

Reading The Reliable 4A0-113 Exam Test Means that You Have Passed Half of Nokia OSPF Routing Protocol Exam

2025 Latest Pass4Test 4A0-113 PDF Dumps and 4A0-113 Exam Engine Free Share: https://drive.google.com/open?id=1LJ25_H4MRsMx9wGsm5Yef3WoOwb5VO_5

Pass4Test is a leading platform that has been helping the Nokia 4A0-113 exam candidates for many years. Over this long time period, countless Nokia 4A0-113 exam candidates have passed their dream Nokia OSPF Routing Protocol Exam (4A0-113) certification and they all got help from valid, updated, and real Nokia OSPF Routing Protocol Exam (4A0-113) exam questions. So you can also trust the top standard of Nokia 4A0-113 exam dumps and start 4A0-113 practice questions preparation without wasting further time.

The Nokia OSPF Routing Protocol Exam certification exam covers topics such as OSPF routing principles, OSPF network design and configuration, OSPF protocol operation and troubleshooting, and OSPF security and authentication. It is an advanced-level exam that requires a solid understanding of network routing and OSPF concepts. Passing 4A0-113 Exam demonstrates a high level of expertise in OSPF routing protocol, making it a valuable certification for network professionals seeking to advance their careers in the networking industry.

New Reliable 4A0-113 Exam Test 100% Pass | High Pass-Rate 4A0-113: Nokia OSPF Routing Protocol Exam 100% Pass

The Nokia OSPF Routing Protocol Exam (4A0-113) study material of Pass4Test is available in three different and easy-to-access formats. The first one is printable and portable Nokia OSPF Routing Protocol Exam (4A0-113) PDF format. With the PDF version, you can access the collection of actual Nokia 4A0-113 Questions with your smart devices like smartphones, tablets, and laptops.

Nokia OSPF Routing Protocol Exam Sample Questions (Q22-Q27):

NEW QUESTION # 22

Which of the following statements best describes the function of an OSPF Type 4 LSA?

- A. A Type 4 LSA is originated by an ABR that is connected to a stub area. The LSA is injected into the stub area to provide routing information.
- B. A Type 4 LSA is originated by an ABR that is connected to a stub area. The LSA is injected into the backbone area to

provide routing information.

- C. A Type 4 LSA is originated by an ASBR to describe a route to itself to routers outside the area.
- D. A Type 4 LSA is originated by an ABR to describe a route to an ASBR to routers outside the area.

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

From Nokia 7750 SR OS Routing Protocols Guide (OSPF ASBR Summary LSA):

Type 4 LSAs (ASBR Summary LSAs) are originated by ABRs.

They inform routers in other areas about how to reach the ASBR (not about external prefixes, but about the ASBR's router ID).

Thus, correct answer: A.

-

NEW QUESTION # 23

Which of the following statements regarding OSPF routing updates on a point-to-point link is true?

- A. On a point-to-point link, a DR and BDR are elected. The DR sends link-state advertisements describing the network.
- B. On a point-to-point link, a DR and BDR are elected. To ensure resiliency, both the DR and BDR send link-state advertisements describing the network.
- C. On a point-to-point link, there is no need for a DR and BDR election; all routing updates are sent to 224.0.0.5.
- D. On a point-to-point link, there is no need for a DR and BDR election. All routing updates are sent to the unicast address of the neighbor's interface.

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

From Nokia 7750 SR OS Routing Protocols Guide (OSPF Network Types):

On point-to-point links:

No DR/BDR election occurs.

Updates are sent to multicast address 224.0.0.5 (AllSPFRouters).

Thus, correct answer: A.

NEW QUESTION # 24

Which of the following OSPF area types are supported by the Alcatel- Lucent 7750 SR? Choose two answers.

- A. Not so stubby areas
- B. Stub areas
- C. Partially stubby areas
- D. Level 2 areas
- E. Level 1 area WC

Answer: A,B

NEW QUESTION # 25

Which of the following statements apply to link state protocol behavior? Choose three answers.

- A. The sequence number for an update is incremented as it is flooded from router to router.
- B. The topological database is the same for all routers in a single area.
- C. Information about directly connected links is sent to all neighbors.
- D. Routers broadcast the entire route table to all neighbors.
- E. An adjacency database is maintained by each router.

Answer: B,C,E

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

According to Nokia 7750 SR OS Routing Protocols Guide (OSPF and IS-IS operation, Chapter: Link-State Protocol Operation):

B (Correct):

"Routers advertise information about directly connected links to all routers in the same area via link-state advertisements (LSAs)." C (Correct):

"The adjacency database tracks established neighbor relationships, ensuring LSDB synchronization." E (Correct):

"All routers within the same OSPF or IS-IS area have identical link-state databases after full synchronization." Incorrect options:

A: Link-state protocols exchange only link-state information, not full routing tables (that's distance-vector behavior).

D: Sequence numbers are incremented by the originator when generating LSAs, not by intermediate routers during flooding.

NEW QUESTION # 26

Click the exhibit button.

Router 13.0.0.2		Router 13.0.0.1	
•OSPF Version	: 2	•OSPF Version	: 2
•Router Id	: 13.0.0.2	•Router Id	: 13.0.0.1
•Area Id	: 0.0.0.0	•Area Id	: 0.0.0.0
•Checksum	: 7c0e	•Checksum	: 865e
•Authentication	: Null	•Authentication	: Null
•Authentication Key:	00 00 00 00 00 00 00 00 00	•Authentication Key:	00 00 00 00 00 00 00 00 00
•Packet Type	: DR_DESC	•Packet Type	: DR_DESC
•Packet Length	: 32	•Packet Length	: 32
•		•	
•Interface MTU	: 9000	•Interface MTU	: 9000
•Options	: 000042	•Options	: 000042
•Flags	: 7	•Flags	: 7
•Sequence Num	: 77793	•Sequence Num	: 75667

The OSPF packets shown have been exchanged between two neighbors. What state is the OSPF adjacency in?

- A. The adjacency is in the exchange state. The next step is to exchange link state request and link state update packets.
- B. The adjacency state is full. The routers are exchanging database description packets to notify each other that all link state advertisements have been received.
- C. The adjacency is in the ex start state. The routers have exchanged database description packets, but still have to negotiate the starting sequence number.
- D. The adjacency state is two way because both routers have received a database description packet.

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

From Nokia 7750 SR OS OSPF Guide - OSPF Neighbor State Machine Section:

"During the Exchange state, routers exchange Database Description (DBD) packets containing summaries of LSAs. Sequence numbers and flags are used to coordinate this exchange." Both routers are sending DR_DESC (Database Description) packets.

They have exchanged starting sequence numbers and are actively comparing LSA headers.

Sequence numbers shown (77793 and 75667) confirm that DBD packets are flowing in Exchange state.

Thus, correct answer is B.

NEW QUESTION # 27

.....

Nowadays in this information-based world the definition of the talents has changed a lot and the talents mean that the personnel boost both the knowledge in 4A0-113 area and the practical abilities now. With our 4A0-113 exam braindumps, you can get what you want. Our 4A0-113 Study Materials are easy to be mastered and boost varied functions. We compile Our 4A0-113 preparation questions elaborately and provide the wonderful service to you thus you can get a good learning and preparation for the exam.
