## SAP Certified Associate - Integration Developer Sample Questions (Q47-Q52):

### NEW QUESTION # 47

Why does the API Management capability of the SAP Integration Suite require API providers?

- A. To create authenticated API instances
- B. To create APIs
- C. To incorporate APIs from source systems

**Answer: C**

Explanation:

In API Management (Integration Suite):

API Providers represent backend systems (e.g., SAP S/4HANA, SuccessFactors, third-party APIs). They are required to connect and incorporate APIs from those systems into API Management. Once defined, API Proxies are created from API Providers to expose APIs securely. Other options: Authentication is handled via policies, not API Providers. APIs are created as API Proxies, not directly by Providers. Thus, the purpose of API Providers is to incorporate APIs from source systems.

#### NEW QUESTION # 48

What kind of editor can you use to manipulate integration flows?

- A. Command-line editor
- **B. Graphical editor**
- C. Code editor

**Answer: B**

Explanation:

In SAP Cloud Integration, integration flows are manipulated using a web-based graphical editor:

Allows drag-and-drop of adapters, mappings, scripts, and process steps.

Provides visual orchestration of message flows.

Command-line and raw code editors are not supported for iFlow design (though XML behind the iFlow exists, it is not directly edited by developers).

Thus, the editor is the Graphical editor.

#### NEW QUESTION # 49

During development, in which integration flow component can you configure a simulated payload?

- A. General Splitter
- B. Data Store Operations
- C. SOAP Adapter
- **D. Content Modifier**

**Answer: D**

Explanation:

In SAP Cloud Integration, during development and testing:

The Content Modifier can be used to insert or simulate payloads, headers, or properties.

This allows developers to test flows without requiring external calls.

Other options:

SOAP Adapter # Used for SOAP communication, not payload simulation.

General Splitter # Splits incoming payloads, doesn't simulate.

Data Store Operations # Manages stored messages, not simulation.

Thus, the correct component for simulated payloads is Content Modifier.

#### NEW QUESTION # 50

Which SAP offering provides a highly scalable, distributed event streaming platform that supports MQTT, AMQP, and JMS protocols for efficient and secure event transmission in hybrid IT landscapes?

- A. SAP Cloud Platform, Integration
- B. SAP Process Orchestration
- **C. SAP Integration Suite, Advanced Event Mesh**
- D. SAP Business Technology Platform (SAP BTP)

**Answer: C**

Explanation:

SAP Integration Suite, Advanced Event Mesh (AEM) is the SAP offering that provides a highly scalable, distributed event streaming

platform. It is specifically designed for large-scale, hybrid, and multi-cloud landscapes where event-driven communication is required across diverse applications and systems.

Key points from SAP documentation:

- \* Protocol Support: Advanced Event Mesh supports MQTT, AMQP, JMS, REST, and WebSocket protocols, ensuring secure and efficient event transmission across heterogeneous IT landscapes.
- \* Scalability and Distribution: Unlike standard SAP Event Mesh, which is intended for simpler messaging scenarios, AEM provides global-scale event streaming with distributed brokers that can span multiple geographies and cloud regions.
- \* Hybrid Integration: AEM enables real-time, event-driven integration across on-premise systems, SAP cloud applications, and third-party solutions, making it suitable for hybrid IT environments.
- \* Enterprise Features: It includes advanced capabilities such as high availability, disaster recovery, dynamic scaling, and fine-grained security for enterprise-grade messaging.

Why the other options are incorrect:

- \* A. SAP Business Technology Platform (SAP BTP) # This is the overall platform-as-a-service offering from SAP. It provides the foundation but not specifically the event streaming capability.
- \* B. SAP Cloud Platform, Integration # This was the older name for what is now SAP Integration Suite (Cloud Integration capability). It does not directly provide advanced distributed event streaming.
- \* C. SAP Process Orchestration # This is the on-premise middleware suite (PI/PO + BPM), but it is not designed for distributed event streaming or modern event protocols like MQTT.

Therefore, the correct answer is D. SAP Integration Suite, Advanced Event Mesh, as it is the only SAP solution purpose-built to deliver distributed, scalable event streaming with support for MQTT, AMQP, and JMS protocols.

### NEW QUESTION # 51

What are some advantages of creating an OData interface through an API provider? Note: There are 2 correct answers to this question.

- A. Automatic creation of a Swagger UI
- B. Automatic creation of an openAPI specification
- C. Automatic creation of a WSDL specification
- D. Automatic creation of a RAML specification

**Answer: A,B**

Explanation:

Some advantages of creating an OData interface through an API provider are automatic creation of a Swagger UI and an openAPI specification. A Swagger UI is a web-based tool that allows you to interact with the OData service and test its functionality. An openAPI specification is a standard format for describing the OData service and its metadata, which can be used by other tools and applications.
