Esri Enterprise Administration Professional 2201 Sample Questions (Q61-Q66):

NEW QUESTION # 61

An organization expects a large influx of users who use the standard analysis tools in the portal Map Viewer.

The organization is concerned with the hosting server's available resources.

Which system resource should be closely monitored?

- A. Disk activity
- B. **CPU utilization**
- C. Network utilization

Answer: B

Explanation:

When users perform standard analysis tasks in the portal Map Viewer, the hosting server executes geoprocessing operations that are computationally intensive. These operations require significant CPU resources. Monitoring CPU utilization helps ensure that the server can handle the increased load without performance degradation.

While disk activity and network utilization are important, they are less directly impacted by standard analysis tasks compared to CPU usage. Therefore, CPU utilization is the primary resource to monitor in this scenario.

NEW QUESTION # 62

An organization has an ArcGIS Enterprise deployment but does not have access to ArcGIS Online. The GIS administrator wants to create a web page that is easy to navigate by non-GIS users but allows these users to interact with, download, and create apps from data.

Which option should the GIS administrator use?

- A. **ArcGIS Enterprise Sites**
- B. ArcGIS Experience Builder
- C. ArcGIS Hub

Answer: A

Explanation:

ArcGIS Enterprise Sites is a capability within ArcGIS Enterprise that enables organizations to create tailored web pages for sharing data and content. These sites are designed to be user-friendly for non-GIS users, allowing them to interact with, download, and create applications from the organization's data. Since the organization does not have access to ArcGIS Online, ArcGIS Enterprise Sites provides the necessary functionality within their existing deployment.

ArcGIS Hub (Option A) is a separate product that requires ArcGIS Online. ArcGIS Experience Builder (Option C) is a tool for creating web applications but does not provide the comprehensive site-building capabilities needed for this scenario.

NEW QUESTION # 63

A GIS administrator receives reports of slow-performing services and notices that disk space is filling up after recent troubleshooting sessions.

In those sessions, the following tasks were performed:

- * Services added to the shared instance pool
- * Log retention settings reduced
- * Log level set to Debug
- * ArcGIS Server machine restarted
- * An additional ArcGIS Server site federated

What is causing this slow performance?

- A. Additional services in the shared instance pool
- B. Adjusting the log level to Debug
- C. Federating the additional ArcGIS Server site
- D. Restarting ArcGIS Server

Answer: A

NEW QUESTION # 64

An ArcGIS administrator executes a script to silently upgrade all components of ArcGIS Enterprise version 10.6.1 to version 10.9.1. The upgrade completes without logging any errors.

When the administrator logs in, the following message appears: "Members in your organization were assigned the Standard (Temporary) or Lite (Temporary) user types. No users can log in to the Portal." What is causing these issues?

- A. The portal has no internet access, and the Software Authorization Wizard could not connect to Esri to validate the new license file.
- B. The organization has level 2 members and the new license file used for the upgrade now has more than one compatible user type.
- C. The Portal for ArcGIS upgrade process requires a restart of the Portal for ArcGIS service when adding additional user types.

Answer: B

Explanation:

During the upgrade from ArcGIS Enterprise 10.6.1 to 10.9.1, user type licensing is enforced. If the new license file includes more than one compatible user type (e.g., Creator and GIS Professional), existing members without a specified user type may be assigned temporary user types like "Standard (Temporary)" or

"Lite (Temporary)." These temporary assignments prevent users from logging in until valid user types are manually assigned.

This issue is not related to internet access (Option B) or the need to restart services (Option C).

NEW QUESTION # 65

A GIS administrator works for the Department of Transportation. Users need to analyze decades of traffic and crash data to determine the interstates with the most incidents. They will also analyze when certain vehicles were speeding and braking, and then correlate this data with vehicular accident locations.

Which server must be configured to support this workflow?

- A. GeoEvent Server
- B. GeoAnalytics Server
- C. Notebook Server

Answer: B

Explanation:

ArcGIS GeoAnalytics Server is designed to perform distributed analysis on large volumes of spatial and temporal data. It is particularly suited for workflows that involve analyzing patterns over time and space, such as identifying interstates with the most incidents over decades and correlating vehicle behavior (like speeding and braking) with accident locations.

GeoAnalytics Server provides tools for aggregating data, detecting incidents, and reconstructing tracks, which are essential for understanding complex transportation datasets. Its distributed computing framework allows for efficient processing of big data, making it the appropriate choice for the described workflow.

GeoEvent Server (Option B) is primarily used for real-time data processing and event detection, which is not the focus of this analysis. Notebook Server (Option C) supports interactive data science and analysis workflows using Jupyter notebooks but does not provide the same level of performance and scalability for big data analysis as GeoAnalytics Server.
