CYTOLOGY, PAP SMEAR EXAMINATION

SPECIMEN: ThinPrep

Cytologic and Molecular Results

PAP DIAGNOSIS:
ATYPICAL SQUAMOUS CELLS OF UNDETERMINED SIGNIFICANCE (ASC-US)

MOLECULAR RESULTS:
HIGH RISK HPV RESULT: *****DETECTED*****
CHLAMYDIA TRACHOMATIS RESULTS: not detected
NEISSERIA GONORRHOEAE RESULTS: not detected
TRICHOMONAS VAGINALIS RESULTS: not detected

Additional Cytologic Findings
SPECIMEN ADEQUACY: Satisfactory for evaluation.
Endocervical/transformation zone component present

The PAP smear is a screening test for cervical cancer with an inherent and irreducible false negative rate, the consequences of which may be minimized by obtaining regular annual PAP smears. Molecular testing was performed with either the APTIMA HPV Assay kit for the 14 high-risk types of HPV 16, 18, 31, 33, 35, 39, 45, 51, 52, 56, 58, 59, 66 and 68 (does not discriminate between the 14 high-risk types), APTIMA HPV 16 18/45 Genotype Assay kit, APTIMA Combo 2 (CT/GC) Assay kit, APTIMA Trichomonas vaginalis Assay kit, APTIMA Bacterial Vaginosis Assay kit, APTIMA CV/TV Assay kit for the detection of Candida Species, Candida Glabrata and Trichomonas, and/or the APTIMA Herpes Simplex virus types 1 & 2 Assay kit. All Assays have been FDA approved and are performed according to the manufacturers specifications. The laboratory is regulated under CLIA as qualified to perform high-complexity testing. This test is used for clinical purposes. It should not be regarded as investigational or for research.

Ping Identity PAP-001 Training Online - Valid PAP-001 Study Plan

We provide PAP-001 Exam Torrent which are of high quality and can boost high passing rate and hit rate. Our passing rate is 99% and thus you can reassure yourself to buy our product and enjoy the benefits brought by our PAP-001 exam materials. Our product is efficient and can help you master the Certified Professional - PingAccess guide torrent in a short time and save your energy. The product we provide is compiled by experts and approved by the professionals who boost profound experiences.

Ping Identity Certified Professional - PingAccess Sample Questions (Q43-Q48):

NEW QUESTION # 43

A PingAccess API deployment requires multiple Access Token Managers to maintain compliance with customer requirements. Which feature must be set on the Token Provider configuration?

- A. Subject Attribute Name
- **B. Send Audience**
- C. Use Token Introspection Endpoint
- D. Client Secret

Answer: B

Explanation:

When using multiple Access Token Managers, the Send Audience option ensures that tokens are scoped properly and validated against the intended resource/application.

Exact Extract:

"Enable Send Audience in the token provider configuration to support environments with multiple Access Token Managers and enforce correct audience restrictions."

* Option A (Subject Attribute Name) is unrelated - it maps user identity but not token manager selection.

* Option B (Send Audience) is correct - required when multiple ATMs are in use.

* Option C (Use Token Introspection Endpoint) is optional and depends on deployment, not mandatory for multiple ATMs.

* Option D (Client Secret) is part of OAuth client credentials, not specific to multiple ATMs.

Reference: PingAccess Administration Guide - Access Token Management

NEW QUESTION # 44

What is the purpose of the `pa.operational.mode` configuration setting?

- A. To determine if a cluster node is enabled or disabled
- B. To determine if a server should participate in cluster replication
- **C. To determine the role the server performs in a cluster**
- D. To determine whether a server is a development or production server

Answer: C

Explanation:

The `pa.operational.mode` property in `run.properties` defines the role of the node in a PingAccess deployment (e.

g.,STANDALONE,CLUSTERED_CONSOLE,CLUSTERED_CONSOLE_REPLICA,ENGINE).

Exact Extract:

"Thepa.operational.modeproperty determines the role of the server in the cluster, such as standalone, console, console replica, or engine."

- * Option A is incorrect - replication is implicit in certain roles, not controlled directly.
- * Option B is correct - the setting specifies whether the node is admin console, replica, or engine.
- * Option C is incorrect - development vs production is not a function of this setting.
- * Option D is incorrect - it does not enable/disable nodes.

Reference:PingAccess Administration Guide -run.properties

NEW QUESTION # 45

An administrator needs to use attributes that are not currently available in theIdentity Mapping Attribute Namedropdown. Which action should the administrator take?

- **A. Request that the additional attributes be added by the token provider administrator**
- B. Create a Rewrite Content rule for the additional attributes
- C. Create a Web Session Attribute rule for the additional attributes
- D. Request that the additional attributes be added by the web developer

Answer: A

Explanation:

Identity Mapping in PingAccess relies on attributes provided by thetoken provider(e.g., PingFederate, OIDC provider). If the desired attributes are not present in the dropdown, it means they are not being provided in the token or userinfo response.

Exact Extract:

"Attributes available in identity mappings are those provided in the web session by the token provider. If attributes are missing, they must be added to the token by the identity provider."

- * Option A is correct - the token provider administrator must configure the IdP to include the additional attributes.
- * Option B is incorrect - rewrite rules modify content but do not supply new identity attributes.
- * Option C is incorrect - developers cannot directly add identity attributes; they must come from the IdP.
- * Option D is incorrect - Web Session Attribute rules only evaluate available attributes; they don't create new ones.

Reference:PingAccess Administration Guide -Identity Mapping and Attributes

NEW QUESTION # 46

Which element in thelog4j2.xmlfile must be modified to change the log level in PingAccess?

- **A. Logger**
- B. Appenders
- C. RollingFile
- D. AsyncLogger

Answer: A

Explanation:

In Log4j2, theLoggerelement controls the log level (INFO,DEBUG,ERROR, etc.) for specific packages or classes.

Exact Extract:

"To modify logging levels, edit the<Logger>element inlog4j2.xmland change the level attribute."

- * Option A (AsyncLogger)is a performance optimization, not for changing levels.
- * Option B (RollingFile)defines file rotation, not log levels.
- * Option C (Logger)is correct - this is where log levels are defined.
- * Option D (Appenders)define output destinations, not severity levels.

Reference:PingAccess Administration Guide -Log Configuration

NEW QUESTION # 47

All style sheets should be accessible to all users without authentication across all applications. Which configuration option should the administrator use?

- A. Define a Default Availability Profile of on-demand for the resource.
- B. Define Global Unprotected Resources for the resource.
- C. Define Authentication Challenge Policy of none for the resource.
- D. Define a Protocol Source for the resource.

Answer: B

Explanation:

The correct way to ensure resources such as CSS files, images, or JavaScript are accessible without authentication across all applications is to configure Global Unprotected Resources.

Exact Extract:

"Global unprotected resources define resources that do not require authentication and are accessible to all clients across applications."

* Option A is incorrect; Protocol Sources define back-end host connections, not authentication.

* Option B would apply only per-resource, not across all applications.

* Option C is correct - Global Unprotected Resources are designed for this exact purpose.

* Option D(Availability Profile) is related to application health checks and availability, not authentication.

Reference: PingAccess Administration Guide - Global Unprotected Resources
