## Juniper Mist AI Wireless, Specialist (JNCIS-MistAI-Wireless) Sample Questions (Q74-Q79):

### NEW QUESTION # 74

An administrator is configuring a WLAN for IoT devices that require a simple, shared password.

They also want to prevent these low-trust devices from communicating with each other to limit the potential impact of a compromised device.

Which WLAN feature should be enabled to prevent direct communication between clients on the same WLAN?

- A. Client Isolation

- B. AirWatch Integration
- C. Geofencing
- D. Band Steering

**Answer: A**

#### NEW QUESTION # 75

All the access points (APs) on the site will obtain an IP address for the Management VLAN. You notice an additional IP address for each configured VLAN on the AP.

Which statement is correct in this scenario?

- A. The AP MAC has a DHCP reservation.
- B. This behavior is enabled by default under the Site configuration.
- C. The Local Status Page has been enabled in the AP setting under the Site configuration.
- D. The AP is configured to support wireless mesh.

**Answer: C**

Explanation:

According to the Mist documentation<sup>1</sup>, a Mist AP will pull a management IP address from the Native VLAN by default. However, if the Local Status Page is configured for the Site, all the site APs will pull their own IP address from the Management VLAN, but also addresses for each of the VLANs configured on the AP. This is because each AP creates a Switch Virtual Interface (SVI) for each VLAN on its eth0 interface.

The Local Status Page is a feature that allows you to access information about an AP's status and configuration through a web browser by connecting to its IP address<sup>2</sup>. This feature can be enabled or disabled at the site level under Site Settings > Access Points > Advanced Settings.

#### NEW QUESTION # 76

A retail company wants to use a single SSID for all their handheld scanner devices across all stores. For security and management, each individual scanner must have its own unique pre- shared key. The company has hundreds of scanners.

Which Mist feature is designed to handle this requirement in a scalable manner?

- A. Multiple Pre-Shared Keys (MPSK)
- B. WPA2-Enterprise with 802.1X
- C. A WxLAN policy with MAC address-based rules
- D. A captive portal with sponsored guest access

**Answer: A**

#### NEW QUESTION # 77

You have four actions presented to you by Marvis. Three of these actions are found under the AP category.

Upon inspecting the category, you notice that the sub-categories in the AP category contain a lock symbol so that you cannot select any of the sub-categories to view the root cause. In this scenario, which statement is correct?

- A. You need to enable Marvis Minis.
- B. A subscription is needed.
- C. It takes more time for the root cause report to be prepared by Marvis Actions.
- D. The issue was identified as an AP issue, but Marvis Actions could not find the actual root cause.

**Answer: B**

#### NEW QUESTION # 78

Which two statements are correct regarding the physical properties of 2.4 GHz versus 5 GHz Wi-Fi signals? (Choose 2.)

- A. 2.4 GHz signals generally provide longer range and better penetration through solid objects than 5 GHz signals.

- B. Both bands are equally susceptible to interference from Bluetooth devices.
- C. 2.4 GHz signals have a shorter wavelength and attenuate more quickly than 5 GHz signals.
- D. The 2.4 GHz band offers more available non-overlapping channels than the 5 GHz band.
- E. 5 GHz signals have a shorter wavelength and are more easily absorbed by obstacles like walls and water.

Answer: A,E

## NEW QUESTION # 79

.....
