## SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition Sample Questions (Q10-Q15):

### NEW QUESTION # 10

How can you assign an authorization to a user?

- A. The authorization is associated with a role that has to be assigned to the user master record.
- B. The user has to be assigned to a user group that contains a role profile including the authorization.
- C. The user has to be assigned to the authorization profile in SAP IMG.
- D. The authorization has to be assigned to both the user master record and the role profile.

**Answer: A**

Explanation:

In SAP S/4HANA Cloud, private edition, authorizations are managed through roles assigned to user master records. This approach streamlines permission management and ensures users have appropriate access rights.

### NEW QUESTION # 11

Through which tools can you launch the Cloud Integration Automation service? Note: There are 2 correct answers to this question.

- A. SAP Solution Manager
- B. SAP Business Accelerator Hub
- C. SAP Cloud ALM
- D. SAP for Me

**Answer: C,D**

Explanation:

The Cloud Integration Automation service facilitates the integration of SAP cloud solutions. It can be launched through the following tools:

Option A: SAP for Me

This option is correct. SAP for Me is a customer portal that provides access to various SAP services, including the Cloud Integration Automation service.

Option B: SAP Solution Manager

This option is incorrect. SAP Solution Manager is primarily used for application lifecycle management and does not directly launch the Cloud Integration Automation service.

Option C: SAP Business Accelerator Hub

This option is incorrect. SAP Business Accelerator Hub is a repository for APIs and does not provide access to the Cloud Integration Automation service.

Option D: SAP Cloud ALM

This option is correct. SAP Cloud ALM is an application lifecycle management tool for cloud solutions and provides access to the Cloud Integration Automation service.

The Cloud Integration Automation Service (CIAS) is a tool within the RISE with SAP framework that automates the setup and configuration of integrations between SAP S/4HANA Cloud Private Edition and other SAP solutions (e.g., SAP SuccessFactors, SAP Ariba). It simplifies integration tasks by providing guided workflows. Let's evaluate the options:

\* A. SAP for Me: This is correct. SAP for Me is a customer portal that provides access to various SAP services, including tools like the Cloud Integration Automation Service. It serves as a central entry point for managing licenses, systems, and integration workflows, especially under RISE with SAP.

\* B. SAP Solution Manager: This is incorrect. SAP Solution Manager is an on-premise tool for managing SAP implementations, primarily for traditional systems like ECC. While it supports integration monitoring, it is not a launch point for CIAS, which is cloud-focused and tied to newer SAP platforms.

\* C. SAP Business Accelerator Hub: This is incorrect. The SAP Business Accelerator Hub (formerly SAP API Business Hub)

provides access to APIs, integration content, and accelerators, but it does not directly launch CIAS. It's a resource for discovering integration options, not executing them.

\* D. SAP Cloud ALM: This is also correct. SAP Cloud ALM (Application Lifecycle Management) is a cloud-based tool for managing the lifecycle of SAP solutions, including SAP S/4HANA Cloud Private Edition. It integrates with CIAS to launch and execute integration workflows, particularly during implementation and operations phases.

In summary, SAP for Me and SAP Cloud ALM are the tools through which you can launch the Cloud Integration Automation Service. References:

\* SAP Help Portal: "SAP Cloud ALM - Cloud Integration Automation" ([help.sap.com](https://help.sap.com))

## NEW QUESTION # 12

Where can you find pre-delivered integration content? Note: There are 3 correct answers to this question.

- A. SAP Cloud ALM
- B. Cloud Integration Automation service
- C. SAP Business Accelerator Hub
- D. SAP Help Portal
- E. SAP Discovery Center

**Answer: C,D,E**

Explanation:

Pre-delivered integration content is essential for streamlining the integration of SAP S/4HANA Cloud Private Edition with other SAP and non-SAP systems. This content can be accessed through the following platforms:

Option A: Cloud Integration Automation service

This option is incorrect. The Cloud Integration Automation service provides guided workflows to automate integration setup but does not serve as a repository for pre-delivered integration content.

Option B: SAP Discovery Center

This option is correct. The SAP Discovery Center offers a collection of missions and services, including pre-packaged integration scenarios, to assist in implementing and integrating SAP solutions.

Option C: SAP Cloud ALM

This option is incorrect. SAP Cloud ALM is a tool for application lifecycle management, focusing on monitoring and operations, and does not provide pre-delivered integration content.

Option D: SAP Help Portal

This option is correct. The SAP Help Portal contains comprehensive documentation, including integration guides and pre-delivered content for various SAP solutions.

Option E: SAP Business Accelerator Hub

This option is correct. The SAP Business Accelerator Hub (formerly known as SAP API Business Hub) is a central repository where SAP provides pre-packaged integration content, APIs, and integration flows for different scenarios.

In summary, pre-delivered integration content for SAP S/4HANA Cloud Private Edition can be found in the SAP Discovery Center, SAP Help Portal, and SAP Business Accelerator Hub.

## NEW QUESTION # 13

When do you specify the data retention period in the SAP S/4HANA Migration Cockpit?

- A. When the project status is Not Started
- B. When the project status is In Progress
- C. When the project status is Finished
- D. When the project status is Completed

**Answer: C**

Explanation:

In the SAP S/4HANA Migration Cockpit, the data retention period specifies how long temporary migration data is retained in the system after the migration process is completed. You set this retention period when the project status is Finished. At this stage, all migration activities are complete, and you can define how long the system should keep the temporary data before it is automatically deleted.

Option A: When the project status is In Progress

This option is incorrect. While the project is in progress, migration activities are ongoing, and setting the data retention period at this stage is premature.

Option B: When the project status is Not Started

This option is incorrect. Before the project starts, it's too early to define the data retention period, as migration tasks have not yet commenced.

Option D: When the project status is Completed

This option is incorrect. The correct status for setting the data retention period is "Finished," not "Completed." In summary, you specify the data retention period in the SAP S/4HANA Migration Cockpit when the project status is Finished, ensuring that temporary migration data is retained for an appropriate duration after migration activities are concluded.

#### NEW QUESTION # 14

In which system do you carry out business process testing before any changes or extensions are transported to the production system?

- A. Quality system
- B. Trial system
- C. Development system
- D. Sandbox system

**Answer: A**

Explanation:

Business process testing in SAP S/4HANA Cloud Private Edition ensures that changes or extensions function correctly before deployment to the production system. The system landscape typically includes multiple systems, and testing occurs in a specific environment. Let's evaluate:

\* A. Sandbox system: This is incorrect. The sandbox system is used for early exploration (e.g., during Fit-to-Standard workshops in the Explore phase) to test standard processes or prototypes. It's not the primary system for formal business process testing before production deployment.

\* B. Development system: This is incorrect. The development system is where configuration, customizations, and extensions are initially built and unit-tested. However, it's not the environment for comprehensive business process testing, which requires a more stable setup.

\* C. Quality system: This is correct. In the SAP S/4HANA Cloud Private Edition system landscape under RISE with SAP, the quality system (QAS) is used for formal business process testing (e.g., string tests, integration tests) before transporting changes or extensions to production (PRD). It mirrors the production environment closely, ensuring thorough validation.

\* D. Trial system: This is incorrect. A trial system is not a standard part of the SAP landscape for Private Edition. It might refer to temporary demo systems, but it's not used for formal testing prior to production.

In summary, business process testing before changes or extensions are transported to production is carried out in the C (Quality system).
