

2026 Passing NCP-DB-6.10 Score Feedback | The Best Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 100% Free Interactive Testing Engine

ENPC Exam 6th Edition Questions & Answers

1. A 5-year-old child presents with hives, swelling of the lips and face, and stridor that developed about an hour after eating lunch. The child has no known allergies. Which of the following is the priority intervention?

- A. Administer intramuscular epinephrine
- B. Auscultate bilateral breath sounds
- C. Insert an intravenous catheter
- D. Administer inhaled albuterol

Answer A. Administer intramuscular epinephrine

2. An adolescent is awaiting ICU admission for pneumonia. During reassessment, which of the following findings would be most indicative that respiratory failure is developing?

- A. SpO2 of 94 % on room air
- B. Widened pulse pressure
- C. Extreme lethargy
- D. Flash capillary refill

Answer A. SpO2 of 94 % on room air

3. A 3-year-old has a two-day history of runny nose, low-grade fever, and a "barky" cough at night. The child is awake and alert with noted stridor. Pulse oximetry is 96% on room air. Which of the following interventions would be the most appropriated for this child?

1/8

The competition is in the tech sector is getting tougher and tougher day by day. Therefore, CertkingdomPDF is offering updated and latest Nutanix NCP-DB-6.10 Questions so aspirants can ace the Nutanix NCP-DB-6.10 test in a short time and stay competitive in today's challenging job market.

Our expert team will check the update NCP-DB-6.10 learning prep and will send the update version automatically to the clients if there is the update. We provide free updates for our worthy customer within one year after purchase. So the clients can enjoy the convenience of our wonderful service and the benefits brought by our superior NCP-DB-6.10 Guide materials. What is more, if you want to buy the NCP-DB-6.10 exam questions one year later, you can enjoy 50% discounts off.

100% Pass Quiz Nutanix Marvelous Passing NCP-DB-6.10 Score Feedback

NCP-DB-6.10 exam certification is an international recognition, which is equivalent to a passport to enter a higher position. The NCP-DB-6.10 exam materials and test software provided by our CertkingdomPDF are developed by experienced IT experts, which have been updated again and again. Now you just take dozens of Euro to have such Reliable NCP-DB-6.10 Test Materials. Once you get the certification you may have a higher position and salary.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.10

Sample Questions (Q17-Q22):

NEW QUESTION # 17

What step should be taken to make the profile available to all users:

- A. Create an Access Control role with the Create Profile right and assign to all users.
- B. Create an Access Control group with the desired users and grant it the Database Admin role.
- C. Update the profile and set the status to Published.
- **D. Update the profile and set available state to All.**

Answer: D

Explanation:

The correct answer is D because it allows the administrator to make the profile available to all users without requiring any additional permissions or roles. A profile is a collection of settings that define how NDB manages a database server or a database. By default, a profile is only available to the user who created it and the Database Admin role. To make a profile available to all users, the administrator can update the profile and set the available state to All. This will enable all users to view and use the profile for their database operations. The other options are not correct because they either require additional steps or do not achieve the desired outcome. Option A is not correct because creating an Access Control role with the Create Profile right and assigning it to all users will only allow them to create their own profiles, not use the existing one. Option B is not correct because creating an Access Control group with the desired users and granting it the Database Admin role will only make the profile available to those users, not all users. Option C is not correct because updating the profile and setting the status to Published will not change the availability of the profile, only the state of the profile. A published profile is a profile that has been tested and verified by the administrator and is ready for use. A draft profile is a profile that is still under development or testing and is not ready for use.

NEW QUESTION # 18

Where can an administrator configure a custom SSL certificate for Era?

- **A. Era UI**
- B. Era CLI
- C. Prism UI
- D. Prism CLI

Answer: A

Explanation:

An administrator can configure a custom SSL certificate for Era through the Era User Interface (UI). This can be done by logging into the Nutanix Console and selecting SSL Certificates from the drop-down list inside the gear icon. In the SSL Certificate dialog box, the administrator can click Replace Certificate, then select the Import Key and Certificate radio button. This process ensures secure communication within the Nutanix Era environment.

NEW QUESTION # 19

An administrator has been asked to patch several Nutanix database server VMs. Prior to patching, what should the administrator configure?

- A. Active Directory Access
- **B. A Repository**
- C. An SMTP Server
- D. pulse

Answer: B

Explanation:

Before patching several Nutanix database server VMs using the "Patch OS now" feature in NDB, the administrator must configure a Repository. A repository (e.g., a custom patch repository or Nutanix- provided source) contains the OS updates or patches (e.g., for Windows or Red Hat- based systems). NDB requires this repository to be specified to fetch and apply the patches, ensuring the database VMs are updated from a validated source.

NEW QUESTION # 20

An administrator needs to provision a 3-node MSSQL Server AG with the following configuration:

- Two database server VMS including the primary replica on a local site
- A third database server VM on a remote site

How many IP addresses will the network at each site require?

- A. 1 Cluster VIP and 1 Listener IP on the local site
1 Listener IP on the local site
2 IPs in the local site and 1 on the remote site for the database server nodes
- B. 2 Cluster VIP and 1 listener IP on the local site
- **C. 1 Cluster VIP and 1 Listener IP on the local site**
1 Cluster VIP and 1 Listener IP on the remote site
2 IPs in the local site and 1 on the remote site for the database server nodes
- D. 1 Cluster VIP and 1 listener IP on the remote site
2 IPs in the local site and 1 on the remote site for the database server nodes
1 Cluster VIP on the local site
1 Cluster VIP and 1 Listener IP on the remote site
2 IPs in the local site and 1 on the remote site for the database server nodes

Answer: C

Explanation:

When setting up a 3-node MSSQL Server AG with two database server VMs on a local site and a third database server VM on a remote site, the network at each site will require the following IP addresses:

1 Cluster VIP and 1 Listener IP on the local site.

1 Cluster VIP and 1 Listener IP on the remote site.

2 IPs in the local site and 1 on the remote site for the database server nodes.

This configuration ensures that each node in the cluster has a unique IP address, and each cluster and listener also has a unique IP address. This is necessary for the proper functioning of the cluster and to ensure that all nodes can communicate with each other and with clients.

NEW QUESTION # 21

An administrator has configured NDB HA across multiple Nutanix clusters. Which failure scenario will require manual interaction for the recovery?

- **A. More than one API Server VM is down.**
- B. NDB Server process is down.
- C. More than one HA proxy VM is down.
- D. One repository VM is down.

Answer: A

Explanation:

NDB HA is a feature that provides high availability and resilience for the NDB service and its components. NDB HA creates a cluster of API server VMs, repository VMs, and HAProxy VMs across multiple Nutanix clusters. Each component has a leader and a set of followers that are synchronized and can take over the leader role in case of a failure. NDB HA also monitors the health and status of the NDB components and performs automatic failover and recovery actions when possible. However, some failure scenarios may require manual intervention from the administrator to restore the NDB service. One such scenario is when more than one API server VM is down. The API server VMs are responsible for handling the requests from the NDB UI and CLI, as well as communicating with the repository VMs and the HAProxy VMs. If more than one API server VM is down, the NDB service may become unavailable or unstable, and the administrator will need to manually restart or redeploy the affected API server VMs. The other options do not require manual interaction for the recovery, as NDB HA can handle them automatically. If one repository VM is down, NDB HA will fail over to another repository VM that has the latest data. If more than one HAProxy VM is down, NDB HA will route the traffic to the remaining HAProxy VMs. If the NDB server process is down, NDB HA will restart the process or fail over to another API server VM.

NEW QUESTION # 22

.....

Feedbacks of many IT professionals who have passed Nutanix certification NCP-DB-6.10 exam prove that their successes benefit from CertkingdomPDF's help. CertkingdomPDF's targeted test practice questions and answers to gave them great help, which save their valuable time and energy, and allow them to easily and smoothly pass their first Nutanix Certification NCP-DB-6.10 Exam. So CertkingdomPDF a website worthy of your trust. Please select CertkingdomPDF, you will be the next successful IT person. CertkingdomPDF will help you achieve your dream.
