The Sharing-and-Visibility-Architect is a fantastic choice for absolutely everyone looking to increase their profession with the Sharing-and-Visibility-Architect certification. Purchase Now.

## Salesforce Certified Sharing and Visibility Architect Sample Questions (Q17-Q22):

### NEW QUESTION # 17

Universal Containers (UC) has a custom Apex class that enforces a business process and updates opportunities. UC has noticed that fields with Field-Level Security permission of Read-Only on certain users' profiles are being updated by this class. How should the architect fix this problem?

- **A. Use the IsUpdateable() Apex method to test each field prior to allowing update.**
- B. Add the With Sharing keyword to the class.
- C. Put the code in an inner class that uses the With Sharing keyword.

**Answer: A**

Explanation:

In Apex, the IsUpdateable() method of the Schema.DescribeFieldResult class checks if the current user has permission to update a specific field. Using this method ensures that the Apex class respects Field-Level Security (FLS) for all profiles, avoiding unauthorized updates.

\* Option A: Adding the "With Sharing" keyword enforces record-sharing rules but does not enforce field-level security.

\* Option B: Placing the code in an inner class with "With Sharing" does not address the field-level security issue.

\* Option C (Correct): Using IsUpdateable() ensures field permissions are honored programmatically, preventing updates to read-only fields.

References:

\* Schema.DescribeFieldResult Methods

\* Enforcing Field-Level Security in Apex

### NEW QUESTION # 18

A custom Invoice object has been created with a master-detail relationship to Account. The accounts receivable (AR) team needs access to invoice records. AR users neither own nor have access to account records. The Account organization-wide default is set to Private. The AR team is unable to find invoices in list views, reports, and Global Search. The architect has been asked to help troubleshoot.

What is preventing AR team members from seeing invoices?

- **A. A sharing rule is missing to share accounts with the AR team.**
- B. A sharing rule is missing to share invoices with the AR team.
- C. The AR profile does not have Read permission to the Invoice object.

**Answer: A**

### NEW QUESTION # 19

Universal Containers (UC) would like to store an encryption key within Salesforce for use in Apex code, but it does not want users to be able to see this confidential key. Users require the view setup permission.

How can UC securely store the confidential key?

- A. Create a custom metadata type that stores the encryption key. Make sure that only the admin profile has access to the custom metadata type so that end users cannot access the encryption key.
- B. Create a protected custom metadata type that stores the encryption key. Package the protected custom metadata type with its associated records in an unlocked package. Install the package in the production org.
- **C. Create a protected custom metadata type that stores the encryption key. Package the protected custom metadata type with its associated records in a managed package. Install the package in the production org.**

**Answer: C**

Explanation:

Protected custom metadata types in managed packages provide a secure way to store sensitive information like encryption keys. When packaged as part of a managed package, the metadata records are shielded from access by users, even those with View Setup and Configuration permissions.

\* Option A: Custom metadata types without protection do not secure the key from users with View Setup permission.

\* Option B: Unlocked packages do not provide the same level of protection as managed packages.

\* Option C (Correct): A protected custom metadata type in a managed package ensures the encryption key is securely stored and cannot be accessed by users.

References:

\* Custom Metadata Types

### NEW QUESTION # 20

Which three capabilities are available with Enterprise Territory Management? Choose 3 answers

- A. Share a report or dashboard folder with a Territory
- B. Assignment of Territory on Opportunities
- C. Create a public group with Territory
- D. Integration with Collaborative Forecasting
- E. Metadata API Support

**Answer: B,D,E**

Explanation:

Explanation

Enterprise Territory Management is a feature that allows you to assign accounts to territories based on criteria such as geography, industry, revenue, etc. With Enterprise Territory Management, you can:

Use the Metadata API to create, update, and delete territory models, territories, and account assignments.

Integrate with Collaborative Forecasting to forecast sales revenue by territory.

Assign opportunities to territories based on the account assignment or other criteria.

### NEW QUESTION # 21

Universal Containers (UC) has a partner community for its 200 distributors.

UC customer accounts are assigned an individual distributor. The organization-wide default setting for the custom Delivery object is Private.

How should an architect advise UC to grant all users at a distributor access to delivery records for all customers assigned to a particular distributor?

- A. Create 2 criteria-based sharing rule that shares delivery records matching the Distributor to users of a Public Group created for the distributor.
- B. Create a criteria based sharing rule that shares delivery records matching a distributor to the Distributor role in the Role Hierarchy.
- C. Create a Sharing Set for the Distributor profile to grant access to the Delivery object.

**Answer: C**

Explanation:

\* Sharing Sets in Partner Communities:

\* Sharing Sets allow sharing of records with users in specific profiles, based on a common field value between the user and the record.

\* Why Option C is Correct:

\* A Sharing Set can be configured to grant access to Delivery records where the distributor matches a custom field on the record.

This is a scalable solution for partner communities.

\* Why Others Are Incorrect:

\* Option A: Role Hierarchies are limited to three levels for partner users, and this approach does not scale well for 200 distributors.

\* Option B: Using two sharing rules adds unnecessary complexity and may not handle all scenarios effectively.

For details on Sharing Sets, see Salesforce Partner Community Sharing documentation: <https://help.salesforce.com/>

## NEW QUESTION # 22

.....

As the rapid development of the world economy and intense competition in the international, the leading status of knowledge-based economy is established progressively.
