The customer's sites will continue to run on their proprietary CMS for websites. A customer with an existing AEM implementation wants to enrich product pages with technical data coming from their PIM system. The PIM system sits behind an API Management solution that publicly exposes the PIM API's as RESTful web services with basic authentication as the security mechanism. Data consistency with the PIM and secure access to the APIs are key elements of the integration.

How should the Architect set up the integration between AEM and the PIM?

- A. Import the technical data into the AEM Author and replicate to Publishers
- B. Use a client-side integration with AJAX from the browser to the API Management
- C. Integrate the AEM Publishers directly with the API Management solution
- D. Convert the technical data to Content Fragments and expose using Content Services

Answer: C

Integrate the AEM Publishers directly with the API Management solution. According to Adobe Experience Manager documentation¹, a direct integration between AEM and PIM can enable marketers and creative professionals to manage eCommerce-related product data and photography within AEM. A direct integration can also ensure data consistency with the PIM and secure access to the APIs using basic authentication²³. Option A is the only diagram that shows how AEM Publishers can directly communicate with the API Management solution.

A client is in the discovery process for building a React native app, which is a single codebase that runs natively on iOS and Android. The goal is to reduce development costs. What should the Architect recommend to meet this requirement?

- A. OSGi Bundles

A customer has SSO on its AEM Author environment using Adobe IMS, which is integrated with the customer's IDP using SAML. SAML is a common and standard SSO handler that allows a user to access multiple systems after providing authentication credentials once. AEM ships with a SAML 2.0 Authentication Handler that supports signing and encryption of messages, automatic creation of users, and syncing groups to existing ones in AEM³. By integrating AEM Publisher using SAML directly with the IDP,

the Architect can leverage the existing user accounts and authentication mechanism for the end users of the secured website.
