In today's society, many enterprises require their employees to have a professional UiPath-AAA v1 certification. It is true that related skills serve as common tools frequently used all over the world, so we can realize that how important an UiPath-AAA v1 certification is, also understand the importance of having a good knowledge of it. The rigorous world force us to develop ourselves, thus we can't let the opportunities slip away. Being more suitable for our customers the UiPath-AAA v1 Torrent question compiled by our company can help you improve your competitiveness in job seeking, and UiPath-AAA v1 exam training can help you update with times simultaneously.

UiPath Certified Professional Agentic Automation Associate (UiAAA) Sample Questions (Q55-Q60):

NEW QUESTION # 55

A developer is implementing a few-shot structured prompt for an email classification task. The prompt includes examples of email subjects labeled with their respective classifications, such as "Spam" or "Work." What is the most important aspect to consider when selecting examples for the prompt?

- A. Use random and unrelated examples to test the prompt's robustness.
- B. Include examples with intentionally incorrect labels to improve training.
- C. Always use more than 10 examples, regardless of task complexity.
- **D. Choose examples that are diverse, relevant, and typical of the task's expected input.**

Answer: D

Explanation:

The correct answer is C- the most critical aspect of designing a few-shot prompt in UiPath's LLM-driven agent framework is selecting examples that are diverse, representative, and relevant to the actual data the agent will encounter in production.

In a few-shot structured prompt, examples are used to demonstrate a pattern the model should follow.

UiPath recommends:

* Using realistic examples from actual user inputs or support tickets

* Covering edge cases or variations in phrasing and tone

* Matching the desired output structure exactly (e.g., Input: ..., Output: ...) These patterns help the LLM infer the task correctly and maintain consistency, especially when processing unstructured inputs like email subjects.

Option A is incorrect - introducing incorrect labels degrades performance and adds confusion.

B is wrong - the number of examples depends on the task complexity and token budget. Sometimes 3-5 is ideal.

D undermines task alignment - random examples reduce accuracy and coherence.

UiPath's Prompt Engineering best practices prioritize grounded, contextually rich inputs, particularly when automating classification tasks like spam detection, triage, or intent recognition. High-quality, task-aligned examples lead to more reliable, human-like agents.

NEW QUESTION # 56

What type of agents can be invoked using the 'Start and wait for external agent' feature in UiPath Maestro?

- A. Agents that do not require any input or output variables.
- B. External agents like Salesforce or ServiceNow.
- **C. Agents configured exclusively within the same project.**
- D. Only UiPath Orchestrator robots.

Answer: C

Explanation:

C is the correct answer - the "Start and wait for external agent" feature in UiPath Maestro is used to invoke another agent that has been configured within the same project or automation environment.

This enables:

* Agent-to-agent chaining

* Modular design where complex tasks are offloaded to specialized agents

* Return of results or outputs, once the external agent completes its task Agents must be:

* Properly configured

* Input/output ready

* Available within the orchestration context of the same solution

Option A is incorrect - this feature is about agents, not robots.

B is wrong - external platforms like Salesforce are accessed via connectors, not as agents.

D is false - input/output parameters can and often should be used between agents.

NEW QUESTION # 57

How long does a key-value pair stored in Agent Memory remain available before it expires by default?

- A. 12 months
- B. 3 months
- C. 6 months
- D. Until the agent version is updated, after which key-value pairs are automatically cleared

Answer: A

Explanation:

C is correct - according to UiPath documentation, key-value pairs stored in Agent Memory persist for 12 months by default.

Agent Memory is a persistent storage layer allowing agents to:

- * Recall decisions or context across runs
- * Store user preferences, status, or temporary flags
- * Maintain statefulness without relying on external databases

This capability is especially useful for:

- * Omnichannel customer interactions
- * Preference-aware recommendations
- * Tracking previously taken actions for continuity

Although memory storage is long-lasting (12 months), developers can:

- * Manually reset or expire entries
- * Use different memory scopes (e.g., per-user, per-agent)
- * Design memory-aware flows for personalization

Option D is incorrect - memory is not auto-cleared on version updates.

A and B understate the retention policy - default expiration is clearly documented as 12 months unless changed manually.

Agent Memory is a powerful enabler of context-rich, stateful automations, especially for conversational or ongoing interactions.

NEW QUESTION # 58

In a UiPath Agent, which statement best captures the essential purpose of a system prompt?

- A. It is used only to preload enterprise context and never influences the agent's decision to call tools.
- B. It mainly lists output-formatting tags the agent must include, leaving role and goal definition to the user prompt.
- C. It must enumerate every possible dialogue path the agent could encounter so the model can simply pick a preset answer.
- D. It declares the agent's role, overall goal, and operating constraints, and tells the agent when to invoke tools or escalate tasks to a human reviewer.

Answer: D

Explanation:

A is correct - in UiPath's agent framework, a system prompt serves as the agent's core grounding mechanism. It is responsible for:

- * Defining the agent's identity ("You are an IT support assistant...")
- * Outlining its goal ("Your job is to classify, triage, and resolve tickets...")
- * Setting operational boundaries and behaviors
- * Specifying when to escalate to a human or use tools

This aligns with UiPath's Context Grounding strategy, which separates system prompts, user prompts, and tools orchestration. The system prompt provides persistent context, guiding the LLM's behavior consistently across user interactions and actions.

Option B downplays its influence - which is critical.

C reduces it to output formatting, which is only a small part.

D is unrealistic - LLMs generalize; they don't require enumerating every path.

Correct system prompting ensures safe, consistent, goal-aligned behavior from the agent across dynamic scenarios.

NEW QUESTION # 59

What is one of the key benefits of providing RAG as a service to UiPath generative AI experiences?

- A. It exclusively provides access to historical data sources without supporting real-time updates.
- **B. It reduces the risk of hallucination by referencing ground truth data stores.**
- C. It directly increases the LLM context window size without any interaction with knowledge bases.
- D. It eliminates the need for knowledge bases by integrating all proprietary data directly into generative applications.

Answer: B

Explanation:

The correct answer is A - RAG (Retrieval-Augmented Generation) enhances generative AI experiences in UiPath by providing grounded, context-relevant data at runtime, which significantly reduces hallucinations.

Here's how it works:

When an LLM receives a query, RAG pulls relevant documents or snippets from enterprise data sources (like knowledge bases, SharePoint, Confluence).

This content is passed to the LLM as context, enabling the model to respond using ground truth, not generic or fabricated knowledge.

UiPath's GenAI platform and agentic agents use RAG to:

Enrich prompt context

Drive document-based answers

Support fact-checked decisions in customer service, HR, IT, etc.

Option B is false - RAG doesn't alter the LLM's context window.

C is incorrect - RAG works because it queries live knowledge bases.

D is wrong - RAG supports real-time dynamic data, not just historical.
