Plat-Dev-301 Valid Test Tutorial | Plat-Dev-301 Dumps Free

In order to gain the certification quickly, people have bought a lot of study materials, but they also find that these materials don't suitable for them and also cannot help them. If you also don't find the suitable Plat-Dev-301 test guide, we are willing to recommend that you should use our study materials. Because our products will help you solve the problem, it will never let you down if you decide to purchase and practice our Plat-Dev-301 latest question.

Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q11-Q16):

NEW QUESTION # 11

A company has reference data stored in multiple custom metadata records that represent default information and delete behavior for certain geographic regions.

When a contact is inserted, the default information should be set on the contact from the custom metadata records based on the contact's address information.

Additionally, if a user attempts to delete a contact that belongs to a flagged region, the user must get an error message.

Depending on company personnel resources, what are two ways to automate this?

Choose 2 answers

- A. Apex invocable method
- B. Flow Builder

- C. Apex trigger
- D. Remote action

Answer: B,C

Explanation:

To automate the process based on the contact's address information and prevent deletion from flagged regions:

Flow Builder: Can be used to set default information on records when they are created.

Apex Trigger: Allows for complex logic to be executed before or after data manipulation operations, including insert and delete. It can be used to enforce rules such as preventing deletion.

Flow Builder: Salesforce Help Article

Apex Triggers: Apex Developer Guide

NEW QUESTION # 12

Consider the Apex class below that defines a RemoteAction used on 2 Visualforce search page.

```
global with sharing class MyRemoter {
    public String accountName { get; set; }
    public static Account account { get; set; }
    public MyRemoter() {}

    @RemoteAction
    global static Account getAccount(String accountName) {
        account = [SELECT Id, Name, NumberOfEmployees
                  FROM Account WHERE Name = :accountName];
        return account;
    }
}
```

Which code snippet will assert that the remote action returned the correct Account? A)

```
Account a = controller.getAccount('TestAccount');
System.assertEquals('TestAccount', a.Name);
```

B)

```
MyRemoter remote = new MyRemoter('TestAccount');
Account a = remote.getAccount();
System.assertEquals('TestAccount', a.Name);
```

C)

```
Account a = MyRemoter.getAccount('TestAccount');
System.assertEquals('TestAccount', a.Name);
```

D)

```
MyRemoter remote = new MyRemoter();
Account a = remote.getAccount('TestAccount');
System.assertEquals('TestAccount', a.Name);
```

- A. Option C
- B. Option B
- C. Option D
- D. Option A

Answer: A

Explanation:

The correct code snippet to assert that the remote action returned the correct Account is option C. This is because the `getAccount` method is a global static method within the `MyRemoter` class and can be directly called without needing to instantiate an object of the class.

NEW QUESTION # 13

When developing a Lightning web component, which setting displays `lightninglayout-items` in one column on small devices, such as mobile phones, and in two columns on tablet-size and desktop-size screens?

- A. Set `size="12"` `tablet-device-size="6"`
- B. Set `size="6"` `small-device-size="12"`
- C. Set `size="6"` `mobile-device-size="12"`
- D. Set `size="12"` `medium-device-size="6"`

Answer: D

Explanation:

To display `lightning-layout-items` in one column on small devices and in two columns on larger devices, you should set the `size` attribute to "12" for small devices and the `medium-device-size` attribute to "6". This ensures that on small devices each item takes the full width, and on medium or larger devices, items take up half the width.

NEW QUESTION # 14

In an organization that has multi-currency enabled, a developer is tasked with building a Lightning component that displays the top ten Opportunities most recently accessed by the logged in user. The developer must ensure the Amount and LastModifiedDate field values are displayed according to the user's locale.

What is the most effective approach to ensure values displayed respect the user's locale settings?

- A. Use a wrapper class to format the values retrieved via SOQL.
- B. Use the `FORMAT()` function in the SOQL query.
- C. Use the `FOR VIEW` clause in the SOQL query.
- D. Use REGEX expressions to format the values retrieved via SOQL.

Answer: B

Explanation:

In a multi-currency Salesforce organization, displaying currency amounts according to the user's locale is crucial for ensuring data clarity and relevance. To achieve this, developers can leverage Salesforce's built-in capabilities to format field values directly within SOQL queries. The `FORMAT()` function is particularly useful as it formats currency fields according to the organization's locale settings. By using this function in a SOQL query, developers can ensure that the Amount and LastModifiedDate fields are displayed correctly. This method is more effective and efficient than post-processing the values in Apex, which would be required if using wrapper classes or REGEX expressions. Additionally, using the `FOR VIEW` clause in a SOQL query will mark records as recently

viewed, which does not format the fields as per the user's locale.

SOQL FORMAT Function

Working with Multi-Currency

NEW QUESTION # 15

A company notices that their unit tests in a test class with many methods to create many records for prerequisite reference data are slow.

What can a developer to do address the issue?

- A. Move the prerequisite reference data setup to the constructor for the test class.
- B. Move the prerequisite reference data setup to a TestDataFactory and call that from each test method.
- C. Turn off triggers, flows, and validations when running tests.
- D. Move the prerequisite reference data setup to a `@testSetup` method in the test class.

Answer: D

Explanation:

`@testSetup` method improves test performance. It allows data sharing across test methods within a class, reducing redundant data creation.

NEW QUESTION # 16

.....

The operating system of Plat-Dev-301 exam practice has won the appreciation of many users around the world. Within five to ten minutes after your payment is successful, our operating system will send a link to Plat-Dev-301 Training Materials to your email address. After our Plat-Dev-301 study guide update, our operating system will also send you a timely message to ensure that you will not miss a single message.
