Microsoft AZ-700 Certification Exam is designed to test the skills and knowledge required to design and implement networking solutions in Microsoft Azure. AZ-700 exam is intended for individuals who work as network architects, network engineers, or cloud solutions architects, and who are responsible for designing and implementing networking solutions in Azure.

Microsoft Designing and Implementing Microsoft Azure Networking Solutions Sample Questions (Q220-Q225):

NEW QUESTION # 220
You have an Azure Front Door instance named FD1 that is protected by using Azure Web Application Firewall (WAF).
FD1 uses a frontend host named app1.contoso.com to provide access to Azure web apps hosted in the East US Azure region and the West US Azure region.
You need to configure FD1 to block requests to app1.contoso.com from all countries other than the United States.
What should you include in the WAF policy?

- A. a custom rule that uses a match rule
- B. a custom rule that uses a rate limit rule

- C. a frontend host association
- D. a managed rule set

Answer: A

Explanation:
Custom rules allow you to create tailored rules to suit the exact needs of your applications and security policies. Now, you can restrict access to your web applications by country/region. As with all custom rules, this logic can be compounded with other rules to suit the needs of your application.
To create a geo-filtering custom rule in the Azure portal, simply select Geo location as the Match Type, and then select the country/region or countries/regions you want to allow/block from your application.

NEW QUESTION # 221

In NSG1, you create inbound rules as shown in the following table.

Source	Priority	Port	Action
*	101	80	Allow
*	150	443	Allow
Virtual network	200	*	Deny

You have the Azure virtual machines shown in the following table.

Name	Subnet
VM1	Subnet1
VM2	Subnet1
VM3	Subnet2

NSG2 has only the default rules configured.
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
