In recent years, some changes are taking place in this line about the new points are being constantly tested in the CompTIA Network+ Certification Exam real exam. So our experts highlight the new type of N10-009 questions and add updates into the practice materials, and look for shifts closely when they take place. As to the rapid changes happened in this N10-009 Exam, experts will fix them and we assure your N10-009 exam simulation you are looking at now are the newest version. And we only sell the latest N10-009 exam questions and answers.

If you are sure you have learnt all the N10-009 exam questions, you have every reason to believe it. VCE4Dumps's N10-009 exam dumps have the best track record of awarding exam success and a number of candidates have already obtained their targeted N10-009 Certification relying on them. They provide you the real exam scenario and by doing them repeatedly you enhance your confidence to N10-009 questions answers without any hesitation.

CompTIA Network+ Certification Exam Sample Questions (Q284-Q289):

NEW QUESTION # 284

After installing a series of Cat 8 keystones, a data center architect notices higher than normal interference during tests. Which of the following steps should the architect take to troubleshoot the issue?

- A. Connect the RX/TX wires to different pins.
- B. Run a speed test on a device that can only achieve 100Mbps speeds.
- C. Use passthrough modular crimping plugs instead of traditional crimping plugs.
- **D. Check to see if the end connections were wrapped in copper tape before terminating.**

Answer: D

Explanation:

* Importance of Proper Termination:

* Cat 8 cabling requires precise termination practices to ensure signal integrity and reduce interference. One common requirement is to wrap the end connections in copper tape to maintain shielding and reduce electromagnetic interference (EMI).

* Interference Troubleshooting:

* Interference in high-frequency cables like Cat 8 can be caused by improper shielding or grounding. Checking the end connections for proper wrapping in copper tape is a crucial step.

* Why Other Options are Less Likely:

* Passthrough modular crimping plugs: Not specifically related to interference issues and are typically used for ease of cable assembly.

* Connecting RX/TX wires to different pins: Would likely result in no connection or incorrect data transmission rather than interference.

* Running a speed test on a device that can only achieve 100Mbps speeds: This would not diagnose interference and would not provide relevant information for Cat 8 cabling rated for

* higher speeds.

* Corrective Actions:

* Verify that all end connections are properly wrapped with copper tape before termination.

* Ensure that the shielding is continuous and properly grounded throughout the installation.

* Retest the cabling for interference after making corrections.

NEW QUESTION # 285

Which of the following connector types would most likely be used to connect to an external antenna?

- A. ST
- B. LC
- C. MPO
- **D. BNC**

Answer: D

Explanation:

BNC connectors are commonly used for coaxial cables, including those connecting to external antennas in Wi-Fi, radio, and surveillance systems.

Breakdown of Options:

A: BNC - Correct answer. Used for coaxial cables in wireless and antenna connections.

B: ST - Used for fiber optic cables, not antennas.

C: LC - A fiber optic connector, not for antennas.

D: MPO - Used for multi-fiber optic cables, not RF antennas.

NEW QUESTION # 286

A company is hosting a secure web server that requires all connections to the server to be encrypted. A junior administrator needs to harden the web server. The following ports on the web server are open:

Which of the following ports should be disabled?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

For a web server that requires all connections to be encrypted, port 80 (HTTP) should be disabled. Port 80 is used for unencrypted web traffic, whereas port 443 is used for HTTPS, which provides encrypted communication.

Port 80 (HTTP): This port is used for unsecured web traffic. Disabling this port ensures that all web traffic must use HTTPS, which encrypts the data in transit.

Port 443 (HTTPS): This port is used for secure web traffic via SSL/TLS encryption. Keeping this port open ensures that secure connections can be made to the web server.

Other Ports:

Port 22: Used for SSH, providing secure remote access and file transfers.

Port 587: Used for secure email submission (SMTP) with encryption.

Network Reference:

NEW QUESTION # 287

An IT manager needs to connect ten sites in a mesh network. Each needs to be secured with reduced provisioning time. Which of the following technologies will best meet this requirement?

- A. VXLAN
- B. NFV
- C. VPN
- D. SD-WAN

Answer: D

Explanation:

* Definition of SD-WAN:

* Software-Defined Wide Area Network (SD-WAN) is a technology that simplifies the management and operation of a WAN by decoupling the networking hardware from its control mechanism. It allows for centralized management and enhanced security.

* Benefits of SD-WAN:

* Reduced Provisioning Time: SD-WAN enables quick and easy deployment of new sites with centralized control and automation.

* Security: Incorporates advanced security features such as encryption, secure tunneling, and integrated firewalls.

* Scalability: Easily scales to accommodate additional sites and bandwidth requirements.

* Comparison with Other Technologies:

* VXLAN (Virtual Extensible LAN): Primarily used for network virtualization within data centers.

* VPN (Virtual Private Network): Provides secure connections but does not offer the centralized management and provisioning efficiency of SD-WAN.

* NFV (Network Functions Virtualization): Virtualizes network services but does not specifically address WAN management and provisioning.

* Implementation:

* SD-WAN solutions are implemented by deploying edge devices at each site and connecting them to a central controller. This allows for dynamic routing, traffic management, and security policy enforcement.

NEW QUESTION # 288

A user notifies a network administrator about losing access to a remote file server. The network administrator is able to ping the server and verifies the current firewall rules do not block access to the network fileshare.

Which of the following tools would help identify which ports are open on the remote file server?

- A. Tracert
- B. nslookup
- C. Nmap
- D. Dig

Answer: C

Explanation:

Nmap (Network Mapper) is a powerful network scanning tool used to discover hosts and services on a computer network. It can be used to identify which ports are open on a remote server, which can help diagnose access issues to services like a remote file server.

* Port Scanning: Nmap can perform comprehensive port scans to determine which ports are open and what services are running on those ports.

* Network Discovery: It provides detailed information about the host's operating system, service versions, and network configuration.

* Security Audits: Besides troubleshooting, Nmap is also used for security auditing and identifying potential vulnerabilities.

Network References:

* CompTIA Network+ N10-007 Official Certification Guide: Covers network scanning tools and their uses.

* Nmap Documentation: Official documentation provides extensive details on how to use Nmap for port scanning and network diagnostics.

* Network+ Certification All-in-One Exam Guide: Discusses various network utilities, including Nmap, and their applications in network troubleshooting.
