Deep-Security-Professional試験の準備方法｜素敵なDeep-Security-Professional専門試験試験｜信頼的なTrend Micro Certified Professional for Deep Security資格認定試験

CertShiken必要な内容を収集してTrend分析し、Deep-Security-Professionalトレーニングクイズに記入することで、試験受験者の98％以上が楽かつ効率的に試験に合格しました。 Trend Micro Certified Professional for Deep Security試験に関連する学習したいすべてのメッセージは、Deep-Security-Professional練習エンジンで見つけることができます。 Trend Micro Certified Professional for Deep Security環境で行われた変更および次の試験での予測は、それらによって以前にコンパイルされます。

Trend Micro Certified Professional for Deep Security 認定 Deep-Security-Professional 試験問題 (Q74-Q79):

質問 # 74
Which of the following are valid methods for pre-approving software updates to prevent Ap-plication Control Events from being triggered by the execution of the modified software? Select all that apply.

- A. Software updates performed by a Trusted Updater will be automatically approved.

- B. Once the inventory scan has run when Application Control is first enabled, there is no way to update the inventory to incorporate modified software.
- C. Edit the inventory database file (AC.db) on the Agent computer to include the hash of the newly updated software. Save the change and restart the Deep Security Agent. The software updates will now be approved.
- D. Maintenance mode can be enabled while completing the updates.

正解：A、D

解説：
Normally, you will want Application Control to alert you when there are any unexpected software updates. However, some updates are expected and you will need provide allowances for these up-dates. Two methods for pre-approving software updates includes maintenance mode and trusted installers.
Explication: Study Guide - page (303-304)

質問＃75
Which of the following statements is true regarding the Intrusion Prevention Protection Module?

- A. The Intrusion Prevention Protection Module can identify changes applied to protected objects, such as the Hosts file, or the Windows Registry.
- B. The Intrusion Prevention Protection Module analyzes the payload within incoming and outgoing data packets to identify content that can signal an attack.
- C. The Intrusion Prevention Protection Module can prevent applications from executing, allowing an organization to block unallowed software.
- D. The Intrusion Prevention Protection Module blocks or allows traffic based on header information within data packets.

正解：B

解説：
The Intrusion Prevention Module (IPS) performs deep packet inspection, examining both the headers and payload of network packets to detect and block exploits, malware, and other threats. It is not limited to header analysis and is not responsible for file integrity or application control.
From the official documentation:
"The Intrusion Prevention module inspects the payload and headers of network traffic to detect and block exploits and attacks. It uses deep packet inspection techniques to identify malicious content and suspicious patterns in network data." Option B is correct.
Option A is only partially true (IPS looks at more than just headers).
Option C is handled by Integrity Monitoring, not IPS.
Option D is handled by Application Control, not IPS.

質問＃76
In the policy displayed in the exhibit, the state of the Web Reputation Protection Module is set to "Inherited (On)", while the state for the other Protection Module is set to "On". Why is the Web Reputation Protection Module displayed differently than the other Protection Modules.

- A. In this example, the state for the Web Reputation Protection Module is inherited from the parent policy, while the other Protection Modules were turned on specifically in this child policy.
- B. In this example, the state for the Web Reputation Protection Module is listed as "In-herited (On)" as it was inherited from the default setting in the Base Policy.
- C. In this example, the state for the Web Reputation Protection Module is inherited from the parent policy, while the other Protection Modules were turned on at the computer level.
- D. The state for a Protection Module is always displayed as "Inherited (On)" until the module components are installed on the Deep Security Agent.

正解：A

解説：
The "Inherited (On)" state indicates that the module's configuration is inherited from the parent policy (here, the "Base Policy") and

has not been changed in the child policy. In contrast, modules listed as "On" were explicitly enabled or configured in the current child policy.

From the official documentation:

"A module set to 'Inherited (On)' means its configuration is inherited from a parent policy. Modules explicitly configured in the current policy are shown as 'On' or 'Off'." References:

質問 # 77

The details for an event are displayed in the exhibit. Based on these details, which Protection Module generated the event?

- A. Integrity Monitoring
- B. Firewall
- C. Log Inspection
- D. Intrusion Prevention

正解：C

解説：

The event details show a "Reason" referencing an Active Directory event (Success Audit), a "Description" that notes "Active directory Success Audit event," and a "Program Name" of "syslogd." This matches the operation of the Log Inspection module, which monitors logs from operating system and application sources and reports events such as authentication failures, system errors, and audit events.

The other modules do not generate events based on log entries in this manner.

質問 # 78

Which of the following statements is true regarding Maintenance Mode in the Application Control protection Module?

- A. When enabled, Maintenance Mode rescans the protected computer to rebuild the soft-ware inventory. Any new or changed software will be included in this rebuilt inventory.
- B. While in Maintenance Mode, all Block and Allow rules are ignored while new or updated applications are added to the software inventory
- C. When in Maintenance Mode, the Application Control Protection Module will continue to block software identified in Block rules, but will allow new and changed applications to be added to the software inventory.
- D. Maintenance Mode can be configured as a Scheduled Event. In this scenario, all soft-ware upgrades will be performed at the same time every day to avoid creating Alerts for normal software updates.

正解：C
