AZ-140 Valid Test Camp, Latest AZ-140 Exam Camp

Our AZ-140 practice materials will help you pass the AZ-140 exam with ease. The industry experts hired by AZ-140 study materials explain all the difficult-to-understand professional vocabularies by examples, diagrams, etc. All the languages used in AZ-140 real test were very simple and easy to understand. With our AZ-140 Study Materials, you don't have to worry about that you don't understand the content of professional books. You also don't need to spend expensive tuition to go to tutoring class. AZ-140 test engine can help you solve all the problems in your study.

Earning the Microsoft AZ-140 Certification provides IT professionals with a competitive edge in the job market. Configuring and Operating Microsoft Azure Virtual Desktop certification demonstrates their expertise in deploying and managing virtual desktop solutions in the cloud, which is increasingly in demand in the modern workplace. Employers value professionals with Azure Virtual Desktop expertise as they can help organizations improve their productivity, reduce costs, and enhance security.

Microsoft Configuring and Operating Microsoft Azure Virtual Desktop Sample Questions (Q199-Q204):

NEW QUESTION # 199

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have the following:

- * A Microsoft 365 E5 tenant
- * An on-premises Active Directory domain

- * A hybrid Azure Active Directory (Azure AD) tenant
- * An Azure Active Directory Domain Services (Azure AD DS) managed domain
- * An Azure Virtual Desktop deployment

The Azure Virtual Desktop deployment contains personal desktops that are hybrid joined to the on-premises domain and enrolled in Microsoft Intune.

You need to configure the security settings for the Microsoft Edge browsers on the personal desktops.

Solution: You configure a compliance policy in Intune.

Does this meet the goal?

- **A. No**
- B. Yes

Answer: A

Explanation:

Explanation

You need to configure a Configuration Profile in Intune or use Group Policy.

NEW QUESTION # 200

You have an Azure subscription that contains a virtual network named VNet1, a storage account named storage1, and five Azure Virtual Desktop session hosts. VNet1 and storage1 are in the East US Azure region.

The session hosts are connected to VNet1.

In storage1, you create an Azure Files share named share1.

You need to ensure that the session hosts connect to share1 by using the Microsoft backbone network.

Solution: You add a service endpoint to VNet1.

Does this meet the goal?

- **A. No**
- B. Yes

Answer: A

NEW QUESTION # 201

You have an Azure virtual machine named VM1 that runs Windows 10 Enterprise multi-session.

You plan to add language packs to VM1 and create a custom image of VM1 for a Windows Virtual Desktop host pool.

You need to ensure that modern apps can use the additional language packs when you deploy session hosts by using the custom image.

Which command should you run first? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

☐

Answer:

Explanation:

☐

Explanation

☐

NEW QUESTION # 202

Case Study 1 - Contoso, Ltd

Overview

Contoso, Ltd. is a law firm that has a main office in Montreal and branch offices in Paris and Seattle. The Seattle branch office opened recently.

Contoso has an Azure subscription and uses Microsoft 365.

Existing Infrastructure. Active Directory

The network contains an on-premises Active Directory domain named contoso.com and an Azure Active Directory (Azure AD) tenant. One of the domain controllers runs as an Azure virtual machine and connects to a virtual network named VNET1. All internal

name resolution is provided by DNS server that run on the domain controllers.

The on-premises Active Directory domain contains the organizational units (OUs) shown in the following table.

□ The on-premises Active Directory domain contains the users shown in the following table.

□ The Azure AD tenant contains the cloud-only users shown in the following table.

□ Existing Infrastructure. Network Infrastructure

All the Azure virtual networks are peered. The on-premises network connects to the virtual networks.

All servers run Windows Server 2019. All laptops and desktop computers run Windows 10 Enterprise.

Since users often work on confidential documents, all the users use their computer as a client for connecting to Remote Desktop Services (RDS).

In the West US Azure region, you have the storage accounts shown in the following table.

□ Existing Infrastructure. Remote Desktop Infrastructure

Contoso has a Remote Desktop infrastructure shown in the following table.

□ Requirements. Planned Changes

Contoso plans to implement the following changes:

- Implement FSLogix profile containers for the Paris offices.
- Deploy a Azure Virtual Desktop host pool named Pool4.
- Migrate the RDS deployment in the Seattle office to Azure Virtual Desktop in the West US Azure region.

Requirements. Pool4 Configuration

Pool4 will have the following settings:

- Host pool type: Pooled
- Max session limit: 7
- Load balancing algorithm: Depth-first
- Images: Windows 10 Enterprise multi-session
- Virtual machine size: Standard D2s v3
- Name prefix: Pool4
- Number of VMs: 5
- Virtual network: VNET4

Requirements. Technical Requirements

Contoso identifies the following technical requirements:

- Before migrating the RDS deployment in the Seattle office, obtain the recommended deployment configuration based on the current RDS utilization.
- For the Azure Virtual Desktop deployment in the Montreal office, disable audio output in the device redirection settings.
- For the Azure Virtual Desktop deployment in the Seattle office, store the FSLogix profile containers in Azure Storage.
- Enable Operator2 to modify the RDP Properties of the Azure Virtual Desktop deployment in the Montreal office.
- From a server named Server1, convert the user profile clicks to the FSLogix profile containers.
- Ensure that the Pool1 virtual machines only run during business hours.
- Use the principle of least privilege.

You need to configure the device redirection settings. The solution must meet the technical requirements.

Where should you configure the settings?

- A. MontrealUsers
- B. Group1
- **C. Pool1**
- D. Workspace1

Answer: C

NEW QUESTION # 203

You have an Azure virtual machine named VM1 that runs Windows 10 Enterprise multi-session.

You plan to add language packs to VM1 and create a custom image of VM1 for a Windows Virtual Desktop host pool.

You need to ensure that modern apps can use the additional language packs when you deploy session hosts by using the custom image.

Which command should you run first? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.
