Esri Enterprise Administration Professional 2201 Sample Questions (Q62-

Q67):

NEW QUESTION # 62

A new user is added to the organization and can see roads, building footprints, parcels, and traffic data shared with them in Portal for ArcGIS. However, the user cannot use analysis tools in the portal, even though the SpatialAnalysisTools service is verified to be running.

What is causing this issue?

- A. The new user is a Creator user type
- B. SpatialAnalysisTools needs to be restarted
- C. The service needs to be published as a hosted layer
- D. The hosting server has not been configured

Answer: A

NEW QUESTION # 63

A GIS administrator works for the Department of Transportation. Users need to analyze decades of traffic and crash data to determine the interstates with the most incidents. They will also analyze when certain vehicles were speeding and braking, and then correlate this data with vehicular accident locations.

Which server must be configured to support this workflow?

- A. GeoAnalytics Server
- B. GeoEvent Server
- C. Notebook Server

Answer: B

NEW QUESTION # 64

A GIS administrator must restore an ArcGIS Enterprise deployment from a backup file previously created by the webgisdr utility. Which utility should the administrator run first?

- A. restore
- B. webgisdr
- C. restoredatastore

Answer: B

Explanation:

The webgisdr utility is the official tool used to both back up and restore ArcGIS Enterprise deployments.

When restoring a backup, this tool ensures all components-Portal for ArcGIS, ArcGIS Server (federated), ArcGIS Data Store, and associated configurations-are restored in the correct sequence and with integrity.

The utility reads from a configuration file that defines the backup location, type, and parameters. webgisdr orchestrates the entire restoration process automatically. Running restoredatastore (Option B) individually is not required and may only restore part of the deployment, such as the relational store. Restore (Option C) is not a valid utility for ArcGIS Enterprise.

Reference Source: ArcGIS Enterprise documentation - Web GIS Disaster Recovery tool (webgisdr)

NEW QUESTION # 65

A GIS analyst is running raster analysis in the ArcGIS Enterprise portal Map Viewer. The input data is an image layer, but the output of the raster analysis is a feature layer.

Which ArcGIS Server will host the output feature service?

- A. ArcGIS Hosting Server site
- B. ArcGIS Image Hosting Server site
- C. ArcGIS Raster Analytics Server site

Answer: B

NEW QUESTION # 66

An ArcGIS Enterprise administrator wants to publish their feature classes as layers in bulk from a registered geodatabase. Which action should the administrator perform?

- A. Create a data store item in the ArcGIS Enterprise portal
- B. Import an SDE connection file into ArcGIS Server Administrator Directory
- C. Register the geodatabase in ArcGIS Server Manager
- D. Register as a hosted layer in ArcGIS Data Store

Answer: C

Explanation:

To publish feature classes as services in bulk from an enterprise geodatabase, it must first be registered with the ArcGIS Server site. This registration tells ArcGIS Server where to access the data directly for referenced service publishing. The proper way to do this is through ArcGIS Server Manager.

From ArcGIS Enterprise documentation:

"To publish layers directly from a registered enterprise geodatabase without copying data, you must register the geodatabase with your ArcGIS Server site using ArcGIS Server Manager."

* Option B is used for hosted services, not referenced publishing.

* Option C is not the correct interface for registering data sources.

* Option D involves hosting data, which is not applicable for referenced layers from a geodatabase.
