Salesforce Certified Platform User Experience Designer Sample Questions

(Q206-Q211):

NEW QUESTION # 206

A UX Designer wants to communicate the value of diversity, inclusion, and equality in design. Which business outcomes represent these values?

- A. Inclusive recruitment, lower market share, and less employee turnover
- **B. Economic growth, greater market share, and less employee turnover**
- C. Critical investing, more employee turnover, and greater market share

Answer: B

Explanation:

Diversity, inclusion, and equality in design are values that aim to create products, services, and environments that are accessible, welcoming, and fair for all people, regardless of their age, gender, ethnicity, disability, sexual orientation, religion, or other characteristics. Diversity, inclusion, and equality in design can also bring positive business outcomes, such as economic growth, greater market share, and less employee turnover¹².

Economic growth is a business outcome that represents the increase in the value of goods and services produced by an organization or a country over time. Economic growth can be influenced by various factors, such as innovation, productivity, efficiency, and competitiveness. Diversity, inclusion, and equality in design can contribute to economic growth by fostering creativity, innovation, and problem-solving, as well as by attracting and retaining diverse talent, customers, and partners¹².

Greater market share is a business outcome that represents the percentage of sales or customers that an organization has in a particular market or industry. Greater market share can indicate the success and competitiveness of an organization, as well as its potential for growth and profitability. Diversity, inclusion, and equality in design can help achieve greater market share by expanding the reach and appeal of products, services, and environments to diverse and underserved markets, as well as by enhancing customer satisfaction, loyalty, and advocacy¹².

Less employee turnover is a business outcome that represents the rate at which employees leave an organization and are replaced by new ones. Less employee turnover can indicate the stability and quality of an organization, as well as its ability to retain and develop its human capital. Diversity, inclusion, and equality in design can help reduce employee turnover by creating a positive and inclusive work culture, where employees feel valued, respected, and engaged, as well as by providing opportunities for learning, development, and career progression¹².

NEW QUESTION # 207

Cloud Kicks wants to create a site for its customers to manage events regardless of the device they are using. Which best practice should be used to provide this experience?

- A. Develop a separate native mobile app for Android and iOS.
- **B. Create a responsive user interface.**
- C. Launch two different interfaces from the same page.

Answer: B

Explanation:

A responsive user interface is a type of user interface that adapts to different screen sizes, resolutions, orientations, and devices, such as desktops, laptops, tablets, and smartphones. It uses flexible layouts, grids, images, and media queries to optimize the user experience and ensure usability, accessibility, and performance across different devices. A responsive user interface can help Cloud Kicks create a site for its customers to manage events regardless of the device they are using, as it can provide a consistent and seamless experience that meets the user needs and expectations. A responsive user interface can also reduce the development and maintenance costs and efforts, as it can use the same code base and content for different devices, rather than creating separate versions for each device. Reference:

1: User Experience Designer Certification Prep: Module 5: Design User Interfaces

2: User Experience Designer Certification Prep: Module 7: Implement User Interfaces

3: What is Responsive Web Design?

To create a site for its customers to manage events regardless of the device they are using, Cloud Kicks should use the best practice of creating a responsive user interface. A responsive user interface is one that adapts to the screen size and orientation of the device, providing an optimal viewing and interaction experience for the user. A responsive user interface can use the same code base and content for different devices, reducing the development and maintenance costs and ensuring consistency and accessibility. A responsive user interface can also leverage the features and capabilities of the device, such as touch, gestures, camera, etc., to enhance the user experience.

Responsive User Interface

NEW QUESTION # 208

Cloud Kicks (CK) has a new Portal landing page built with Experience Builder. Upon review, CK does not think the company's brand experience is translated into the user experience; however, CK does confirm the Theme was set up correctly. Which additional UX elements should be reviewed to influence the brand experience?

- A. Visual, Content, and Interaction Design
- B. Shapes, Interaction Design, and Typography
- C. Visual Design, Harmony, and Responsiveness

Answer: A

Explanation:

The additional UX elements that should be reviewed to influence the brand experience are visual, content, and interaction design. These elements are essential for creating a consistent, engaging, and memorable user experience that reflects the company's brand identity and values¹².

Visual design refers to the use of colors, shapes, typography, images, icons, and other graphical elements to create a visual hierarchy, contrast, balance, and harmony on the page¹³. Visual design affects the user's perception, emotion, and attention, and can communicate the brand's personality, tone, and message¹³. For example, Cloud Kicks can use their logo, color scheme, and font to create a recognizable and distinctive visual identity for their portal landing page⁴.

Content design refers to the creation, organization, and presentation of text, audio, video, and other media to convey the brand's value proposition, story, and information to the user¹⁵. Content design affects the user's understanding, interest, and trust, and can communicate the brand's purpose, benefits, and voice¹⁵. For example, Cloud Kicks can use clear, concise, and compelling headlines, subheadings, and body text to highlight their products, services, and customer testimonials on their portal landing page.

Interaction design refers to the design of the user interface elements, such as buttons, links, menus, forms, and sliders, that enable the user to interact with the page and perform tasks¹. Interaction design affects the user's behavior, satisfaction, and feedback, and can communicate the brand's functionality, usability, and responsiveness¹. For example, Cloud Kicks can use intuitive, consistent, and accessible navigation, search, and filtering options to help the user find what they are looking for on their portal landing page.

By reviewing and improving these UX elements, Cloud Kicks can ensure that their portal landing page delivers a positive and coherent brand experience to their users, and that their brand identity is translated into the user experience.

NEW QUESTION # 209

How should a UX designer differentiate between a voice and a tone?

- A. Voice reflects the frequency and tone is one's pitch
- B. Voice reflects the character and tone is one's strength
- C. Voice reflects the personality and tone is the way ones speaks
- D. Voice reflects the expression and the tone is the way one designs

Answer: C

Explanation:

Voice is the overall personality of the design, while tone is the way that personality is expressed. Voice represents the core characteristics of a design, such as the values, attitude, and emotions it conveys. Tone is how those characteristics are expressed in the design, such as the language, visuals, and other elements. For example, a design with a friendly voice might be expressed through warm colors, friendly imagery, and casual language. Salesforce has some great resources on voice and tone such as [1] and [2].

NEW QUESTION # 210

Cloud Kicks has a content-rich set of record pages and wants its UX Design team to organize and consolidate them. Which Salesforce Lightning Design System (SLDS) component should be used to organize and consolidate content?

- A. Modals
- **B. Q Tabs**
- C. Data Tables

Answer: B

Explanation:

Q Tabs are a type of SLDS component that can be used to organize and consolidate content on a record page. Q Tabs are a variant of the Tabs component that are designed for use in the Lightning App Builder. Q Tabs allow users to switch between different views of related information within the same context. Q Tabs can also be nested to create subtabs within a tab. Q Tabs can help UX designers to create content-rich record pages that are easy to navigate and consume. Q Tabs can also help to reduce clutter and scrolling on a record page by grouping related content into tabs. Q Tabs can be customized with different icons, labels, and badges to indicate the type and status of the content in each tab. Q Tabs can also be configured to load content dynamically or on demand, which can improve the performance and user experience of the record page.
