Why not study and practice for just 20 to 30 hours and then pass the examination?

CompTIA Cybersecurity Analyst (CySA+) Certification Exam Sample Questions (Q578-Q583):

NEW QUESTION # 578
Which of the following is the most likely reason for an organization to assign different internal departmental groups during the post-incident analysis and improvement process?

- A. To ensure all staff members get exposure to the review process and can provide feedback
- B. To verify that the organization playbook was properly followed throughout the incident
- C. To allow cross-training for staff who are not involved in the incident response process
- D. To expose flaws in the incident management process related to specific work areas

Answer: D

NEW QUESTION # 579
Which of the following is the appropriate phase in the incident response process to perform a vulnerability scan to determine the effectiveness of corrective actions?

- A. Recovery
- B. Root cause analysis
- C. Lessons learned
- D. Reporting

Answer: A

Explanation:
Comprehensive and Detailed Step-by-Step
Performing a vulnerability scan during the recovery phase ensures that corrective actions, such as patches or configuration changes, have effectively addressed the vulnerabilities exploited during the incident. This step validates the system's security before fully restoring operations.

CompTIA CySA+ Objectives (Domain 3.0 - Incident Response)
CompTIA CySA+ Practice Tests (Chapter 3: Containment, Eradication, and Recovery)

NEW QUESTION # 580
A security analyst has prepared a vulnerability scan that contains all of the company's functional subnets. During the initial scan users reported that network printers began to print pages that contained unreadable text and icons. Which of the following should the analyst do to ensure this behavior does not occur during subsequent vulnerability scans?

- A. Perform non-credentialed scans
- B. Ignore embedded web server ports
- C. Increase the threshold length of the scan timeout
- D. Create a tailored scan for the printer subnet

Answer: D

NEW QUESTION # 581
Which of the following best describes the threat concept in which an organization works to ensure that all network users only open attachments from known sources?

- A. Advanced persistent threat
- B. Unintentional insider threat
- C. Nation-state threat
- D. Hacktivist threat

Answer: B

Explanation:
An unintentional insider threat is a type of network security threat that occurs when a legitimate user of the network unknowingly exposes the network to malicious activity, such as opening a phishing email or a malware-infected attachment from an unknown source. This can compromise the network security and allow attackers to access sensitive data or systems. The other options are not

related to the threat concept of ensuring that all network users only open attachments from known sources.

Use Firewalls section.

NEW QUESTION # 582

An analyst is becoming overwhelmed with the number of events that need to be investigated for a timeline. Which of the following should the analyst focus on in order to move the incident forward?

- A. Mean time to detect
- B. Impact
- C. Vulnerability score
- D. Isolation

Answer: B

NEW QUESTION # 583

......

It can be said that all the content of the CS0-003 study materials are from the experts in the field of masterpieces, and these are understandable and easy to remember, so users do not have to spend a lot of time to remember and learn. It takes only a little practice on a daily basis to get the desired results. Especially in the face of some difficult problems, the user does not need to worry too much, just learn the CS0-003 Study Materials provide questions and answers, you can simply pass the exam. This is a wise choice, and in the near future, after using our CS0-003 training materials, you will realize your dream of a promotion and a raise, because your pay is worth the rewards.
