Best of luck in Salesforce Plat-Dev-201 exam and professional career!!!

## Salesforce Certified Platform Developer Sample Questions (Q132-Q137):

### NEW QUESTION # 132

Universal Containers recently transitioned from Classic to Lightning Experience. One of its business processes requires certain value from the opportunity object to be sent via HTTP REST callout to its external order management system based on a user-initiated action on the opportunity page.

Example values are as follow:

Name

Amount

Account

Which two methods should the developer implement to fulfill the business requirement? (Choose 2 answers)

- A. Create a Visualforce page that performs the HTTP REST callout, and use a Visualforce quick action to expose the component on the Opportunity detail page.
- B. Create an after update trigger on the Opportunity object that calls a helper method using `@Future(Callout=true)` to perform the HTTP REST callout.
- C. Create a Process Builder on the Opportunity object that executes an Apex immediate action to perform the HTTP REST callout whenever the Opportunity is updated.
- D. Create a Lightning component that performs the HTTP REST callout, and use a Lightning Action to expose the component on the Opportunity detail page.

Answer: A,D

### NEW QUESTION # 133

A developer is creating a Lightning web component to show a list of sales records.

The Sales Representative user should be able to see the commission field on each record. The Sales Assistant user should be able to see all fields on the record except the commission field.

How should this be enforced so that the component works for both users without showing any errors?

- A. Use `WITH SECURITY_ENFORCED` in the SOQL that fetches the data for the component.
- B. Use Lightning Locker Service to enforce sharing rules and field-level security.
- C. Use Lightning Data Service to get the collection of sales records.
- D. Use `Security.stripInaccessible` to remove fields inaccessible to the current user.

Answer: D

### NEW QUESTION # 134

Which two statements are true about using the `@testSetup` annotation in an Apex test class?

Choose 2 answers

- A. Records created in the test setup method cannot be updated in individual test methods.
- B. A method defined with the `@testSetup` annotation executes once for each test method in the test class and counts towards system limits.
- C. Test data is inserted once for all test methods in a class.
- D. The `@testSetup` annotation is not supported when the `GetTest(SeeAllData=True)` annotation is used.

Answer: B,D

### NEW QUESTION # 135

Universal Containers has large number of custom applications that were built using a third-party JavaScript framework and exposed using Visualforce pages. The Company wants to update these applications to apply styling that resembles the look and feel of Lightning Experience. What should the developer do to fulfill the business request in the quickest and most effective manner?
