Fortinet FCP - Azure Cloud Security 7.4 Administrator Sample Questions (Q58-Q63):

NEW QUESTION # 58

What does the deployment of a FortiGate instance in Azure typically protect?

Response:

- A. Only the data at rest
- B. The entire network infrastructure
- C. Only outbound traffic
- D. Application deployment scripts

Answer: B

NEW QUESTION # 59

What is a requirement when you deploy a FortiGate active-active cluster in Azure?

- A. You must configure all FortiGate VMs with three or more interfaces.
- B. You must use unicast FGCP to synchronize the configurations.
- C. You must configure both load balancers to allow administrative access.
- D. You must assign the public IP address to an Azure load balancer.

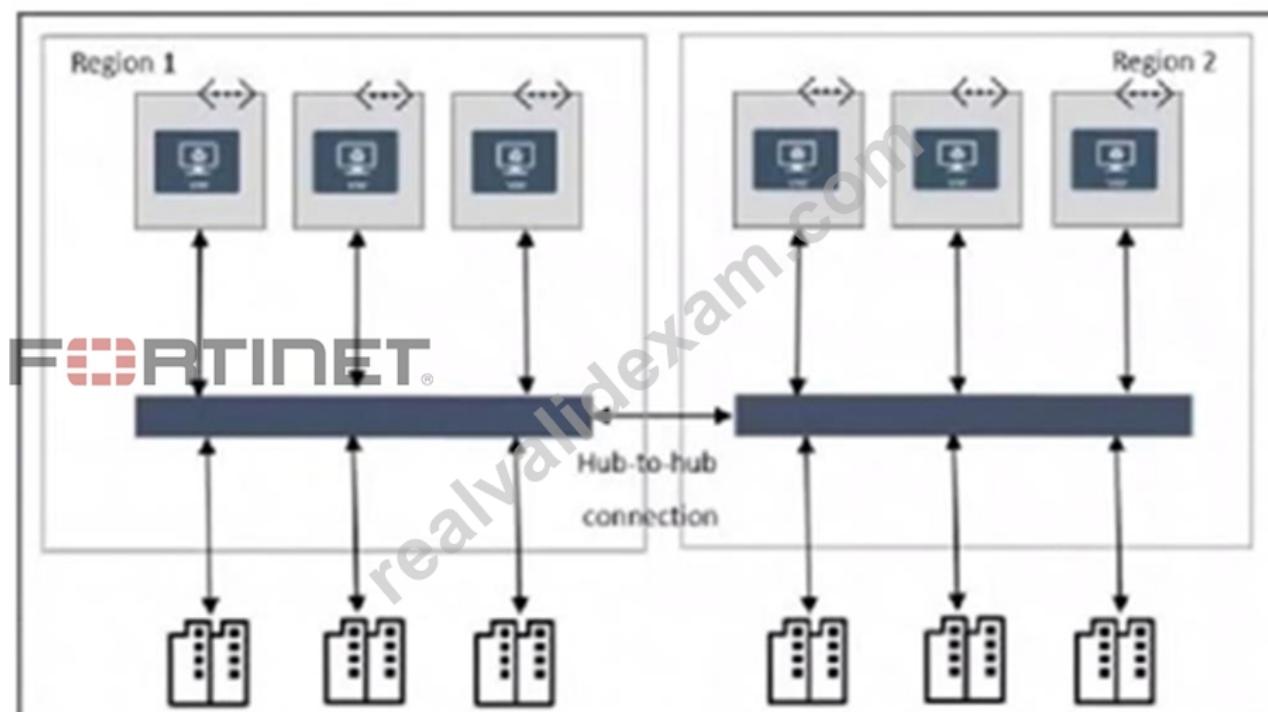

Answer: D

Explanation:

In an active-active FortiGate cluster deployment in Azure, you must assign the public IP address to an Azure load balancer. This is required because Azure does not support multiple VMs sharing a single public IP directly. The Azure Load Balancer handles inbound traffic and distributes it to the active FortiGate instances.

NEW QUESTION # 60

Refer to the exhibit.

Your organization is planning the implementation of a complex hub-to-spoke solution to meet automated large-scale branch connectivity with multiple regions, offering a diverse range of connectivity options.

Which Azure networking service can deliver a solution?

- A. Azure VPN Gateway
- B. Azure Firewall Manager
- C. **Azure Virtual WAN**
- D. Azure SD-WAN

Answer: C

Explanation:

Azure Virtual WAN is designed for large-scale, automated, and global branch connectivity, supporting hub-and-spoke architectures across multiple regions. It enables centralized routing, hub-to-hub connectivity, and integrates with VPN, ExpressRoute, and SD-WAN solutions, making it ideal for complex, multi-region deployments as shown in the diagram.

NEW QUESTION # 61

You want to take advantage of Azure availability zones for your cloud-based Fortinet deployment.

Which two benefits do Azure availability zones provide? (Choose two.)

- A. **Protect applications and data through high availability with fault isolation and redundancy**
- B. Protect applications and data across multiple Azure regions
- C. **Enhanced protection for application and data in a single Azure region**
- D. Improve database performance and reliability

Answer: A,C

Explanation:

Enhanced protection for application and data in a single Azure region - Availability Zones provide physical separation of infrastructure within a single Azure region, protecting against datacenter-level failures.

Protect applications and data through high availability with fault isolation and redundancy - They offer fault isolation and redundancy, enabling high availability for applications and services by distributing them across multiple zones within the same region.

NEW QUESTION # 62

How does Azure Firewall contribute to your network's security architecture?

Response:

- A. By offering content delivery network services
- B. By managing virtual network connections
- C. By providing shared access signatures
- D. **By filtering incoming and outgoing network traffic based on defined security rules**

Answer: D
