NEW QUESTION # 190

A patient is prescribed Prilosec capsules for gastroesophageal reflux disease. If the patient is unable to swallow capsules, they may:

- **A. open the capsules and sprinkle the medication on applesauce.**
- B. allow the capsules to dissolve under their tongue.
- C. chew and swallow the capsules.
- D. compound the capsules into a topical preparation.

Answer: A

Explanation:

Prilosec (Omeprazole) is a delayed-release proton pump inhibitor (PPI) used for GERD, ulcers, and acid reflux. It comes in capsules containing enteric-coated granules, designed to protect the medication from stomach acid and ensure proper absorption.

* Prilosec capsules contain enteric-coated granules that are safe to sprinkle on soft foods without chewing.

* Applesauce is an ideal option because it does not interfere with drug absorption or stability.

* B. Chew and swallow the capsules## Incorrect

* Chewing destroys the enteric coating, leading to premature drug release and degradation by stomach acid.

* C. Compound the capsules into a topical preparation## Incorrect

* Prilosec is not formulated for topical use. The medication must reach the stomach intact for proper effect.

* D. Allow the capsules to dissolve under the tongue## Incorrect

* Sublingual administration is ineffective because omeprazole is not absorbed through the mucous membranes and needs enteric

protection.

- * FDA Omeprazole Medication Guide- States that the contents can be sprinkled on applesauce.
- * ISMP Safe Medication Use Guidelines- Emphasizes proper administration of delayed-release capsules.
- * PTCA PTCE Exam Content Outline- Covers modified-release formulations and proper drug administration techniques.
