New NCA-6.10 Test Topics - NCA-6.10 Exam Question

You will face plenty of options in your whole lives. Sometimes, you must decisively abandon some trivial things, and then you can harvest happiness and fortunes. Now, our NCA-6.10 guide materials just need to cost you less spare time, then you will acquire useful skills which may help you solve a lot of the difficulties in your job. Besides, our NCA-6.10 Exam Questions will help you pass the exam and get the certification for sure.

Nutanix Certified Associate v6.10 Sample Questions (Q52-Q57):

NEW QUESTION # 52

An administrator wants to change from Redundancy Factor 2 to 3, but it is not allowed.
What must the administrator check?

- A. Check AOS version and upgrade, if needed.
- B. Check hardware availability of the nodes.

- C. Check that the cluster has been properly licensed.
- **D. Check that the cluster has five or more nodes.**

Answer: D

Explanation:

Redundancy Factor 3 (RF3) requires a minimum of five nodes in the cluster to ensure that data can be distributed across enough nodes to tolerate the failure of two nodes. If the cluster has fewer than five nodes, RF3 cannot be enabled.

- * A. Check that the cluster has been properly licensed: Licensing is not directly related to enabling RF3.
- * B. Check that the cluster has five or more nodes: Correct, as RF3 requires at least five nodes.
- * C. Check hardware availability of the nodes: While hardware health is important, it does not determine RF3 eligibility.
- * D. Check AOS version and upgrade, if needed: RF3 requirements are not specific to an AOS version.

NEW QUESTION # 53

Which is the default native Linux bridge in AHV?

- A. virbr0
- **B. br0**
- C. vs0
- D. bridge0

Answer: B

Explanation:

The correct answer is A. br0.

In AHV (Acropolis Hypervisor), br0 is the default native Linux bridge created on each hypervisor host. It is used for VM traffic and external communication. AHV leverages Open vSwitch (OVS) to manage virtual networking, but the bridge is exposed as br0 in the host's network configuration.

Key points:

- * br0 connects VM virtual NICs (vNICs) to the physical network via the host's uplinks.
- * It is pre-configured during Foundation or cluster deployment.
- * virbr0 is typical in KVM environments but is not used in AHV.

Official Reference:

* Nutanix AHV Networking Guide

* Nutanix KB #2027 - AHV Host Networking

* Excerpt: "AHV uses br0 as the default bridge on the host, configured by Open vSwitch for guest VM networking."

NEW QUESTION # 54

What is the default admin session log out time?

- A. 5 minutes
- B. 20 minutes
- C. 10 minutes
- **D. 15 minutes**

Answer: D

Explanation:

The default admin session logout time in Nutanix is 15 minutes. If no activity is detected within this time, the session is automatically logged out for security reasons. This timeout can be adjusted in the system settings if needed, depending on organizational requirements.

NEW QUESTION # 55

An administrator needs to create a VM Template from an existing VM.
What is required for this action to be successful?

- A. Windows OS is installed.
- B. The VM is powered on.
- C. Sysprep or Cloud-init script.
- **D. The VM is powered off.**

Answer: D

NEW QUESTION # 56

What role does a Replication Factor of 2 or 3 play in ensuring data integrity and recovery?

- A. It limits the scope of hardware failures during recovery operations.
- B. It reduces the need for offsite backup solutions.
- **C. It ensures that multiple copies of data are available for recovery.**
- D. It accelerates data transfer to remote backup sites.

Answer: C

Explanation:

Replication Factor (RF) defines the number of copies of data stored in a Nutanix cluster. RF2 ensures two copies of data, and RF3 ensures three copies. This redundancy allows the system to maintain data integrity and recoverability even in the event of hardware failures.

* A. It limits the scope of hardware failures during recovery operations: Incorrect, as RF focuses on data replication, not limiting failure scopes.

* B. It ensures that multiple copies of data are available for recovery: Correct, as RF directly relates to data redundancy and recovery capabilities.

* C. It accelerates data transfer to remote backup sites: Incorrect, as RF does not affect remote backup speed.

* D. It reduces the need for offsite backup solutions: Incorrect, as RF works within the cluster, not as a replacement for offsite backups.
