By our Plat-Admn-202 exam questions, you will spend less time on preparing for exam, which means you will have more spare time to do other thing. So do not hesitate and buy our Salesforce Certified Platform App Builder guide torrent.

Salesforce Plat-Admn-202 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Business Logic and Process Automation: This section of the exam measures the skills of Process Automation Specialists and Salesforce Administrators and covers the key tools Salesforce provides to automate and enforce business logic. It focuses on using formula fields, roll-up summary fields, and validation rules to meet defined requirements. Candidates must also understand approval processes and know how to select the right automation tool to prevent conflicts or errors. The domain emphasizes evaluating business requirements and recommending automation solutions that maintain system stability and accuracy.
Topic 2	<ul style="list-style-type: none"> • Data Modeling and Management: This section of the exam measures the skills of Data Analysts and Salesforce Administrators and covers the core principles of designing and maintaining Salesforce data structures. It requires selecting the correct data model in various scenarios and understanding relationship types and how they influence reporting, record access, and the user interface. It also tests knowledge of field data types and the operational impact of changing them. The section includes evaluating the use of Schema Builder and understanding the considerations involved in importing and exporting data across internal and external sources.
Topic 3	<ul style="list-style-type: none"> • Salesforce Fundamentals: This section of the exam measures the skills of Salesforce Administrators and Junior Salesforce Consultants and covers the essential concepts needed to understand how Salesforce works at a foundational level. It focuses on recognizing when to use declarative tools versus programmatic customization, determining when AppExchange apps extend org capabilities, and understanding key methods for managing object, record, and field access. It also evaluates your ability to choose the right sharing model based on business needs and to apply reporting tools effectively, including report types and dashboards. Additionally, the domain reviews how to optimize the mobile experience through actions and layouts, and how Chatter can be used to support collaboration.
Topic 4	<ul style="list-style-type: none"> • User Interface: This section of the exam measures the skills of Salesforce UI Designers and Lightning App Builders and covers the ways in which Salesforce interfaces can be customized to improve usability. It includes understanding available options for UI customization and demonstrating when to apply custom buttons, links, and actions. The domain also distinguishes between declarative and programmatic methods for incorporating Lightning components in applications, ensuring that the right approach is selected for different user interface needs.
Topic 5	<ul style="list-style-type: none"> • App Deployment: This section of the exam measures the skills of Release Managers and Salesforce Administrators and covers the application lifecycle from planning through deployment. It requires determining the appropriate strategy when working with different sandboxes and managing milestones during development. Candidates must know when to use change sets and how to troubleshoot deployment issues. The section also includes understanding the implications of using unmanaged versus managed packages and selecting the correct deployment plan for various business scenarios.

Salesforce Certified Platform App Builder Sample Questions (Q257-Q262):

NEW QUESTION # 257

An app builder at Cloud Kicks has been working on changes to a custom Shoe Sales app in a sandbox and is ready to deploy their changes to production with a change set. Part of the work included updates to a permission set.

What should the app builder take into consideration when deploying the change set to production?

- A. The deployed permission set will only contain changes related to the change set.
- B. The existing permission set will be completely overwritten.
- C. Change to field-level security in the permission set will not be applied.
- D. The deployed permission set will manage with the existing permission set.

Answer: A

Explanation:

Salesforce Help - Permission Sets

NEW QUESTION # 258

Cloud Kicks (CK) wants to set up a custom child object to track gift cards issued to a customer. A key requirement is to track the total number of gift cards opened and gift cards issued on an Account. CK wants to permanently ensure the gift cards are unable to be moved across any other Account once it is created.

On the gift card object, what type of field should be created to support this requirement?

- A. Roll-up summary
- **B. Master-detail relationship**
- C. Lookup relationship
- D. Formula

Answer: B

Explanation:

The app builder should create a master-detail relationship field on the gift card object to support the requirement. A master-detail relationship field creates a parent-child relationship between two objects, where the master record controls certain behaviors of the detail record. In this case, the Account object would be the master and the gift card object would be the detail. By creating a master-detail relationship field, the app builder can meet these requirements:

Track the total number of gift cards opened and gift cards issued on an Account: This can be done by creating roll-up summary fields on the Account object that count or sum up the values from the gift card records related to each account.

Permanently ensure the gift cards are unable to be moved across any other Account once it is created: This can be done by making the master-detail relationship field required on the gift card object, which means that every gift card record must be associated with an account record and cannot be changed once set. Option B, C, and D are not types of fields that can support this requirement.

NEW QUESTION # 259

Universal Containers manages leads in a Lead qualification queue where sales reps can accept ownership of the Lead. Campaign members are required to have a sales owner.

What validation rule should an app builder configure?

- A. AND(ISBLANK(Lead.Owner.Id))
- B. NOT(ISNEW() && ISBLANK(Lead.Owner:Queue.Id))
- **C. AND(ISNEW(), ISBLANK(Lead.Owner:User.Id))**
- D. NOT(ISBLANK(Lead.Owner:Queue.Id))

Answer: C

Explanation:

The validation rule should be AND(ISNEW(), ISBLANK(Lead.Owner:User.Id)). This rule will prevent saving a new lead record if the owner is not a user. This will ensure that campaign members have a sales owner. Option A is incorrect because it will prevent saving any lead record if the owner is blank, which is not the requirement. Option B is incorrect because it will prevent saving an existing lead record if the owner is a queue, which is not the requirement. Option D is incorrect because it will prevent saving any lead record if the owner is a queue, which is not the requirement.

NEW QUESTION # 260

Universal Containers wants to track installation information once it container has been purchased on a custom object. Sales reps should have visibility of all the installation with their opportunities.

visibility of all the installations associated with their opportunities.

What kind of relationship should this new object have to the Opportunity?

- A. Hierarchical
- B. Many to Many
- C. Master-Detail
- **D. Lookup**

Answer: D

Explanation:

The new object should have a lookup relationship to the Opportunity object. A lookup relationship creates a link between two objects and allows related records to be viewed in a related list. This can be used to track installation information for each opportunity and give sales reps visibility of all the installations associated with their opportunities. Option B, C, and D are not appropriate for this requirement.

NEW QUESTION # 261

DreamHouse Realty wants to display a weather map component on a Lightning record page when a house is scheduled for a showing.

How should the app builder meet the requirement?

- A. Field-level security
- **B. Component visibility**
- C. Sharing rules
- D. Field-level field

Answer: B

Explanation:

To display a weather map component on a Lightning record page conditionally:

A. Component visibility should be used. This feature in the Lightning App Builder allows components on a Lightning page to be displayed based on specific criteria, such as field values or user attributes. In this case, the app builder can set the visibility of the weather map component to only appear when a house is scheduled for a showing based on the relevant field values.

For more details on setting up conditional component visibility, review the guide on Dynamic Lightning Pages.

NEW QUESTION # 262

.....

As long as you follow the steps of our Plat-Admn-202 quiz torrent, your mastery of knowledge will be very comprehensive and you will be very familiar with the knowledge points.
