You can also choose to use our MB-335 Study Materials by your computer when you are at home. You just need to download the online version of our MB-335 study materials, which is not limited to any electronic device and support all electronic equipment in anywhere and anytime.

Microsoft Dynamics 365 Supply Chain Management Functional Consultant Expert Sample Questions (Q37-Q42):

NEW QUESTION # 37

A company uses Dynamics 365 Supply Chain Management.

The marketing group needs to be able to view a manufacturer's suggested retail price (MSRP) for a new bill of materials (BOM) item when the cost of the BOM item is calculated.

You need to configure the functionality.

What should you do?

- A. Add a profit setting percentage to the released BOM product.
- B. Add a profit setting percentage to a calculation group.
- C. Add a profit setting percentage to a cost group.
- **D. Use the category price rules to generate a trade agreement with the sales price.**
- E. Set the sales price model field on the calculation group to item sales price.

Answer: D

Explanation:

* To view the manufacturer's suggested retail price (MSRP) for a new bill of materials (BOM) item, you need to configure a calculation group with a profit setting percentage. A calculation group is a group of

* settings that determine how the cost and sales price of a BOM item are calculated 1. A profit setting percentage is a percentage that is added to the cost of a BOM item to calculate the sales price 2. You can specify a profit setting percentage for each calculation group on the Calculation groups page 3.

* When you calculate the cost and sales price of a BOM item, you must select a calculation group on the Calculations page. The calculation group determines the cost model and sales price model that are used for the BOM calculation. The cost model defines how the cost of the BOM item is calculated based on the cost categories and cost groups of the components and operations. The sales price model defines how the sales price of the BOM item is calculated based on the profit setting percentage and the cost model.

* By using a calculation group with a profit setting percentage, you can view the MSRP for a new BOM item when you calculate its cost and sales price. The MSRP will be shown as the calculated sales price on the Calculate item cost page. You can also view the calculation details and see how the profit setting percentage is applied to the cost of the BOM item.

* The other options are not correct, because they do not allow you to view the MSRP for a new BOM item when you calculate its cost. Setting the sales price model field on the calculation group to item sales price would use the existing sales price of the BOM item from the Item price page, instead of calculating a new sales price based on a profit setting percentage. Using the category price rules to generate a trade agreement with the sales price would create a trade agreement line for the BOM item based on its category, but it would not show the MSRP when you calculate its cost. Adding a profit setting percentage to the released BOM product or to a cost group would have no effect, because these entities do not affect how the sales price of a BOM item is calculated.

1: Calculation groups 2: Profit settings 3: Create or modify calculation groups : [BOM calculations] : [Cost models and sales price models] : [Calculate costs and prices for manufactured items] : [Category pricing rules]

NEW QUESTION # 38

A manufacturing company uses Dynamics 365 Supply Chain Management. The company operates three eight-hour shifts per day, Monday through Friday.

The company purchased equipment for a new process that cannot be performed with existing equipment. This specialized equipment performs only this unique task. The machinery must always be monitored and controlled by a worker.

The machine must be added to the existing production line and be ready as soon as possible. Future planned production orders must not overload the running maximums of the new machine.

You need to configure the system.

Which four actions must you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

1 - Add the machine as a resource and set the Finite capacity checkbox to Yes.

2 - Create a capacity for the machining functions and assign it to the machine.

3 - Create a working time template.

4 - Assign a working time calendar to the resource.

NEW QUESTION # 39

A company that assembles packaging material uses Dynamics 365 Supply Chain Management.

The glue that is used in assembly has run out of stock and will not be back in stock as expected. Another adhesive must be substituted for the glue. This will affect orders in planning as well as production orders that have started.

You need to ensure that the substitute adhesive is used in production until the glue is back in stock.

Which configuration should you use for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 40

A company implements Dynamics 365 Supply Chain Management.

You need to ensure that cost roll-ups and sales price calculations are configured for the scenario. Which options should you use? To answer select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 41
