질문 # 121

Which tag is required when importing the jQuery library?

- A. Script
- B. meta
- C. Body
- D. Section

정답: A

설명:

The<script>tag is required when importing the jQuery library into an HTML document.

* Including jQuery:

* Purpose: The<script>tag is used to embed or reference executable code (JavaScript).

* Example:

```
<script src="https://code.jquery.com/jquery-3.6.0.min.js"></script>
```

* Explanation:

* The<script>tag should be placed in the<head>or at the end of the<body>to ensure that the library is loaded before the scripts that depend on it.

질문 # 122

Which application programming interface (API) should a developer use to track devices by their IP address?

- A. History
- **B. Geolocation**
- C. File
- D. Document Object Model

정답: B

설명:

> "The Geolocation API is used to determine the physical location of a device. It typically uses IP address, Wi-Fi positioning, and GPS signals to approximate the user's location."

>

> It does not directly access the IP address but uses it behind the scenes in conjunction with other signals.

질문 # 123

Given the following JavaScript code:

```
```\njavascript\nvar n1 = 10;\nvar n2 = "20.39";\n```\n
```

Which function should a developer use to convert the content of the variable `n2` from a string to a number while keeping the decimal places?

- A. toUpperCase
- B. parseInt
- C. isNaN
- **D. parseFloat**

**정답: D**

**설명:**

> "parseFloat() parses a string and returns a floating-point number. Unlike parseInt(), it retains the decimal portion."

>

> Example:

```
```\njavascript\nparseFloat("20.39") // returns 20.39\n```\n
```

* parseInt() would return `20`

* isNaN() checks if a value is Not-a-Number

* toUpperCase() is for string case conversion

질문 # 124

What is a common technique on mobile web pages to ensure users can access all content if the mobile version is limiting?

- **A. A link to the full site**
- B. Navigation links requiring scrolling
- C. Targeted site content

- D. Access to multiple link layers

정답: A

설명:

Providing a link to the full site on a mobile web page is a common technique to ensure users can access all content if they find the mobile version limiting.

* Advantages:

* Access to Full Functionality: Users can switch to the desktop version if they need features not available on the mobile site.

* User Control: It gives users the choice to view the site in a layout they are more comfortable with.

* Other Options:

* A. Access to multiple link layers: This does not directly address user needs for full site access.

* B. Targeted site content: While important, it does not replace the need for a full site link.

* D. Navigation links requiring scrolling: This can worsen the user experience on mobile devices.

질문 # 125

A file named application, Appcache contains the following content:

Which attribute should a developer set to application. Appcache so the four files will be cached?

- A. The href attribute of the <Link> element
- B. The src attribute of the <script> element
- C. The srcset attribute of the <source> element
- D. The manifest attribute of the <html> element

정답: D

설명:

To specify a cache manifest file for an HTML document, the manifest attribute must be set in the <html> element. This attribute tells the browser to cache the files listed in the manifest for offline use.

* Cache Manifest:

* Purpose: Specifies resources that should be cached by the browser.

* Attribute: manifest is used in the <html> tag to link the cache manifest file.

* Example:

* Given the manifest file application.appcache:

```
CACHE MANIFEST
```

```
CACHE:
```

```
default.html
```

```
stylesheet.css
```

```
functions.js
```

```
logo.jpg
```

* HTML with the manifest attribute:

```
<html manifest="application.appcache">
```

```
</html>
```
