HPE7-A06 Valid Exam Blueprint, Valid HPE7-A06 Exam Cost

Once you purchase the HPE7-A06 exam dumps from PrepAwayPDF you can use it in three forms HP PDF Questions format, web-based software, and desktop HP HPE7-A06 practice test. Candidates can use HPE Campus Access Switching Expert Written Exam pdf questions file on their mobiles, laptop tablets, or any other device. Candidates can install the HPE7-A06 Practice Exam software on their desktops to attempt the HP HPE7-A06 practice test even when they are offline.

HPE Campus Access Switching Expert Written Exam Sample Questions (Q76-Q81):

NEW QUESTION # 76
You see the output unknown the first time you in the command, but the next time you see the following information displayed.
What aresome things you could took at in the switch to troubleshootthe issue? (Select two.)

- A. diag interface 1/VX transceiver all
- B. diag interface transceiver al
- C. diag cable-diagnostic 1/1/X
- D. diag cable 1/1/X
- E. diag 1/1/X transceiver all

Answer: C,E

Explanation:
The question involves troubleshooting an issue where the command output is initially unknown, but subsequent executions show diagnostic information for an interface (1/1/X). The task is to identify appropriate diagnostic commands to troubleshoot the issue.
* Analysis of Options:

* Option A (diag interface transceiver al):Incorrect syntax; "al" is not a valid parameter.
* Option B (diag interface 1/VX transceiver all):Incorrect syntax; "1/VX" is not a valid interface format.
* Option C (diag cable-diagnostic 1/1/X):Correct. This command runs a cable diagnostic test (TDR) on interface 1/1/X to check for cable faults, such as opens or shorts.
* Option D (diag cable 1/1/X):Incorrect; "diag cable" is not a valid AOS-CX command.
* Option E (diag 1/1/X transceiver all):Correct. This command displays detailed transceiver information, including status, errors, and signal quality, useful for diagnosing interface issues.
* Why C and E are Correct:The diag cable-diagnostic 1/1/X command is used to perform TDR tests to identify cable faults, which could cause connectivity issues. The diag 1/1/X transceiver all command provides detailed transceiver diagnostics, such as power levels, errors, or hardware issues, helping pinpoint problems with the interface or connected device. These commands align with AOS-CX troubleshooting workflows for physical layer issues.
* Relevance to Certification Objectives:
* Troubleshooting (10%):Involves using diagnostic commands to troubleshoot campus network issues.
* Connectivity (9%):Includes identifying problem areas in device deployment, such as cabling or transceiver issues.
References:
HPE Aruba Networking AOS-CX Configuration Guide: Diagnostic Commands, covering cable diagnostics and transceiver diagnostics.

HPE Aruba Networking Technical Documentation: AOS-CX Troubleshooting, explaining diagnostic command usage.

NEW QUESTION # 77
A Python developer could not modify the VLAN database on an AOS-CX switch through the REST API.
Which settings should the developer check first? (Choose two.)

- A. SSH settings
- B. REST API settings
- C. SNMP settings
- D. local-user settings
- E. HTTPS settings

Answer: B,E

Explanation:
The REST API on AOS-CX switches requires HTTPS to be enabled and properly configured. The developer should also verify that the REST API settings allow modification actions (such as POST/PUT/DELETE) and are not restricted to read-only. SSH and SNMP settings are unrelated, and local-user settings may be relevant for permissions, but the first things to check are HTTPS and REST API configuration.

NEW QUESTION # 78
You have configured BGP peering from a CX 8325 switch to a third-party router. The remote router is reachable via ping but you are not able to get the configuration to an established state.
Based on the BGP debug:
What is preventing the BGP neighbor state from becoming the established state?

- A. The remote router is configured with router-id 10.1.0.4
- B. The remote router has no router-id configured
- C. The remote router is not negotiating with the local router
- D. The remote router is configured with router-id 10.1.0.2

Answer: B

Explanation:
The debug output shows the Remote BGP ID as 0.0.0.0, which indicates that the remote router has no router-id configured. BGP requires a valid router-id (a non-zero IP address) for session establishment. Without it, the BGP session cannot progress to the Established state.

NEW QUESTION # 79

A customer is experiencing problems with BGP on their AOS-CX network. The users cannot access specific resources on the network, even though they have been assigned the appropriate roles and permissions.
What is the most likely cause of the problem?

- A. The GBP tags are not being applied correctly to the user's traffic.
- B. The HPE Aruba Networking ClearPass configuration is incorrect.
- C. The GBP database is corrupted.
- D. The users are not being assigned the correct GBP classes.

Answer: A

Explanation:
In AOS-CX, Group-Based Policy (GBP) relies on correct tagging of user traffic. If GBP tags are not applied properly, even users with the correct roles and permissions will not be able to access the intended network resources. This makes incorrect tag application the most likely cause of the BGP-related issue described.

NEW QUESTION # 80
You are implementing a network using Zero-Touch Provisioning (ZTP) to deploy the gateways.
What are two requirements for the connection to the switchport? (Choose two.)

- A. Jumbo frames must be enabled
- B. You must use port GE 0/0/1 on the gateway
- C. The gateway needs to be provided an IP address through DHCP
- D. The switchport needs to be untagged with Internet access
- E. The switchport needs to be configured with IP address 172.16.0.254

Answer: C,D

Explanation:
For Zero-Touch Provisioning (ZTP), the gateway must connect to a switchport with untagged Internet access so it can reach Aruba Central or the provisioning server. Additionally, the gateway requires an IP address via DHCP, which provides the necessary network configuration (IP, DNS, default gateway, and optionally ZTP server URL). No specific physical port, static IP, or jumbo frame configuration is required.

NEW QUESTION # 81
......

PrepAwayPDF has a professional team of IT experts and certified trainers who written the HPE7-A06 exam questions and valid exam prep according to the actual test. You can download the HP free demo before you purchase. If you bought our HPE7-A06 Exam PDF, you will be allowed to free update your dumps one-year. You just need to spend one or two days to practice questions and remember answers.
