There are plenty of platforms that have been offering CompTIA Project+ Certification Exam PK0-005 exam practice questions. You have to be vigilant and choose the reliable and trusted platform for CompTIA Project+ Certification Exam PK0-005 exam preparation and the best platform is Prep4sures. On this platform, you will get the valid, updated, and CompTIA Project+ Certification Exam exam expert-verified exam questions. CompTIA Project+ Certification Exam Questions are real and error-free questions that will surely repeat in the upcoming CompTIA Project+ Certification Exam exam and you can easily pass the final CompTIA Project+ Certification Exam PK0-005 Exam even with good scores.

## CompTIA Project+ Certification Exam Sample Questions (Q64-Q69):

### NEW QUESTION # 64

Which of the following can be used to determine whether a sample product is within an acceptable range?

- A. Velocity chart
- B. Fishbone diagram
- C. Scatter diagram
- **D. Control chart**

**Answer: D**

Explanation:

A control chart is a graphical tool that displays the variation of a process over time and compares it to predetermined control limits. It can be used to determine whether a sample product is within an acceptable range by checking if the sample values fall within the upper and lower control limits, which indicate the expected variation of the process. If the sample values are outside the control limits or show a non-random pattern, it indicates that the process is out of control and there may be some assignable causes of variation that need to be investigated and corrected. Reference = CompTIA Project+ Study Guide: Exam PK0-005, 3rd Edition, Chapter 8: Quality Management1; CompTIA Project+ Certification Study Guide, 3rd Edition, Chapter 8: Quality Management2

### NEW QUESTION # 65

A company that is implementing an updated version of its main product hired a new project manager to lead the project. Prior to the start of the project, the sponsor asked the project manager to prepare a report on the defects found in the previous project to avoid a decrease in production. The report shows that the two main defects are related to cosmetic and physical damage to the product. Which of the following charts would BEST prioritize which defects to address?

- A. Control
- B. Run
- C. Histogram
- **D. Pareto**

**Answer: D**

Explanation:

The project manager should use a Pareto chart to prioritize which defects to address for the product. A Pareto chart is a type of bar chart that shows the frequency or impact of different causes of problems or defects. It also shows a cumulative line that represents the percentage of the total frequency or impact. A Pareto chart can help to prioritize the causes that have the most significant effect on the quality of the product and apply the 80/20 rule, which states that 80% of the problems are caused by 20% of the causes.

### NEW QUESTION # 66

Which of the following can a project manager infer from the following velocity chart?

- A. The project is on schedule.
- **B. The project is behind schedule.**
- C. The project is at risk.
- D. The project is ahead of schedule.

**Answer: B**

Explanation:

The velocity chart typically shows the amount of work completed over time. If the "Actual Effort" line is below the "Planned Timeline," it indicates that the project is not progressing as fast as planned, hence it is behind schedule. This is inferred by comparing the actual work completed against what was scheduled.

References = The answer is based on standard project management practices and the typical interpretation of velocity charts in project management. For detailed information, please refer to the CompTIA Project+ Study Guide and other official CompTIA resources.

### NEW QUESTION # 67

While working with a contractor, the project manager identified a communication conflict. The contractor did not agree that there was an issue. Which of the following should the project manager and contractor review?

- A. Scope of work
- B. Request for proposal
- C. Vendor rules of engagement
- D. Project schedule

**Answer: C**

Explanation:

The project manager and contractor should review the vendor rules of engagement, which are the guidelines and expectations for the communication and interaction between the project team and the contractor. The vendor rules of engagement can help to prevent or resolve communication conflicts by clarifying the roles and responsibilities, the frequency and mode of communication, the escalation process, the feedback mechanism, and the performance evaluation criteria of the contractor. The vendor rules of engagement are usually part of the contract or the procurement management plan.

The vendor rules of engagement are different from the scope of work, which is the document that describes the work to be performed, the deliverables to be provided, and the acceptance criteria to be met by the contractor. The vendor rules of engagement are also different from the request for proposal, which is the document that solicits proposals from potential contractors by specifying the project requirements, evaluation criteria, and contract terms. The vendor rules of engagement are also different from the project schedule, which is the tool that displays the planned start and finish dates, durations, dependencies, and resources of the project activities and tasks. References = CompTIA Project+ Study Guide: Exam PK0-005, 3rd Edition, Chapter 12: Procurement Management 1; CompTIA Project+ Certification Study Guide, 3rd Edition, Chapter 12: Procurement Management 2; Vendor Rules of Engagement 3

### NEW QUESTION # 68

A PM received feedback from the project sponsor that the resources involved in the project are unsure of their daily activities. Which of the following is the MOST effective step for the PM to take to ensure clarity within the team?

- A. Review the Gantt chart weekly with the team.
- B. Create a list of tasks and share it with the team.
- C. Resend the scope of work to the team.
- D. Have the project sponsor meet with the team.

**Answer: A**

Explanation:

Reviewing the Gantt chart weekly with the team would be the most effective step for the project manager to take to ensure clarity within the team after receiving feedback from the project sponsor that the resources involved in the project are unsure of their daily activities. A Gantt chart is a graphical tool that shows the schedule of a project, including the start and end dates, durations, dependencies, milestones, and progress of each task or activity. Reviewing the Gantt chart weekly with the team can help to clarify their roles and responsibilities, assign tasks and deadlines, track and report their status and performance, identify and resolve any issues or risks, and keep them aligned and engaged with the project goals.
