No more exam phobia exits if you have devotedly prepared through our InsuranceSuite-Analyst Exam products, certain boost comes in your confidence level that routes you towards success pathway.

Guidewire Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam Sample Questions (Q50-Q55):

NEW QUESTION # 50

A project team for a new inland marine policy system needs to integrate their Guidewire application with a third-party document production vendor. They are evaluating the benefits of using a pre-built integration accelerator available on Guidewire Marketplace. Beyond simply enabling the connection, which key advantages do these pre-built integration solutions offer to significantly reduce implementation effort and total cost of ownership?

Choose 2 options.

- A. They necessitate manual data mapping documentation for every new Cloud release.
- B. They require extensive custom coding for specific vendor APIs.
- C. The extension pack eliminates the need for in-house integration expertise.
- **D. Promote faster implementation due to being pre-configured to meet a specific need.**
- **E. Partial solutions that provide a starting point for meeting the particular needs of the project.**

Answer: D,E

Explanation:

The correct answers are D and E because Guidewire Marketplace integration accelerators are intended to reduce implementation effort by providing reusable, standardized starting points rather than forcing a team to design and build every integration component from scratch.

D). Partial solutions that provide a starting point for meeting the particular needs of the project is correct because accelerators are not usually complete, turnkey replacements for all project-specific work.

Instead, they offer a proven base structure, common patterns, and reusable assets that can be adapted to the insurer's needs. This lowers analysis, design, and development effort while still allowing for project-specific tailoring.

E). Promote faster implementation due to being pre-configured to meet a specific need is also correct because one of the key benefits of these solutions is speed. Since they are already aligned to a known use case, such as a common vendor integration or a standard business capability, the project team can move more quickly through design and build activities. This directly supports lower implementation cost and reduced total cost of ownership.

The other options are not correct. A overstates the benefit; accelerators reduce effort, but they do not eliminate the need for integration knowledge. B contradicts the purpose of an accelerator, which is to minimize heavy custom coding. C is also incorrect because needing repeated manual remapping for every release would increase, not reduce, ownership cost.

So, the best description of the value of Guidewire pre-built integration solutions is that they offer partial reusable starting points and faster implementation through pre-configured content .

NEW QUESTION # 51

Which areas of the UI provide context-sensitive navigation links to the account functionality of PolicyCenter and the various pages of the account file?

- A. Tab Bar
- B. QuickJump Box
- C. Screen Area
- D. Workspace
- E. Info Bar
- F. Sidebar

Answer: A,F

Explanation:

Comprehensive and Detailed Explanation (250-300 words):

In Guidewire PolicyCenter, navigation is designed to provide both high-level access and context-sensitive navigation within a selected business object such as an account.

The Tab Bar (Option D) provides high-level navigation across major functional areas of the application, including Accounts, Policies, Claims, and Administration. It allows users to quickly access the account search and account-related workflows.

Once an account is opened, the Sidebar (Option F) becomes the primary context-sensitive navigation area. It displays links to specific pages within the account file, such as Account Summary, Contacts, Policies, and Activities. The sidebar updates dynamically based on the selected object, making it essential for navigating within the account context.

The remaining options do not provide context-sensitive account navigation. The Info Bar summarizes context, the QuickJump Box supports navigation shortcuts, the Workspace shows supplementary information, and the Screen Area displays page details.

NEW QUESTION # 52

Elaborate Requirements, Confirm Scope, Plan Project / Sprints, and Infrastructure Sizing are all part of this project phase?

- A. Stabilization
- B. Pre-Inception
- C. Development
- D. Inception

Answer: D

Explanation:

Comprehensive and Detailed Explanation:

According to the Guidewire SurePath methodology, these specific activities are the core objectives of the Inception Phase (Option D).

* Confirm Scope: The primary goal of Inception is to move from the high-level scope defined in Pre-Inception to a detailed, agreed-upon scope (Minimum Viable Product).

* Elaborate Requirements: The team conducts workshops (often called "Elaboration" sessions) to break down high-level requirements into detailed User Stories.

* Infrastructure Sizing: While initial estimates may happen earlier, the definitive infrastructure sizing (hardware, cloud resources) is finalized during Inception once the scope and architecture are understood.

* Plan Project / Sprints: Inception concludes with a "Conceptual Sprint Plan" or release schedule, mapping out which stories will be delivered in which sprint.

Why other options are incorrect:

* A. Development: This phase is for executing the plan (building and testing), not defining the scope or sizing the infrastructure.

* C. Pre-Inception: This phase is for preparation and mobilization (staffing the team, setting up logistics), but the detailed "Elaboration" and "Sizing" happen once the full team starts in Inception.

NEW QUESTION # 53

A Business Analyst (BA) is reviewing a user story and its acceptance criteria before development begins.

The acceptance criteria state, "The system should correctly process the claim transaction after the external payment gateway confirms the payment." Applying the INVEST principles for good user stories, which two principles are MOST directly relevant to the BA's concerns about this user story?

- A. Small
- B. Testable
- C. Valuable
- D. Negotiable
- E. Independent

- F. Estimable

Answer: B,F

Explanation:

The INVEST model (Independent, Negotiable, Valuable, Estimable, Small, Testable) is used to assess the quality of user stories. In the specific example provided, the phrase "correctly process" creates significant ambiguity, which primarily impacts two principles:

* Testable (F): A good user story must have acceptance criteria that provide a clear "Pass/Fail" result.

The word "correctly" is subjective and ambiguous. A Quality Analyst cannot write a specific test script or automated Gherkin scenario based on "correctly." They need to know the specific expected behaviors (e.g., "The Claim Status changes to 'Paid'" or "A Payment Activity is generated"). Without these specifics, the story is not testable.

* Estimable (D): For a developer to provide an accurate story point estimate (sizing), they must understand the scope of the work. The vague phrase "correctly process" hides the underlying complexity. Does "processing" involve just updating a status field (1 point), or does it involve generating a General Ledger transaction, sending a confirmation email, and creating a document (5 points)? Because the scope is undefined, the story is not estimable.

Why other options are less relevant:

* A. Independent: While the story mentions an "external payment gateway," which implies a system dependency, the primary drafting flaw highlighted in the question is the vagueness of the acceptance criteria. Independence usually refers to dependencies between other user stories in the backlog.

* E. Small: There is not enough information to judge the size of the story, but the ambiguity makes it impossible to size (Estimable) rather than explicitly "Too Big."

NEW QUESTION # 54

Story huddles are used to clarify functional requirement details and typically involve collaboration among which three required project team members?

- A. Quality Analysts
- B. Product Owners
- C. Business Analysts
- D. Developers
- E. Subject Matter Experts

Answer: A,C,D

NEW QUESTION # 55

.....

You can also use the Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam PDF format using smartphones, tablets, and laptops. Since the PDF format of real dumps questions is portable, you can access it from any place in free time. The Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam web-based practice exam can be easily taken from every browser and operating system without installing additional software. The desktop Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam practice exam software comes with all specs of the Guidewire InsuranceSuite-Analyst web-based version but it works offline only on Windows computer or laptop.
