Salesforce Certified MuleSoft Integration Architect I Sample Questions (Q213-Q218):

NEW QUESTION # 213
A global organization operates datacenters in many countries. There are private network links between these datacenters because all business data (but NOT metadata) must be exchanged over these private network connections.
The organization does not currently use AWS in any way.
The strategic decision has Just been made to rigorously minimize IT operations effort and investment going forward.
What combination of deployment options of the Anypoint Platform control plane and runtime plane(s) best serves this organization at the start of this strategic journey?

- A. Anypoint Platform - Private Cloud Edition Customer-hosted runtime plane in each datacenter
- B. MuleSoft-hosted Anypoint Platform control plane CloudHub Shared Worker Cloud in multiple AWS regions
- C. MuleSoft-hosted Anypoint Platform control plane Customer-hosted runtime plane in each datacenter
- D. MuleSoft-hosted Anypoint Platform control plane Customer-hosted runtime plane in multiple AWS regions

Answer: C

Explanation:
Correct answer is MuleSoft-hosted Anypoint Platform control plane Customer-hosted runtime plane in each datacenter There are two things to note about the question which can help us figure out correct answer.. * Business data must be exchanged over these private network connections which means we can not use MuleSoft provided Cloudhub option. So we are left with either customer hosted runtime in external cloud provider or customer hosted runtime in their own premises. As customer does not use AWS at the moment. Hence that don't have the immediate option of using Customer-hosted runtime plane in multiple AWS regions. hence the most suitable option for runtime plane is Customer-hosted runtime plane in each datacenter * Metadata has no limitation to reside in organization premises. Hence for control plane MuleSoft hosted Anypoint platform can be used as a strategic solution.
Hybrid is the best choice to start. Mule hosted Control plane and Customer hosted Runtime to start with.
Once they mature in cloud migration, everything can be in Mule hosted.

NEW QUESTION # 214
Which Salesforce API is invoked to deploy, retrieve, create or delete customization information such as custom object definitions using a Mule Salesforce connector in a Mule application?

- A. SOAP API
- B. Bulk API
- C. Metadata API
- D. REST API

Answer: C

Explanation:
* urpose of Metadata API:
* The Metadata API is specifically designed to manage customization and configuration data in Salesforce. It allows users to deploy, retrieve, create, update, or delete customization information such as custom object definitions, page layouts, and more.
* Use in MuleSoft:
* When using the Mule Salesforce connector in a Mule application, invoking the Metadata API enables you to programmatically manage and deploy Salesforce metadata. This is essential for tasks such as deploying new custom objects, updating existing configurations, or deleting obsolete customizations.
* Why Not Other APIs:
* REST API: Primarily used for accessing Salesforce data and interacting with standard and custom objects.
* SOAP API: Similar to REST API but uses SOAP protocol; also mainly for data access and manipulation.
* Bulk API: Designed for handling large volumes of data for insert, update, delete operations but not for metadata management.

NEW QUESTION # 215
In preparation for a digital transformation initiative, an organization is reviewing related IT integration projects that failed for various for reason.
According to MuleSoft's surveys of global IT leaders, what is a common cause of IT project failure that this organization may likely discover in its assessment?

- A. Lack of alignment around business outcomes
- B. Reliance on an Integration-Platform-as-a-Service (iPaaS)
- C. Following an Agile delivery methodology
- D. Spending too much time on enablement

Answer: A

Explanation:
According to MuleSoft's surveys of global IT leaders, a common cause of IT project failure is a lack of alignment around business outcomes. When IT projects do not have clear business objectives or fail to align with the strategic goals of the organization, they are more likely to face challenges and fail to deliver value.
Ensuring that IT initiatives are closely tied to business goals and have stakeholder buy-in is crucial for their success.

- D. Use streaming with a file storage repeatable strategy for reading records from the database and batch aggregator with streaming to write to FTPS

Answer: D

NEW QUESTION # 217
A Mule application is running on a customer-hosted Mule runtime in an organization's network. The Mule application acts as a producer of asynchronous Mule events. Each Mule event must be broadcast to all interested external consumers outside the Mule application. The Mule events should be published in a way that is guaranteed in normal situations and also minimizes duplicate delivery in less frequent failure scenarios.
The organizational firewall is configured to only allow outbound traffic on ports 80 and 443. Some external event consumers are within the organizational network, while others are located outside the firewall.
What Anypoint Platform service is most idiomatic (used for its intended purpose) for publishing these Mule events to all external consumers while addressing the desired reliability goals?

- A. Anypoint MQ
- B. Anypoint Exchange
- C. CloudHub VM queues
- D. CloudHub Shared Load Balancer

Answer: A

Explanation:
Set the Anypoint MQ connector operation to publish or consume messages, or to accept (ACK) or not accept (NACK) a message.
