AZ-104적중율 높은 시험덤프공부 & AZ-104퍼펙트 인증덤프자료

Microsoft AZ-104덤프를 구매하시기전에 사이트에서 해당 덤프의 무료샘플을 다운받아 덤프품질을 체크해보실수 있습니다. AZ-104덤프를 구매하시면 구매일로부터 1년내에 덤프가 업데이트될때마다 업데이트된 버전을 무료로 제공해드립니다.Microsoft AZ-104덤프 업데이트 서비스는 덤프비용을 환불받을시 자동으로 종료됩니다.

최신 Microsoft Azure Administrator Associate AZ-104 무료샘플문제 (Q270-Q275):

질문 # 270

You have an on-premises data center and an Azure subscription. The data center contains two VPN devices. The subscription contains an Azure virtual network named VNet1. VNet1 contains a gateway subnet.

You need to create a site-to-site VPN. The solution must ensure that if a single instance of an Azure VPN gateway fails, or a single on-premises VPN device fails, the failure will not cause an interruption that is longer than two minutes.

What is the minimum number of public IP addresses, virtual network gateways, and local network gateways required in Azure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

정답:

설명:

Reference:

<https://docs.microsoft.com/en-us/azure/vpn-gateway/vpn-gateway-highlyavailable>

질문 # 271

You need to resolve the Active Directory issue.
What should you do?

- A. From Active Directory Users and Computers, select the user accounts, and then modify the User Principal Name value.
- B. From Azure AD Connect, modify the outbound synchronization rule.
- **C. Run idfix.exe, and then use the Edit action.**
- D. From Active Directory Domains and Trusts, modify the list of UPN suffixes.

정답: C

설명:

IdFix is used to perform discovery and remediation of identity objects and their attributes in an on-premises Active Directory environment in preparation for migration to Azure Active Directory. IdFix is intended for the Active Directory administrators responsible for directory synchronization with Azure Active Directory.

Scenario: Active Directory Issue

Several users in humongousinsurance.com have UPNs that contain special characters.

You suspect that some of the characters are unsupported in Azure AD.

Topic 3, Contoso Ltd

Overview

Contoso, Ltd. is a manufacturing company that has offices worldwide. Contoso works with partner organizations to bring products to market.

Contoso products are manufactured by using blueprint files that the company authors and maintains.

Existing Environment

Currently, Contoso uses multiple types of servers for business operations, including the following:

- * File servers
- * Domain controllers
- * Microsoft SQL Server servers

Your network contains an Active Directory forest named contoso.com. All servers and client computers are joined to Active Directory.

You have a public-facing application named App1. App1 is comprised of the following three tiers:

- * A SQL database
- * A web front end
- * A processing middle tier

Each tier is comprised of five virtual machines. Users access the web front end by using HTTPS only.

Requirements

Planned Changes

Contoso plans to implement the following changes to the infrastructure:

Move all the tiers of App1 to Azure.

Move the existing product blueprint files to Azure Blob storage.

Create a hybrid directory to support an upcoming Microsoft Office 365 migration project.

Technical Requirements

Contoso must meet the following technical requirements:

- * Move all the virtual machines for App1 to Azure.
- * Minimize the number of open ports between the App1 tiers.
- * Ensure that all the virtual machines for App1 are protected by backups.
- * Copy the blueprint files to Azure over the Internet.
- * Ensure that the blueprint files are stored in the archive storage tier.
- * Ensure that partner access to the blueprint files is secured and temporary.
- * Prevent user passwords or hashes of passwords from being stored in Azure.
- * Use unmanaged standard storage for the hard disks of the virtual machines.
- * Ensure that when users join devices to Azure Active Directory (Azure AD), the users use a mobile phone to verify their identity.

Minimize administrative effort whenever possible.

User Requirements

Contoso identifies the following requirements for users:

- * Ensure that only users who are part of a group named Pilot can join devices to Azure AD.
- * Designate a new user named Admin1 as the service administrator of the Azure subscription.
- * Admin1 must receive email alerts regarding service outages.
- * Ensure that a new user named User3 can create network objects for the Azure subscription.

질문 # 272

You have an Azure subscription that contains an Azure Availability Set named WEBPROD-AS-USE2 as shown in the following exhibit.

You add 14 virtual machines to WEBPROD-AS-USE2.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

정답:

설명:

Explanation:

Box 1: 2

There are 10 update domains. The 14 VMs are shared across the 10 update domains so four update domains will have two VMs and six update domains will have one VM. Only one update domain is rebooted at a time.

Therefore, a maximum of two VMs will be offline.

Box 2: 7

There are 2 fault domains. The 14 VMs are shared across the 2 fault domains, so 7 VMs in each fault domain.

A rack failure will affect one fault domain so 7 VMs will be offline.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-machines/windows/manage-availability>

질문 # 273

You have 100 Azure subscriptions. All the subscriptions are associated to the same Azure Active Directory (Azure AD) tenant named contoso.com.

You are a global administrator.

You plan to create a report that lists all the resources across all the subscriptions.

You need to ensure that you can view all the resources in all the subscriptions.

What should you do?

- A. From Windows PowerShell, run the Add-AzureADAdministrativeUnitMember cmdlet.
- **B. From Windows PowerShell, run the New-AzureADUserAppRoleAssignment cmdlet.**
- C. From the Azure portal, modify the profile settings of your account.
- D. From the Azure portal, modify the properties of the Azure AD tenant.

정답: B

설명:

The New-AzureADUserAppRoleAssignment cmdlet assigns a user to an application role in Azure Active Directory (AD). Use it for the application report.

질문 # 274

You have an Azure subscription that contains the virtual networks shown in the following table.

Each virtual network has 50 connected virtual machines.

You need to implement Azure Bastion. The solution must meet the following requirements:

* Support host scaling.

* Support uploading and downloading files.

* Support the virtual machines on both VNet1 and VNet2.

* Minimize the number of addresses on the Azure Bastion subnet.

How should you configure Azure Bastion? To answer, select the options in the answer area.

NOTE: Each correct answer is worth one point.

정답:

설명:
