UiPath Certified Professional Automation Business Analyst Professional v1.0 Sample Questions (Q24-Q29):

NEW QUESTION # 24

When executing test cases during the User Acceptance Testing phase of Automation Implementation and an unexpected scenario arises that was not covered in the initial plan, what should the Business Analyst do?

- A. The Business Analyst should escalate the new scenario to the project manager or the testing manager to get a solution instead of working with the automation development team.
- B. The Business Analyst should log the new scenario as a deviation, communicate it to the automation implementation team, and together they should decide on how to handle this new situation.
- C. The Business Analyst must handle this new situation independently, make necessary changes, and ensure that the automation performs as expected in this new scenario.
- D. The Business Analyst should ignore the new scenario as it was not initially included in the UAT plan and focus on the scenarios that were agreed upon.

Answer: B

Explanation:

During the User Acceptance Testing (UAT) phase, unforeseen scenarios are not uncommon. The Business Analyst (BA) plays a crucial role in ensuring that these scenarios are managed effectively to maintain the integrity and functionality of the automation.

Understand the Role of UAT:

UAT is designed to ensure that the developed automation aligns with the agreed-upon business requirements.

It involves validating both happy path and exception scenarios. Any new scenario not documented in the UAT plan needs to be addressed systematically.

Why Option B is Correct:

Logging the scenario as a deviation ensures transparency and accountability.

Collaborating with the implementation team allows the BA to leverage their technical expertise for a resolution.

This approach ensures that the scenario is evaluated, documented, and potentially included in future testing cycles.

Why Other Options Are Incorrect:

Option A: Handling the situation independently disregards team collaboration, potentially leading to gaps in understanding or misaligned fixes.

Option C: Escalating the issue to the project manager without involving the development team delays resolution and bypasses the experts directly responsible for the automation.

Option D: Ignoring the scenario undermines the purpose of UAT, risking the deployment of incomplete or non-functional automation.

Reference to UiPath Practices:

The PDD and UAT plans emphasize logging deviations and continuously updating documentation during UA.

Change management principles highlight the importance of documenting new requirements and involving the relevant teams.

By logging and addressing deviations collaboratively, the BA ensures the automation solution is robust, efficient, and aligned with business needs.

NEW QUESTION # 25

How are changes usually categorized in terms of implementation effort, which is calculated in days, in the Change Control Process of an automation project?

- **A. Low, Medium, or High and it's typically up to the company to decide on the number of days for each category.**
- B. Minor, Major, or Critical and it's usually the responsibility of the Project Manager to decide on the duration for these categories.
- C. Changes are usually quantified in terms of the manpower needed rather than the number of days it takes to implement.
- D. Easy, Moderate, or Complex and the company usually defines the timeframe for each of these categories.

Answer: A

Explanation:

In the context of UiPath's Change Control Process:

Categorization: Changes are categorized as Low, Medium, or High based on the time and resources required for implementation.

Low: Typically involves minor adjustments with minimal impact, requiring fewer resources and less time.

Medium: Changes that involve moderate effort, such as adjustments to existing automations.

High: Significant changes that require a longer duration, extensive testing, and resource involvement.

Effort Calculation: The company decides the duration for each category, e.g., Low (<2 days), Medium (2-5 days), High (>5 days).

Alignment with Change Management Principles: These categories ensure clear communication, effective planning, and prioritization during the change request and implementation stages.

NEW QUESTION # 26

Which of the following data is ingested by Insights?

- A. Job. Queues, Assets
- **B. Jobs. Queues. Robot Logs**
- C. Assets. Queues, Robot Logs
- D. Jobs. Assets, Robot Logs

Answer: B

Explanation:

UiPath Insights ingests data such as Jobs, Queues, and Robot Logs. This data is used to generate comprehensive analytics that help organizations monitor, measure, and optimize their robotic process automation (RPA) operations.
