IIBA Entry Certificate in Business Analysis (ECBA) Sample Questions (Q91-Q96):

NEW QUESTION # 91

While assessing requirements changes, a business analyst (BA) will determine the formality of the assessment process based on:

- A. governance approach.
- B. change strategy.
- **C. business analysis approach.**
- D. potential value.

Answer: C

Explanation:

Business analysts will determine the formality of the assessment process based on the information available, the apparent importance of the change, and the governance process. Many proposed changes may be withdrawn from consideration or declined before any formal approval is required. A predictive approach may indicate a more formal assessment of proposed changes.

NEW QUESTION # 92

What prescribes how information may be derived, inferred or calculated based on information available to the business?

- A. Business case
- B. Business policy
- C. Behavioural business rule
- **D. Definitional business rule**

Answer: D

Explanation:

A definitional business rule prescribes how information may be derived, inferred, or calculated based on existing business data. These rules establish precise meaning and categorization of data, ensuring that terms and concepts are consistently understood and used within the organization.

Examples include:

Calculation rules (e.g., $\text{interest} = \text{principal} \times \text{rate} \times \text{time}$)

Classification rules (e.g., customers with purchases over \$10,000/year are premium) In contrast, behavioral business rules govern constraints or conditions on how actions must be performed.

BABOK Reference:

Discussed under the Strategy Analysis and Requirements Analysis and Design Definition knowledge areas, definitional business rules are explained as fundamental to maintaining business consistency and logical integrity.

NEW QUESTION # 93

When validating requirements, assumptions are:

- A. documented after conducting further analysis.
- B. based and assessed on previous experience.
- C. vital to support strategic decisions and goals.
- **D. defined so that associated risk can be managed.**

Answer: D

Explanation:

7.3 Validate Requirements

7.3.4 Elements

1 Identify Assumptions

These assumptions are identified and defined so that associated risks can be managed.

NEW QUESTION # 94

What is a definitional rule?

- A. A rule that can be violated
- B. An obligation or prohibition of conduct, action, practice, or procedure
- **C. A representation of the operational knowledge of the organization**
- D. A representation of the behavior of people

Answer: C

Explanation:

Definitional rules are a type of business rule that form theories or produce information. They represent something that is fundamentally true or untrue about some concept within the organization. Unlike behavioral rules, which are about people's behavior, definitional rules constitute operational knowledge of the organization. They cannot be violated but can be misused. For instance, a definitional rule might be used to classify different categories of customers based on contractual agreements or order quantities.

NEW QUESTION # 95

When validating requirements, assumptions are:

- A. documented after conducting further analysis.
- B. based and assessed on previous experience.
- C. vital to support strategic decisions and goals.
- **D. defined so that associated risk can be managed.**

Answer: D

Explanation:

When validating requirements, assumptions are defined so that the associated risks can be managed.

Assumptions are considered to be true without proof for the purposes of planning and analysis, but they carry inherent risks if they prove to be incorrect. By defining assumptions clearly, business analysts and project teams can identify potential risks early in the process and develop strategies to address them, ensuring that the project remains on track and can adapt to any changes in circumstances.

References: The importance of managing risks associated with assumptions is discussed in various business analysis resources, including the Business Analysis Body of Knowledge (BABOK) and materials related to the ECBA certification provided by the International Institute of Business Analysis (IIBA). These resources emphasize the need for clear definition and management of assumptions during the requirements validation process¹²³.
