- B. Disable SSL and TLS on the host
- C. Enable the Windows firewall
- D. Delete any available application crash log files

正解：A

解説：
A valid step when troubleshooting sensor installation failure is to confirm all required services are running on the system. This can help identify if there are any issues with the sensor service, the Windows Management Instrumentation service, or the Windows Remote Management service, which are required for the sensor to function properly. The other options are either incorrect or not helpful for troubleshooting sensor installation failure.

What type of information is found in the Linux Sensors Dashboard?

- A. Hosts by Kernel Version, Shells spawned by Root, Wget/Curl Usage
- B. Hidden File execution, Execution of file from the trash, Versions Running with Computer Names
- C. Versions running, Directory Made Invisible to Spotlight, Logging/Auditing Referenced, Viewed, or Modified
- D. Private Information Accessed, Archiving Tools ?Exfil, Files Made Executable

正解：A

解説：

that have Falcon sensors installed.
You can use this dashboard to monitor the health and activity of your Linux hosts, such as their kernel versions, root shell usage, network communication, detections, and preventions.

質問 # 227
What are custom alerts based on?

- A. Custom event based triggers
- B. Predefined alert templates
- C. User defined Splunk queries
- D. Custom workflows

正解：B

解説：
Scheduling a Custom Alert for your environment consists of three steps: choosing the template you'd like to configure, previewing the search results, then scheduling the alert. Use Custom Alerts to configure email alerts using predefined templates so you're notified about specific activity in your environment. When an alert runs and finds results, it sends an email to specified recipients instead of generating a new detection. Custom Alerts let you set up email alerts based on predefined templates that cover a wide range of topics including Real Time Response session initiation, host containment, OS security settings, and more that are not yet covered by notification workflows.

質問 # 228
Which of the following uses Regex to create a detection or take a preventative action?

- A. Custom IOA
- B. Machine Learning Exclusion
- C. Sensor Visibility Exclusion
- D. Custom IOC

正解：A

解説：
The option that uses regex to create a detection or take a preventative action is Custom IOA. A Custom IOA (indicator of attack) allows you to define custom rules for detecting or preventing suspicious behavior based on process execution, file write, network connection, or registry events. You can use regex syntax to create a Custom IOA rule that matches the event data that you want to monitor or block.
