#### NEW QUESTION 387

An engineer is configuring IEEE 802.1ad on the access port on a new Cisco router. The access port handles traffic from multiple customer VLANs, and it is expected to mark all customer traffic to the same VLAN without dropping any traffic. Which configuration must the engineer apply?

- A. interface gigabitEthernet0/0/1 ethernet dot1ad uni s-port
- B. interface gigabitEthernet0/0/1 ethernet dot1ad uni c-port
- C. interface gigabitEthernet0/0/1 ethernet dot1ad uni nri
- D. interface gigabitEthernet0/0/1 encapsulation dot1q 10

Answer: A

#### NEW QUESTION 388

While an engineer deploys a new Cisco device to redistribute routes from OSPF to BGP, they notice that not all OSPF routes are getting advertised into BGP. Which action must the engineer perform so that the device allows O, OIA, OE1, and OE2 OSPF routes into other protocols?

- A. Configure the device to pass only O and E2 routes through it.
- B. Configure the synchronization keyword in the global BGP configuration.
- C. Configure the keyword nssa in the redistribution entry.
- D. Configure the keywords internal and external in the redistribution entry.

Answer: D

#### NEW QUESTION 389

A company is expanding its existing office space to a new floor of the building, and the networking team is installing a new set of switches. The new switches are running IGMPv2, and the engineers configured them for VLAN10 only. The rest of the existing network includes numerous Layer 2 switches in multiple other VLANs, all running IGMPv3. Which additional task must the team perform when deploying the new switches so that traffic is switched correctly through the entire network?

- A. Configure the new switches to use IGMPv3 on all VLANs on the network.
- B. Configure all switches on the network to support IGMPv2 and IGMPv3 on all VLANs on the network.
- C. Configure the new switches to use IGMPv3 on VLAN10 only.

**New New 350-501 Dumps Ebook | Professional Cisco 100% 350-501 Correct Answers: Implementing and Operating Cisco Service Provider Network Core Technologies**

It is a popular belief that only professional experts can be the leading one to do some adept job. And similarly, only high quality and high accuracy 350-501 exam questions like ours can give you confidence and reliable backup to get the certificate smoothly because our experts have extracted the most frequent-tested points for your reference. Our 350-501 exam questions generally raised the standard of practice materials in the market with the spreading of higher standard of knowledge in this area. So your personal effort is brilliant but insufficient to pass the Implementing and Operating Cisco Service Provider Network Core Technologies exam and our 350-501 Test Guide can facilitate the process smoothly & successfully. Our Implementing and Operating Cisco Service Provider Network Core Technologies practice materials are successful by ensuring that what we delivered is valuable and in line with the syllabus of this exam.

## Cisco Implementing and Operating Cisco Service Provider Network Core Technologies Sample Questions (Q268-Q273):

### NEW QUESTION # 268

Drag and drop the multicast concepts from the left onto the correct descriptions on the right.

**Answer:**

Explanation:

### NEW QUESTION # 269

Why do Cisco MPLS TE tunnels require a link-state routing protocol?

- A. The tunnel endpoints can use the link-state database to evaluate the entire topology and determine the best path
- **B. Link-state routing protocols use SPF calculations that the tunnel endpoints leverage to implement the tunnel**
- C. The link state database provides segmentation by area, which improves the path-selection process
- D. The link-state database provides a data repository from which the tunnel endpoints can dynamically select a source ID

**Answer: B**

Explanation:

Cisco MPLS Traffic Engineering (TE) tunnels necessitate a link-state routing protocol like OSPF or IS-IS because these protocols use Shortest Path First (SPF) calculations. The tunnel endpoints leverage these SPF calculations to implement the tunnel, ensuring an efficient and optimized path through the network. This is essential for MPLS TE, which aims to optimize network resource utilization and improve traffic distribution across the network.

Cisco Community, Cisco Documentation

### NEW QUESTION # 270

Refer to the exhibit:

- A. The router uses NSF to load balance traffic between two links, with the primary link alternating every 90 seconds
- **B. The router uses NSF to handle RP switchover while allowing neighbor relationships to remain up**
- C. The router uses NSF to reduce neighbor-relationship downtime during RP switchover
- D. The router uses NSF to load balance traffic on a routed EtherChannel

**Answer: B**

### NEW QUESTION # 271

Refer to the exhibit.

An engineer has started to configure a router for OSPF, as shown. Which configuration must an engineer apply on the network so that area 15 traffic from R5 to R1 will prefer the route through R4?

- A. Implement a multiarea adjacency on the link between R2 and R4, with the cost manipulated to make the path through R4 preferred.
- **B. Increase the cost on the link between R2 and R4, to influence the path over R3 and R4.**
- C. Implement a sham link on the between R3 and R2 to extend area 0 area 15.
- D. Place the link between R3 and R5 in a stub area to force traffic to use the route through R4.

**Answer: B**

### NEW QUESTION # 272

Refer to the exhibit:

Which command is used to complete this configuration for QoS class-based marking?

- A. PE-A(config-pmap-c)#random-detect
- B. PE-A(config-pmap-c)#fair-queue
- **C. PE-A(config-pmap-c)#set dscp ef**
- D. PE-A(config-pmap-c)#priority

**Answer: C**

### NEW QUESTION # 273
