Last but not least, you will get the privilege to enjoy free renewal of our SPLK-1004 Preparation materials during the whole year.

Splunk Core Certified Advanced Power User Sample Questions (Q102-Q107):

NEW QUESTION # 102

Which of these generates a summary index containing a count of events by productId?

- A. | stats sum(productId)
- **B. | stats count by productId**
- C. sistats summary_index by productId
- D. | sistats count by productId

Answer: B

Explanation:

The stats count by productId command counts the number of events for each unique productId, making it the correct command for generating a summary index based on event counts.

NEW QUESTION # 103

Which predefined drilldown token passes a clicked value from a table row?

- A. \$row. <fieldname>\$
- **B. \$rowclick. <fieldname>\$**
- C. \$table .<fieldname>\$
- D. \$tableclick .<fieldname>\$

Answer: B

Explanation:

The predefined drilldown token that passes a clicked value from a table row in Splunk dashboards is \$row.<fieldname>\$ (Option A). This token syntax is used within the drilldown configuration of a dashboard panel to capture the value of a specific field from a row where the user clicks. This value can then be passed to another dashboard panel or used within the same panel to dynamically update the content based on the user's interaction, enhancing the interactivity and relevance of dashboard data presentations.

NEW QUESTION # 104

Which function of the stats command creates a multivalue entry?

- A. mvcombine
- B. eval
- **C. list**
- D. makemv

Answer: C

Explanation:

The list function of the stats command creates a multivalue entry, combining multiple occurrences of a field into a single multivalue field.

NEW QUESTION # 105

Which function of the stats command creates a multivalue entry?

- A. mvcombine
- B. eval
- **C. list**
- D. makemv

Answer: C

Explanation:

The list function of the stats command creates a multivalue entry, combining multiple occurrences of a field into a single multivalue field.

The list function of the stats command creates a multivalue entry by aggregating values from multiple events into a single field. This is particularly useful when you want to group data and collect all matching values into a list.

Here's why this works:

* Purpose of list: The list function collects all values of a specified field for each group and stores them as a multivalue field. For example, if you group by user_id, the list function will create a multivalue field containing all corresponding product values for that user.

* Multivalue Fields: Multivalue fields allow you to handle multiple values within a single field, which can be expanded or manipulated using commands like mvexpand or foreach.

NEW QUESTION # 106

Which element attribute is required for event annotation?

- A. <search type=\$annotation\$>
- B. <search type="annotation">
- C. <search style="annotation">
- D. <search type="event_annotation">

Answer: B

Explanation:

In Splunk dashboards, event annotations require the attribute <search type="annotation"> to define an event annotation, which marks significant events on visualizations like timelines.

NEW QUESTION # 107

.....
