Supermicro MI300X Expert (SMI300XE) Certification Exam Sample Questions (Q27-Q32):

NEW QUESTION # 27
Before disconnecting the cables from the NVMe backplane, you should map or take a picture of the cables to ensure they are returned to the same locations. True or False?

- A. False
- B. True

Answer: B

Explanation:
When working with Supermicro MI300X GPU systems, it is highly recommended to map or take a picture of cable connections before disconnection.
Reasons:
* Ensuring Proper Reconnection# NVMe backplanes have multiple critical connections (MCIO cables, power cables, data lanes, and SAS connections). Misplacing any of these cables could cause:
* Boot failures
* Drive detection issues
* Performance degradation
* Avoiding Errors in Cable Routing# Supermicro documentation states that improperly routed cables can obstruct airflow, potentially leading to overheating in high-performance systems.
* Easing Future Troubleshooting# If issues arise after reassembly, a photo or cable map allows engineers to quickly verify whether cables were reconnected properly.
This best practice is officially recommended in Supermicro's service and installation guidelines for NVMe backplanes.

NEW QUESTION # 28
What information is shown in the IPMI storage monitoring section?

- A. Attached storage devices
- B. Severity of health events
- C. The motherboard
- D. Overheating issues

Answer: A

Explanation:
The IPMI storage monitoring section provides information about attached storage devices.
* Option A (Incorrect): IPMI does not display motherboard details in this section.
* Option B (Incorrect): Overheating issues are logged separately in the event logs.
* Option C (Correct): IPMI storage monitoring tracks attached storage devices.
* Option D (Incorrect): Severity of health events is found in system logs, not storage monitoring.

NEW QUESTION # 29
The ROCm commands are not providing output or are failing. What could be the primary reason why?
And how can you validate the reasoning?

- A. CPU is not installed correctly on the server. Review the OS dmesg logs for any odd CPU messages, then if located proceed to reseat the CPU.
- B. If more than 3 GPUs are missing, then ROCm commands will not function. We need to verify that the 3 are missing in the IPMI GUI and review the GPU component section to make sure that at least 2 or fewer GPUs are missing.
- C. The GPU baseboard may not be detected. You can determine this by opening the IPMI GUI and reviewing the FW section.
- D. You suspect there are GPUs not detected. To determine which GPUs are missing, open the IPMI GUI and review the GPU component section to make sure all GPUs are present.

Answer: D

Explanation:

IfROCm commands fail to provide output, the primary issue is likelymissing or undetected GPUs. The best way to validate this is by checking the IPMI GUI and reviewing the GPU component sectionto ensure that all GPUs are present.

* Option A (Correct):Missing GPUsare the most common causeof ROCm failures. The IPMI GUI provides visibility into which GPUs are detected.

* Option B (Incorrect):CPU misalignment would causegeneral system failure, not ROCm-specific issues.

* Option C (Incorrect):The GPU baseboard status can be checked in IPMI but isnot the primary cause of ROCm failures.

* Option D (Incorrect):ROCm can function with multiple missing GPUs, butthe key issue is confirming GPU presence first.

NEW QUESTION # 30

What is the main reason the AGFHC tool is not functioning properly?

- A. Missing 1 DIMM in the system.
- B. PSU needs to be reseated.
- C. Missing 1 or more GPUs in the system.
- D. CPU 2 is missing and the AGFHC requires 2 CPUs.

Answer: D

Explanation:

TheAGFHC tool requires a dual-CPU setupto function properly. IfCPU 2 is missing, the toolfails to operate correctly.

* Option A (Incorrect):Thetool does not depend on DIMM configuration.

* Option B (Incorrect):Missing GPUscan cause errors, butthe tool can still function.

* Option C (Correct):AGFHC requires both CPUsto be installed.

* Option D (Incorrect):PSU reseating isnot requiredfor AGFHC operation.

NEW QUESTION # 31

Which of the following are important safety precautions when removing the GPU tray?

- A. For your own safety, and the safety of the system, two people should remove the tray which weighs more than 70 pounds.
- B. Keep the tray straight to prevent it from tilting up or down, which can damage the upper and lower portion of the chassis.
- C. Unnecessary movement can damage the fans below the GPU tray.
- D. All of the above.

Answer: D

Explanation:

Whenremoving the GPU trayin anMI300X system, the following precautions must be taken:

* Two people should remove the trayas itweighs over 70 pounds, making it unsafe for one person to handle.

* Keeping the tray straightprevents it fromtilting, which candamage the chassis components.

* Unnecessary movement can damage cooling fansdirectly beneath the GPU tray.

Since all the above precautions arecritical for safe removal, thecorrect answer is D (All of the above).
