## Network Appliance NetApp Storage Installation Engineer, ONTAP Professional Exam Sample Questions (Q122-Q127):

### NEW QUESTION # 122

Which tool checks a newly installed environment for configuration errors?

- A. FilerView
- B. Synergy
- C. BNA
- **D. Config Advisor**

**Answer: D**

Explanation:

After installing a NetApp storage system, it is critical to validate the environment for configuration and cabling errors. Config Advisor is the NetApp-recommended tool specifically designed for this purpose.

Config Advisor performs automated checks against NetApp-supported configuration rules, including hardware cabling, HA setup, disk ownership, shelf connectivity, network configuration, and firmware compatibility. It identifies misconfigurations that could lead to

operational issues if left unresolved.

FilerView and BNA are legacy or unrelated tools, and Synergy is not used for ONTAP installation validation. Therefore, the correct answer is D (Config Advisor).

### NEW QUESTION # 123

What is the purpose of a mailbox disk?

- A. Sending AutoSupport mail
- B. Shipping defective drives
- C. Storing HA partner information
- D. Logging

**Answer: C**

Explanation:

Mailbox disks store HA metadata and partner state information required for takeover and giveback operations.

### NEW QUESTION # 124

After installation, the customer requests training on system administration.

Which two responses are appropriate? (Choose two.)

- A. Use NetApp SmartSolve for all questions.
- B. Open a support case for training questions.
- C. Visit the NetApp MySupport site and use Express Guides.
- D. Use the Knowledge Base for specific issues.

**Answer: C,D**

### NEW QUESTION # 125

What is the minimum number of disks required in a SAS shelf?

- A. one
- B. there is no minimum
- C. two
- D. half of the shelf's capacity

**Answer: A**

Explanation:

From a hardware installation perspective, NetApp SAS shelves are designed to function with a minimum of one installed disk. While performance, redundancy, and aggregate creation require additional disks, the physical shelf itself does not mandate a minimum disk count beyond one for detection and operation.

This flexibility allows administrators to stage hardware installations or expand capacity incrementally.

However, ONTAP best practices strongly recommend populating shelves in ways that support RAID protection and performance requirements.

Therefore, the minimum number of disks required in a SAS shelf is one, making option B correct.

### NEW QUESTION # 126

You have completed a base installation and system registration of an AFF A250 system, but you notice that you have one failed drive. Neither un-failing nor reseating the drive repaired it.

In this scenario, which two actions should you take? (Choose two.)

- A. Run Active IQ Config Advisor to collect all the logs on the system.
- B. Ask the customer to open a technical case with NetApp Support.
- C. Power off the system until the drive has been replaced.
- D. Ask the customer for a drive with the same capacity and replace it.

**Answer: A,B**
