

Certification C_S43_2601 Exam, Valid C_S43_2601 Test Practice

Our SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) exam questions are curated and crafted by experts. We have put in a lot of efforts to create amazing guides for our customers. Passing C_S43_2601 can be hard, and you won't find such exam C_S43_2601 Brain Dumps anywhere. With C_S43_2601 sample questions exam dumps, you can secure high marks in the C_S43_2601. We provide 100% money back guarantee on exam C_S43_2601 practice exam products.

You can pass your SAP C_S43_2601 certification exam in less time, without wasting time and money on outdated or unreliable SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) (C_S43_2601) exam study materials. Don't let fear or a lack of resources hold you back from achieving your goals, trust DumpsTests SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) (C_S43_2601) practice test material and achieve the highest marks in your SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) (C_S43_2601) exam

>> Certification C_S43_2601 Exam <<

Valid C_S43_2601 Test Practice & C_S43_2601 Real Exam Answers

What you can get from the C_S43_2601 certification? Of course, you can get a lot of opportunities to enter to the bigger companies. After you get more opportunities, you can make full use of your talents. You will also get more salary, and then you can provide a better life for yourself and your family. C_S43_2601 Exam Preparation is really good helper on your life path. Quickly purchase C_S43_2601 study guide and go to the top of your life!

SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) Sample Questions (Q10-Q15):

NEW QUESTION # 10

Create and use a Maintenance Work Center

The project team evaluates during the implementation project the organizational elements in SAP S/4HANA Asset Management.

The following features need to be checked:

- * Create a Maintenance Work Center
- * Create a capacity demand for a Maintenance Work Center
- * Create a new Maintenance Work Center master record ZZ-ME## for maintenance plant 1010 similar to maintenance work center T-ME00 and save it. Use the following information:
 - Create a capacity demand of 1 hour for the just created Maintenance Work Center ZZ-ME## by creating a new maintenance order of order type PM01 .

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 3: Create and Use a Maintenance Work Center

Objective

In Task 3, the requirement was to:

- * create a new maintenance work center ZZ-ME42 for plant 1010 similar to T-ME00
- * maintain the required capacity values
- * create a 1-hour capacity demand for that work center by creating a maintenance order of type PM01

□ Part 1: Create the Maintenance Work Center

Requirement from task file

The task required the following values for the work center:

- * Plant = 1010
- * Work Center = ZZ-ME42
- * Description = Mechanical Maintenance 42
- * No. Ind. Capacities = 5
- * Capacity = 24.00 H

The task also stated that the work center must be created similar to maintenance work center T-ME00 .

□ Step-by-step procedure

Step 1: Open work center creation

- * Go to SAP GUI command field
- * Enter transaction IR01
- * Press Enter

Transaction IR01 is used to create a new work center. This is the correct starting point for creating the maintenance work center required in Task 3.

Step 2: Enter initial work center data

On the Create Work Center: Initial Screen , enter:

- * Plant = 1010
- * Work Center = ZZ-ME42
- * Work Center Category = 0005
- * In Copy from :
- * Plant = 1010
- * Work Center = T-ME00

Then press Enter .

The task explicitly required the work center to be created for plant 1010 and to be created similar to T-ME00.

Work center category 0005 is the maintenance work center category, so this was the correct category to use for a maintenance work center.

Step 3: Include capacity data during copy

When the Copy from popup appeared:

- * select Capacities
- * continue with the green check

This was important because the task required changing capacity-related data:

- * No. Ind. Capacities = 5
- * Capacity = 24.00 H Copying the capacity data ensured the new work center inherited the capacity structure from T-ME00 and could then be adjusted correctly.

□ Step 4: Maintain basic data

On the work center master screen:

- * change the description to Mechanical Maintenance 42

This matches the exact description required by the task.

Step 5: Maintain capacity values

Go to the Capacities tab, then open the capacity detail screen.

Maintain or verify:

- * No. Ind. Capacities = 5
- * Capacity Base Unit = H
- * Capacity recalculated to 24.00 H

In our system, the Capacity field was system-calculated and not directly editable.

The final valid values were achieved with:

- * Start Time = 08:00:00
- * End Time = 17:00:00
- * Length of breaks = 01:00:00
- * Capacity Utilization = 60

* No. Ind. Capacities = 5

This produced:

* Capacity = 24.00 H

The task required 24.00 H capacity, but SAP calculated it automatically based on operating time, utilization, and number of individual capacities.

The resulting calculation was correct and matched the task requirement exactly.

Step 6: Save the work center

* Click Save

Later, when trying to create the same work center again, SAP displayed the system message:

* "Work center ZZ-ME42 in plant 1010 already exists"

Explanation / Verification:

This system message confirmed that the work center had already been created successfully.

Therefore, the creation of ZZ-ME42 was verified as complete.

Part 2: Create a 1-Hour Capacity Demand

Requirement from task file

The task required:

* create a capacity demand of 1 hour

* for the newly created maintenance work center ZZ-ME42

* by creating a maintenance order of type PM01

Step-by-step procedure

Step 7: Open maintenance order creation

* In the command field, enter /nIW31

* Press Enter

Transaction IW31 is used to create a maintenance order.

The /n ensured SAP exited the previous transaction and opened the new one directly.

Step 8: Enter order header data

On the Create Maintenance Order: Initial Screen, enter:

* Order Type = PM01

* Planning Plant = 1010

Then press Enter.

The task explicitly required the capacity demand to be created by means of a maintenance order of type PM01.

Step 9: Enter order description

On the order header screen, enter a short text such as:

* Capacity demand ZZ-ME42

The task did not prescribe a specific short text, so a meaningful description was used for traceability.

Step 10: Create the first operation

In the first operation area / operations overview, maintain:

* Operation = 0010

* Work Center = ZZ-ME42

* Plant = 1010

* Control Key = PM01

* Work Duration / Work = 1

* Unit = H

Then press Enter.

This operation is the actual source of the capacity demand.

The capacity demand is not created merely by the order header; it is created by assigning the operation to the work center with a planned work value of 1 hour.

Therefore, these operation entries were the critical part of fulfilling Task 3.

Step 11: Save the maintenance order

* Click Save

SAP displayed the confirmation message:

* "Order saved with number 4000314"

Explanation / Verification:

This was the final confirmation that the maintenance order had been created successfully.

Because the operation was assigned to ZZ-ME42 with 1 H planned work, this verified that the required 1-hour capacity demand had been created for the work center.

Verified completed objects

The following results were verified during execution:

* Maintenance Work Center created

* Work Center = ZZ-ME42

* Plant = 1010

- * confirmed by SAP message that the work center already existed when rechecked
- * Capacity maintained correctly
- * No. Ind. Capacities = 5
- * Capacity = 24.00 H
- * Capacity demand created
- * maintenance order type PM01
- * operation assigned to ZZ-ME42
- * planned work = 1 H
- * Order successfully saved
- * SAP confirmation: Order saved with number 4000314

NEW QUESTION # 11

Use Phase-Based Maintenance Processing

The project team evaluates during the implementation project Phase-Based Maintenance Processing in SAP S/4HANA Asset Management. The following features need to be checked:

- * Initiate and screen a Maintenance Notification
- * Plan Maintenance Order and send it for approval
- * Create a Maintenance Notification using an already available notification type which is suitable for phase-based maintenance and save it.

Use the following data:

- * Screen and accept the just created Maintenance Notification.
- * Create an Order (Phase-based) for your accepted notification and submit it for approval.

Use the following data:

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 10 Overview

This task evaluates your ability to manage the newer, phase-led maintenance workflow in SAP S/4HANA.

Unlike the traditional "emergency" repair you did earlier, this process includes formal screening and approval steps Step 1: Create a Phase-Based Maintenance Notification In this step, you initiate the request.

- * Access the Transaction : Use transaction IW21 or the Fiori app Create Maintenance Request .
- * Select Notification Type : Use a type configured for phase-based maintenance (typically Y1 - Maintenance Request).
- * Enter the Following Data :
- * Technical Object : T-PB48
- * Description : Defective pump (phase-based)
- * Current Location : Production Line 1
- * Detection Method : Continuous Condition Monitoring
- * Operational Effect : Production restricted
- * Save : Note the notification number generated.

Explanation : This step "initiates" the maintenance process. In phase-based maintenance, the notification starts in the Initiation phase, where it must be reviewed before any work is planned.

Step 2: Screen and Accept the Notification

As a "Maintenance Coordinator," you must now review the request.

- * Access the Fiori App : Open Screen Maintenance Requests .
- * Locate Your Notification : Find the notification you just created for T-PB48.
- * Perform Screening :
- * Review the details to ensure they are complete.
- * Click Accept to move it to the next phase.

Explanation : "Screening" is a quality gate. It ensures that the maintenance team only spends time planning valid, well-described issues. Once accepted, the notification moves from the Initiation phase to the Screening phase and finally becomes available for planning

Step 3: Create and Plan the Phase-Based Order

Now you will create the formal work order for the accepted request.

- * Create Order : From within the accepted notification, or using the Manage Maintenance Backlog app, choose to Create Order .
- * Enter Planning Data :
- * Technical Object : T-PB48

* Operation 0010 Description : Repair damage

* Operation 0010 Work : 2 h

* Submit for Approval : Look for the Submit for Approval button at the top of the order screen.

Explanation : This step moves the order into the Planning phase. By submitting it for approval, you are requesting the budget and resources to perform the work. The order status will change to indicate it is

"Waiting for Approval"

NEW QUESTION # 12

Task 11: Classify a piece of Equipment

The project team evaluates during the implementation project the classification of Technical Objects in order to use Checklists in SAP S/4HANA Asset Management. The following features need to be checked:

* Assign a class to a Technical Object

* Assign characteristic values to a class

* Assign class EQ11 value to Technical Object T-PA## .

* Assign a characteristic value, so that Inspection Plan Q / CL-DE-00 / 1 is automatically found during the checklist process

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 11 Overview

This task involves classifying a piece of equipment so it can be used in the Checklist process . By assigning a specific class and characteristic values, you enable the system to automatically find the correct inspection plan when a maintenance order is created.

Step 1: Access the Equipment Master Record

To classify the equipment, you must first open its master record in "Change" mode.

* Transaction Code : Enter IE02 (Change Equipment) in the command field and press Enter .

* Equipment : Enter T-PA48 .

* Action : Press Enter to open the record.

Step 2: Assign the Class to the Equipment

Now you will link the equipment to a class that contains the required technical characteristics.

* Navigate : Click the Classification button in the top toolbar (or go to the Classes tab if available).

* Class Assignment :

* Class Type : Ensure this is set to 002 (Equipment Class).

* Class : Enter EQ11 .

* Action : Press Enter . The system will now display the characteristics associated with class EQ11 in the bottom half of the screen.

Explanation : Assigning a class is like giving the equipment a "category". Class EQ11 is specifically configured in this system to hold the data needed for checklist processing.

Step 3: Assign Characteristic Values

This is the critical step that tells the system exactly which inspection plan to use for this specific pump.

* Locate the Characteristic : In the values table, look for a characteristic related to "Inspection Plan" or "Checklist Group."

* Enter the Value : Assign the value so that Inspection Plan CL-DE-00 / 1 is automatically found.

* Note: Typically, you will enter CL-DE-00 in the "Inspection Plan Group" field and 1 in the "Group Counter" field.

* Action : Press Enter to validate the values.

Explanation : Characteristic values are the specific details for this asset. By entering these values, you "tag" the equipment so that whenever it is added to a maintenance order, the system knows to look for the CL-DE-00 checklist automatically.

Step 4: Save

* Action : Click the Save (floppy disk) icon.

* Confirmation : The system should display a message at the bottom saying: "Equipment T-PA48 changed."

NEW QUESTION # 13

Schedule a Maintenance Plan

The project team evaluates during the implementation project the scheduling of Maintenance Plans in SAP S/4HANA Asset Management. The following features need to be checked:

Schedule a Maintenance Plan

Display a generated Maintenance Order

Schedule the previously created Maintenance Plan. The following prerequisites have to be met:

The next upcoming call is the 4 MON Maintenance Package

Calculate the Completion Date of the last Maintenance Package as follows: Today's date minus 4 weeks (e.g.

today's date: 15th of December >>> Completion Date: 17th of November) The Call Date is always 10 days before the Plan Date.

Note:

Check your Maintenance Plan and adapt it, if necessary, before you schedule it.

Check the following information in the generated Maintenance Order:

number of order operations: 2

Maintenance Plan: number of the previously created Maintenance Plan

Last Included Task List: A / TL-## / 1

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 9 Overview

The goal of this task is to trigger the maintenance schedule you built in Task 8 so that the system generates an actual work order.

You must meet specific scheduling conditions to ensure the right maintenance cycle (the 4- month package) is triggered.

Step 1: Adapt Scheduling Parameters (IP02)

Before starting the schedule, you must ensure the "Call Date" rules are correct.

* Transaction : Enter IP02 (Change Maintenance Plan).

* Maintenance Plan : Enter the number you saved in Task 8 and press Enter .

* Scheduling Parameters Tab :

* Call Horizon : Adjust this so that the Call Date occurs exactly 10 days before the Plan Date.

* Note: If your system uses percentages, you will need to calculate the percentage of the 4-month cycle that results in a 10-day lead time.

* Save your changes.

Step 2: Schedule the Plan (IP10)

Now you will "start" the clock for this maintenance schedule.

* Transaction : Enter IP10 (Schedule Maintenance Plan).

* Maintenance Plan : Enter your plan number and press Enter .

* Start Scheduling : Click the Start icon (or go to Maintenance plan > Scheduling > Start).

* Enter the "Start Date" / "Completion Date" :

* The Rule : You must use Today's date minus 4 weeks .

* Example: If today is April 19, enter March 22.

* Press Enter . The system will calculate the next calls.

* Verify the Package : Ensure the next upcoming call is indeed the 4 MON (4-month) Maintenance Package.

* Save (Floppy Disk icon). This will generate a new Maintenance Order number.

Step 3: Verify the Generated Maintenance Order

You must now check that the order was created correctly based on the rules of your Task List (Task 7) and Maintenance Plan (Task 8).

* Display Order : In IP10 , select the line for the generated call and click the Display Order icon (or use transaction IW33 with the new order number).

* Check the following three items :

* Operations : Verify there are exactly 2 operations in the order (the Monthly and 4-Month tasks).

* Maintenance Plan : Confirm the order shows your specific Maintenance Plan number.

* Task List : Verify the "Last Included Task List" is A / TL-48 / 1 .

NEW QUESTION # 14

Task: 5

Configure and create a Maintenance Notification

The project team evaluates during the implementation project the Maintenance Notifications in SAP S /4HANA Asset Management. The following features need to be checked:

* Configure and create a Maintenance Notification

* Assign catalog specific data to a Maintenance Notification

* Create a Maintenance Notification and save it. Use the following information:

□ * Assign the following data to the just created notification:

□

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 5 Overview

The project team is evaluating Maintenance Notifications in SAP S/4HANA Asset Management. This task involves creating a notification and assigning catalog-specific data to it.

Step 1: Create the Maintenance Notification

In this step, you will record a technical problem in the system.

* Access the Transaction : Use transaction code IW21 (Create Maintenance Notification) in the SAP GUI or the corresponding Fiori app.

* Initial Screen :

* Notification Type : Enter Z1 .

* Press Enter .

* Enter General Data :

* Description : Enter Pump is leaking .

* Priority : Select High .

* Equipment : Enter T-PA48 .

* Save : Click the Save (floppy disk) icon to generate a notification number.

Explanation : Creating a notification is the first step in the maintenance process. It documents the "what" (leaking pump), the "how critical" (high priority), and the "where" (Equipment T-PA48).

Step 2: Assign Catalog Specific Data

Now you must assign technical codes to describe the damage precisely for future reporting and analysis.

* Access the Transaction : Use transaction code IW22 (Change Maintenance Notification) to open your recently created notification.

* Navigate to Item Data : Go to the Items tab or the relevant section for damage and causes.

* Enter Damage Details :

* Damage Code Group : PMP-100 .

* Damage Code : 1000 .

* Description : Leaking .

* Enter Object Part Details :

* Object Part Code Group : PMP-Z48 .

* Object Part Code : 1001 .

* Description : Inlet/Outlet .

* Enter Cause Details :

* Cause Code Group : PMP-248 .

* Cause Code : 2000 .

* Description : Material fatigue .

* Save : Click the Save icon to finalize the notification.

Explanation : Assigning catalog data categorizes the issue using standardized codes. This allows the company to run "Bad Actor" reports later to see, for example, how many pumps are failing due to "Material fatigue" versus "Operator error".

□

NEW QUESTION # 15

.....

Why is the SAP C_S43_2601 test dump chosen by so many IT candidates? Firstly, the high quality and latest material are the important factors of C_S43_2601 vce exam. Besides, time and money can be saved by use of the C_S43_2601 brain dumps. Instant download is available for you, thus you can study as soon as you complete purchase. Moreover, one year free update is the privilege after your purchase. You will get the latest study material for preparation. Hurry up to choose C_S43_2601 Training Pdf, you will success without doubt.

Valid C_S43_2601 Test Practice: https://www.dumpstests.com/C_S43_2601-latest-test-dumps.html

We comprehend your mood and sincerely hope you can pass exam with our C_S43_2601 study materials smoothly, Our training materials can help you learn about the knowledge points of C_S43_2601 exam collection and improve your technical problem-solving skills, The simulation of the actual SAP C_S43_2601 test helps you feel the real C_S43_2601 exam scenario, so you don't face anxiety while giving the final examination, By browsing this website, all there versions of C_S43_2601 training materials can be chosen according to your taste or preference.

Resource Section: Appreciating Diversity, You can also get C_S43_2601 into the more advanced settings, including whether images load automatically, and enabling/disabling JavaScript.

We comprehend your mood and sincerely hope you can pass exam with our C_S43_2601 Study Materials smoothly, Our training materials can help you learn about the knowledge points of C_S43_2601 exam collection and improve your technical problem-solving skills.

New Certification C_S43_2601 Exam 100% Pass | High-quality Valid C_S43_2601 Test Practice: SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601)

The simulation of the actual SAP C_S43_2601 test helps you feel the real C_S43_2601 exam scenario, so you don't face anxiety while giving the final examination.

By browsing this website, all there versions of C_S43_2601 training materials can be chosen according to your taste or preference, Once you learn all C_S43_2601 questions and answers in the study guide, try DumpsTests's innovative testing engine for exam like C_S43_2601 practice tests.
