made
Transparency	

Answer:

Explanation:

Principles	Answer Area
Fairness	The system must not discriminate based on gender, race
Privacy and security	Personal data must be visible only to approve
Reliability and safety	Automated decision-making processes must be recorded so that approved users can identify why a decision was made
Transparency	

Explanation

Graphical user interface, text, application, email Description automatically generated

Fairness	The system must not discriminate based on gender, race
Privacy and security	Personal data must be visible only to approve
Transparency	Automated decision-making processes must be recorded so that approved users can identify why a decision was made

NEW QUESTION # 101

To complete the sentence, select the appropriate option in the answer area.
Computer vision capabilities can be Deployed to.....

Computer vision capabilities can be deployed to 

Answer:

Explanation:

Computer vision capabilities can be deployed to 

NEW QUESTION # 102

Match the Azure OpenAI large language model (LLM) process to the appropriate task.

To answer, drag the appropriate process from the column on the left to its task on the right. Each process may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Processes	Answer Area
<input type="text" value="Classifying"/>	<input type="text"/>
<input type="text" value="Generating"/>	<input type="text"/>
<input type="text" value="Summarizing"/>	<input type="text"/>
<input type="text" value="Translating"/>	<input type="text"/>

Detect the genre of a work of fiction.
Create a list of bullet points based on text input.
Create advertising slogans from a product description.

Answer:

Explanation:

Processes	Answer Area
<input type="text" value="Classifying"/>	<input type="text" value="Classifying"/>
<input type="text" value="Generating"/>	<input type="text" value="Summarizing"/>
<input type="text" value="Summarizing"/>	<input type="text" value="Generating"/>
<input type="text" value="Translating"/>	<input type="text"/>

Detect the genre of a work of fiction.
Create a list of bullet points based on text input.
Create advertising slogans from a product description.

Explanation:

Processes	Answer Area
<input type="text" value="Classifying"/>	<input type="text" value="Classifying"/>
<input type="text" value="Generating"/>	<input type="text" value="Summarizing"/>
<input type="text" value="Summarizing"/>	<input type="text" value="Generating"/>
<input type="text" value="Translating"/>	<input type="text"/>

Detect the genre of a work of fiction.
Create a list of bullet points based on text input.
Create advertising slogans from a product description.

According to the Microsoft Azure AI Fundamentals (AI-900) study material and Azure OpenAI Service documentation, large language models (LLMs) such as GPT are capable of performing multiple natural language processing (NLP) tasks depending on the

intent of the prompt. These tasks generally fall into categories like classification, generation, summarization, and translation, each with a distinct purpose and output type.

* **Classifying** - This process involves analyzing text and assigning it to a predefined category or label based on its content. The scenario "Detect the genre of a work of fiction" clearly fits this category. The model must evaluate the text and determine whether it belongs to genres like mystery, romance, or science fiction. This is a classic text classification problem, as the output is a discrete category derived from textual features.

* **Summarizing** - This process means condensing lengthy text into a shorter version that preserves the key information. In the scenario "Create a list of bullet points based on text input," the model extracts essential information and reformats it as concise bullet points, which is an abstraction form of summarization. Summarization models help users quickly understand the main ideas from long documents, meeting efficiency and readability goals.

* **Generating** - This refers to the LLM's ability to produce new, creative content based on input instructions. The task "Create advertising slogans from a product description" represents generation because it requires the model to construct original text that didn't previously exist. Generation tasks showcase the creativity and contextual fluency of models like GPT in marketing and content creation.

Thus, these mappings align directly with the Azure OpenAI LLM capabilities taught in AI-900, linking each NLP process with its most suitable real-world task.
