実用的なCTFL-UT対応資料試験-試験の準備方法-高品質なCTFL-UT復習教材

CTFL-UT試験資格証明書を取得することは難しいです。でも、ISQI CTFL-UT復習教材を選べれば、試験に合格することは簡単です。CTFL-UT復習教材の内容は全面的で、価格は合理的です。そして、ISQIはお客様にディスカウントコードを提供でき、CTFL-UT復習教材をより安く購入できます。

ISQI ISTQB Certified Tester-Foundation Level - Usability Testing 認定 CTFL-UT 試験問題 (Q35-Q40):

質問 # 35

Which of the following statements about usability testing is true?

- A. A usability test consists of one usability test session
- B. The preparation of a usability test is optional
- **C. Before the usability test sessions, a pilot usability test session can be conducted**
- D. The conditions under which a usability test is done are irrelevant

正解: C

解説:

A pilot usability test session is a critical step prior to conducting the actual usability test. Its purpose is to ensure that the test setup, task design, and moderator instructions are clear and function as expected.

According to ISO 9241-210 and the Nielsen Norman Group's best practices, pilot testing helps detect unforeseen issues and fine-tune the process. Options A and B are incorrect because testing conditions must reflect realistic scenarios, and thorough preparation is essential to gather meaningful usability data. Option D is also incorrect; a usability test typically consists of multiple sessions with different users to gather sufficient data for analysis. The pilot session ensures everything works smoothly before involving real participants.

#####

質問 # 36

What is a usability test task?

- A. A test session in usability testing in which a usability test participant is executing tests, moderated by a moderator and observed by a number of observers
- B. A process through which information about the usability of a system is gathered in order to improve the system (known as formative evaluation) or to assess the merit or worth of a system (known as summative evaluation)
- C. A usability test execution activity specified by the moderator that needs to be accomplished by a usability test participant within a given period of time
- D. A document specifying a sequence of actions for the execution of a usability test. It is used by the moderator to keep track of briefing and pre-session interview questions, usability test tasks, and post-session interview questions

正解: C

解説:

A usability test task is a clearly defined activity that a participant is asked to perform during a usability test session. These tasks are typically created by the test designer or moderator and are designed to reflect realistic user goals (e.g., "Find and buy a product"). The purpose is to observe the participant's interaction with the system and identify usability issues. Option A describes a usability test script, not a task. Option C defines usability evaluation in general, and D refers to a session, not a specific task. Therefore, B is correct.

質問 # 37

In a short conversation, a potential customer mentions that accessibility is of great importance to them. What does this mean?

- A. They focus on quantitative usability evaluations
- B. They use prototyping in their development process
- C. They also seek to address users with limitations
- D. They focus on agile development

正解: C

解説:

When a customer emphasizes the importance of accessibility, it means they are concerned with ensuring that users with disabilities or limitations are not excluded from using their products or services. Accessibility is about inclusiveness-providing equal access and opportunity to all users regardless of physical or cognitive ability. Option C directly reflects this understanding. The other options (A, B, and D) are aspects of usability or development methodologies but do not relate to addressing the needs of users with disabilities, which is the core focus of accessibility.

質問 # 38

Which of the following statements about usability test plans is true?

- A. It contains the results of the test sessions
- B. It should contain the briefing instructions
- C. It should be very elaborate and at least 10 pages
- **D. It contains a schedule**

正解: D

解説:

A usability test plan is a foundational document created before conducting usability testing. It outlines the objectives, scope, methodology, participants, tasks, and schedule for the testing activities. One of its essential components is the schedule, which details when and how test sessions will occur to ensure proper resource allocation and time management. Including a schedule helps coordinate between test moderators, participants, observers, and stakeholders, making the testing process organized and efficient. While briefing instructions (Option B) may be related to the usability test, they are typically documented separately or included in participant materials rather than the formal test plan itself. The test plan should be concise and focused; it need not be overly elaborate or lengthy (Option C), as clarity and usability of the plan are more important than length. The results of the test sessions (Option D) are not included in the test plan but rather compiled afterward in a test report or analysis document. Therefore, the correct statement is that the usability test plan contains a schedule, ensuring a structured timeline for the usability testing activities.

質問 # 39

You're defining usability test tasks for a web shop for mobile phones and smartphones. Finding out whether users are able to place an order easily has been identified as the main goal of the usability test.

Which of the following is a reasonable task definition to include in the test?

- A. Put the first phone you find in your shopping cart!
- **B. Your phone broke and you're looking for a new smartphone. Your budget is 200\$ and it should have an infrared sensor as you like to operate your home entertainment system with it. Find a suited smartphone and order it!**
- C. Enter the item number "1469483" in the search box and click "OK". Put the first item in the cart by clicking "add to bag". Then, click on "checkout" in order to start the order process. After that, fill in the form and click on "submit".
- D. Which mobile operating system do you prefer?

正解: B

解説:

Option B represents a realistic, goal-oriented scenario that reflects how an actual user would interact with the website. It incorporates context, user intent, constraints, and desired outcome—all characteristics of well- designed usability tasks. Option A is vague and lacks real-world motivation. Option C is too prescriptive and limits insight into user behavior, while D is a survey question, not a usability task. According to Nielsen Norman Group and ISO 25062, the best usability tasks are scenario-based, realistic, and outcome-driven- making B the correct answer.
