Fortinet FCSS - Enterprise Firewall 7.6 Administrator Sample Questions (Q16-Q21):

NEW QUESTION # 16
Refer to the exhibit.

Per-Platform Mapping

Name: LAN

Description:

Color:

Wildcard:

Per-Platform Mapping

<input type="checkbox"/>	Name	Device Interface Name	Shaping Profile
<input type="checkbox"/>	FortiGate-400E	resources	
<input type="checkbox"/>	FortiGate-40F	Human_resources	
<input type="checkbox"/>	FortiGate-81E	Wireless	
<input type="checkbox"/>	FortiGate-VM64	private	
<input type="checkbox"/>	FortiGate-VM64-KVM	ZoneA	

Per-Platform Mapping

<input type="checkbox"/>	Name	Device Interface Name	Shaping Profile
<input type="checkbox"/>	FortiGate-400E	resources	
<input type="checkbox"/>	FortiGate-40F	Human_resources	
<input type="checkbox"/>	FortiGate-81E	Wireless	
<input type="checkbox"/>	FortiGate-VM64	private	
<input type="checkbox"/>	FortiGate-VM64-KVM	ZoneA	

Per-Device Mapping

<input type="checkbox"/>	Mapped Device	Details	Type	Addressing Mode	IP/Netmask
<input type="checkbox"/>	NGFW-1 [Core2]	port2	Physical	Manual	100.64.2.1/255.255.255.0

A normalized interface LAN on FortiManager is shown.

Which two statements about this interface configuration are correct? (Choose two.)

- A. The normalized interface LAN will be mapped to the Human Resources interface for any FortiGate-40F model devices.
- B. The normalized interface LAN will be mapped to the wireless interface for FortiGate-81E model devices.
- C. The normalized interface LAN will be mapped to the port2 interface for NGFW-1 [Core2].
- D. The normalized interface LAN will be mapped to the private interface for FortiGate-VM64 model devices.

Answer: B,C

Explanation:

The normalized interface named LAN is mapped per platform so that, for any FortiGate-81E device, it corresponds to the interface named Wireless. In addition, a specific per-device mapping is defined so that, on device NGFW-1 [Core2], the normalized LAN interface maps to the physical interface port2.

NEW QUESTION # 17

Refer to the exhibit, which contains the partial output of an OSPF command.

```
FortiGate # get router info ospf status
Routing Process "ospf 0" with ID 0.0.0.5
Process uptime is 0 minute
Process bound to VRF default
Conforms to RFC2328, and RFC1583Compatibility flag is enabled
Supports only single TOS(TOS0) routes
Supports opaque LSA
Do not support Restarting
This router is an ABR
```

An administrator is checking the OSPF status of a FortiGate device and receives the output shown in the exhibit. What two conclusions can the administrator draw? (Choose two.)

- A. The FortiGate device is a backup designated router
- B. The FortiGate device has OSPF ECMP enabled
- C. The FortiGate device is connected to multiple areas
- D. The FortiGate device injects external routing information

Answer: C,D

Explanation:

The output of the `get router info ospf status` command provides key information about the OSPF (Open Shortest Path First) configuration on the FortiGate device.

The FortiGate device is connected to multiple areas

* The output states: "This router is an ABR"

* ABR (Area Border Router) means the device is connected to multiple OSPF areas and maintains routing information between them.

* This confirms that the FortiGate is not just in one area, but at least one backbone area (Area 0) and another OSPF area.

The FortiGate device injects external routing information

* The output states: "Supports opaque LSA"

* Opaque LSAs (Type 9, 10, and 11) are used in OSPF extensions, including those that support external route injection.

* Typically, ABRs or ASBRs (Autonomous System Boundary Routers) inject external routes, allowing routes from other routing protocols (such as BGP or static routes) to be advertised into OSPF.

NEW QUESTION # 18

A company's guest internet policy, operating in proxy mode, blocks access to Artificial Intelligence Technology sites using FortiGuard. However, a guest user accessed a page in this category using port 8443.

Which configuration changes are required for FortiGate to analyze HTTPS traffic on nonstandard ports like 8443 when full SSL inspection is active in the guest policy?

- A. Add a URL wildcard domain to the website CA certificate and use it in the SSL/SSH Inspection Profile.
- B. To analyze nonstandard ports in web filter profiles, use TLSv1.3 in the SSL/SSH Inspection Profile.
- C. In the Protocol Port Mapping section of the SSL/SSH Inspection Profile, enter 443, 8443 to analyze both standard (443) and non-standard (8443) HTTPS ports.
- D. Administrators can block traffic on nonstandard ports by enabling the SNI check in the SSL/SSH Inspection Profile.

Answer: C

Explanation:

When FortiGate is operating in proxy mode with full SSL inspection enabled, it inspects encrypted HTTPS traffic by default on port 443. However, some websites may use non-standard HTTPS ports (such as 8443), which FortiGate does not inspect unless explicitly configured.

To ensure that FortiGate inspects HTTPS traffic on port 8443, administrators must manually add port 8443 in the Protocol Port Mapping section of the SSL/SSH Inspection Profile. This allows FortiGate to treat HTTPS traffic on port 8443 the same as traffic

on port 443, enabling proper inspection and enforcement of FortiGuard category-based web filtering.

NEW QUESTION # 19

An administrator is setting up an ADVPN configuration and wants to ensure that peer IDs are not exposed during VPN establishment.

Which protocol can the administrator use to enhance security?

- A. Use IKEv2, which encrypts peer IDs and prevents exposure.
- B. Opt for SSL VPN web mode because it does not use peer IDs at all.
- C. Stick with IKEv1 main mode because it offers better performance.
- D. Choose IKEv1 aggressive mode because it simplifies peer identification.

Answer: A

Explanation:

In ADVPN (Auto-Discovery VPN) configurations, security concerns include protecting peer IDs during VPN establishment. Peer IDs are exchanged in the IKE (Internet Key Exchange) negotiation phase, and their exposure could lead to privacy risks or targeted attacks.

IKEv2 encrypts peer IDs, making it more secure compared to IKEv1, where peer IDs can be exposed in plaintext in aggressive mode.

IKEv2 also provides better performance and flexibility while supporting dynamic tunnel establishment in ADVPN.

NEW QUESTION # 20

How can you ensure the corporate FortiGate learns the 192.168.1.0/24 network?

- A. Enable RIP
- B. Implement OSPF over IPsec
- C. Add static route
- D. Add network locally

Answer: B
