24時間年中無休のサービスオンラインサポートサービスがあります。2V0-13.25ガイドトレントについて質問がある場合は、オンラインでメールまたはお問い合わせください。発生する可能性のある問題を解決するために、プロのスタッフにリモートアシスタンスを提供しています。2V0-13.25試験トレントを使用するたびに、ターゲットサービス、患者の態度、甘い声をお楽しみいただけます。2V0-13.25の質問の7*24*365日オンライン親密なサービス急流があなたを待っています。「常に高品質を追求し、すべてがお客様のためです」は、当社の2V0-13.25試験問題に関する一貫した品質原則です。

VMware 2V0-13.25 認定試験の出題範囲:

トピック	出題範囲

トピック 1	IT Architectures, Technologies, Standards: This section of the exam measures the skills of IT Architects and covers the ability to distinguish business requirements from technical ones. It expects candidates to understand the differences between conceptual, logical, and physical designs while also differentiating requirements, assumptions, constraints, and risks. Core concepts of availability, manageability, performance, recoverability, and security (AMPRS) are tested. Learners also need to document risk mitigation strategies, design decisions, and create a validation strategy that ties requirements to practical implementation.
トピック 2	Install, Configure, Administrate the VMware Solution: This section of the exam is relevant to System Administrators. Although it has no directly testable objectives, it underlines the expectation that candidates are familiar with installation, configuration, and administration tasks that form the foundation for VMware Cloud Foundation solutions.
トピック 3	Troubleshoot and Optimize the VMware Solution: This section of the exam measures the skills of Operations Engineers. There are no explicitly testable objectives provided in this domain, but candidates are expected to understand troubleshooting and optimization principles to maintain the VMware environment effectively in real-world deployments.
トピック 4	Plan and Design the VMware Solution: This section measures the skills of Cloud Infrastructure Designers. It focuses on gathering and analyzing business requirements and then transforming them into conceptual, logical, and physical models of VMware Cloud Foundation. Candidates are expected to identify prerequisites and make design decisions across fleet topologies, networking, management domains, workload domains, automation, and operations. The section also includes designing for availability within and across zones, creating strategies for manageability such as lifecycle, scalability, and capacity, and ensuring performance and recoverability through BCDR strategies. Additional emphasis is given to designing secure environments, workload migration strategies, and creating consumption, automation, and monitoring strategies to support modern applications and governance.
トピック 5	VMware Products and Solutions: This section of the exam evaluates the knowledge of VMware Solution Specialists and focuses on VMware Cloud Foundation (VCF). Candidates must be able to identify and differentiate between various VCF architecture options in given scenarios. The emphasis is on understanding the key products and how they integrate into enterprise design choices.

Pass4Test市場調査によると、2V0-13.25試験の準備をしている多くの人が、試験に関する最新情報を入手したいことがわかっています。すべての候補者の要件を満たすために、私たちはあなたを助けるためにそのような高品質の2V0-13.25学習資料をまとめました。当社VMwareの製品はお客様にとって非常に便利であり、2V0-13.25試験問題よりも優れたVMware Cloud Foundation 9.0 Architect教材を見つけることはできないと考えられています。私たちの学習教材を学ぶために数時間を費やすつもりなら、短時間で試験に合格します。次に、2V0-13.25テストの質問を紹介します。

VMware Cloud Foundation 9.0 Architect 認定 2V0-13.25 試験問題 (Q98-Q103):

質問 #98

An architect is responsible for designing a VMware Cloud Foundation (VCF)-based private cloud for a customer. During the customer requirements gathering workshop, the customer has stated the following:

- * All Platinum applications/services must have an availability SLA of 99.99%.
- * All Gold applications/services must have an availability SLA of 99.9%.
- * All Silver applications/services must have an availability SLA of 99%.
- * The private cloud must have an availability SLA of 99.9%.

What should the architect recommend to meet the stated requirements?

- A. The private cloud SLA can only be met using multiple VMware Cloud Foundation instances configured as a single VCF Fleet.
- B. The Platinum service availability requirements must be met by configuring Proactive High Availability (HA) on the workload domain.
- C. The private cloud must only be used to host Silver and Gold services.
- D. The Platinum service availability requirements must be met by the application.

正解: D

解説:

The overall private cloud SLA is 99.9%, but Platinum applications require 99.99%, which exceeds the infrastructure SLA. VMware design methodology states:

* If an application's SLA is higher than the infrastructure SLA, then the application itself must provide the additional resilience (e.g., clustering, active-active deployment, or application-level HA).

* Options A and B reduce flexibility or impose unnecessary complexity.

* Option D (Proactive HA) improves resiliency but cannot guarantee 99.99%, since Proactive HA still depends on underlying infrastructure SLA.

Therefore, the only valid recommendation is that Platinum workloads must implement resilience at the application layer.

質問 # 99

Which Broadcom products are necessary for a VMware environment that handles large-scale data processing?

- A. Broadcom NVMe SSD
- B. Broadcom 25GbE Ethernet Adapter
- C. vSAN
- D. Broadcom RAID Controller

正解: A、B、D

解説:

Broadcom RAID Controllers, 25GbE Ethernet Adapters, and NVMe SSDs are critical for handling large-scale data processing in VMware environments.

質問 # 100

Which statement would the architect document as a design decision within the logical design?

- A. vSphere High Availability (HA) will be enabled.
- B. The VMware Distributed Resource Scheduler (DRS) latency sensitivity value will be set to high for the workload cluster.
- C. The solution must provide the ability to patch an existing template.
- D. Service Levels will align with the defined Business Impact Analysis findings.

正解: B

質問 # 101

Which VMware tools are critical for managing multi-cloud environments in VMware Cloud Foundation?

- A. VMware NSX
- B. VMware vSphere
- C. VMware HCX
- D. VMware vRealize Automation

正解: C、D

解説:

VMware vRealize Automation and HCX are critical for managing multi-cloud environments in VMware Cloud Foundation.

質問 # 102

Which VMware tools facilitate monitoring of network traffic and security in VMware Cloud Foundation?

- **A. VMware vRealize Operations**
- B. VMware vSphere
- C. VMware vSAN
- **D. VMware NSX**

正解： A、D

解説:

VMware NSX and vRealize Operations are essential for network traffic and security monitoring.

質問 # 103
